MANUAL HANDLING IN HEALTH AND SOCIAL CARE, SECOND EDITION

AN A-Z OF LAW AND PRACTICE

Jessica Kingsley Publishers *Manual Handling in Health and Social Care is written for all those involved in the manual handling of adults or children - including those carrying it out, assessors, managers and commissioners. It lays out the current legal requirements in a non-technical way and includes case studies illustrating the law applied in practice, across health, social care and sometimes educational settings. The book applies to England, Scotland, Wales and Northern Ireland. An extended introduction sets out challenges, past, present and future, including safety, balancing risk with duties to meet*

people's needs, human rights, avoidance of blanket policies, mental capacity, safeguarding, the limited resources of statutory services and single-handed care. It also considers some of the legal implications of increased use of technology (including remote assessment), as well as the "mechanisation" of care and its application to manual handling. The main part of the book is in the form of an A-Z guide, providing quick access to relevant legislation and common law (negligence) rules applying to personal injury cases. It covers also, extensively, judicial review legal challenges to decisions, when people and their families disagree with manual handling decisions that have been made. In addition, relevant ombudsman cases are included. The book will be essential reference for staff and managers in health and social care settings, students, legal professionals and all those working to ensure good practice and compliance with the law.

THE ROLE OF SMALL SATELLITES IN NASA AND NOAA EARTH OBSERVATION PROGRAMS

National Academies Press Remote observations of Earth from space serve an extraordinarily broad range of purposes, resulting in extraordinary demands on those at the National Aeronautics and Space Administration (NASA), the National Oceanic and Atmospheric Administration (NOAA), and elsewhere who must decide how to execute them. In research, Earth observations promise large volumes of data to a variety of disciplines with differing needs for measurement type, simultaneity, continuity, and long-term instrument stability. Operational needs, such as weather forecasting, add a distinct set of requirements for continual and highly reliable monitoring of global conditions. *The Role of Small Satellites in NASA and NOAA Earth Observation Programs* confronts these diverse requirements and assesses how they might be met by small satellites. In the past, the preferred architecture for most NASA and NOAA missions was a single large spacecraft platform containing a sophisticated suite of instruments. But the recognition in other areas of space research that cost-effectiveness, flexibility, and robustness may be enhanced by using small spacecraft has raised questions about this philosophy of Earth observation. For example, NASA has already abandoned its original plan for a follow-on series of major platforms in its Earth Observing System. This study finds that small spacecraft can play an important role in Earth observation programs, providing to this field some of the expected benefits that are normally associated with such programs, such as rapid development and lower individual mission cost. It also identifies some of the programmatic and technical challenges associated with a mission composed of small spacecraft, as well as reasons why more traditional, larger platforms might still be preferred. The reasonable conclusion is that a systems-level examination is required to determine the optimum architecture for a given scientific and/or operational objective. The implied new challenge is for NASA and NOAA to find intra- and interagency planning mechanisms that can achieve the most appropriate and cost-effective balance among their various requirements.
