thinking about parenting and its conventions” (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you’re like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley’s sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You’ll be laughing and learning at the same time. **The Complete Book of Ford Mustang Every Model Since 1964-1/2 Complete Book** *The Complete Book of Ford Mustang, 4th Edition* details the development, technical specifications, and history of America's original pony car, now updated to cover cars through the 2021 model year. **4.6L & 5.4L Ford Engines How to Rebuild - Revised Edition** *CarTech Inc* Since 1991, the popular and highly modifiable Ford 4.6-liter has become a modern-day V-8 phenomenon, powering everything from Ford Mustangs to hand-built hot rods and the 5.4-liter has powered trucks, SUVs, the Shelby GT500, and more. Since that time, authors X. J. and Dorothy M. Kennedy have won praise for their friendly tone and their view, apparent on every page of the text, that writing is the “usually surprising, often rewarding art of thinking while working with language.” More recently, experienced teacher and writer Marcia F. Muth joined the author team, adding more practical advice to help all students — even those underprepared for college work — become successful academic writers. While retaining the highly praised “Kennedy touch,” *The Bedford Guide* continues to evolve to meet classroom needs. Norton & Company* Tech giants and automakers have been teaching robots to drive. Robot-controlled cars have already logged millions of miles. These technological marvels promise cleaner air, smoother traffic, and tens of thousands of lives saved. But even if robots turn into responsible drivers, are we ready to be a nation of passengers? In *Are We There Yet?*, Dan Albert combines historical scholarship with personal narrative to explore how car culture has suffused America’s DNA. The plain, old-fashioned, human-driven car built our economy, won our wars, and shaped our democratic creed as it moved us about. Driver’s ed made teenagers into citizens; auto repair made boys into men. Crusades against the automobile are nothing new. Its arrival sparked battles over street space, pitting the masses against the millionaires who terrorized pedestrians. When the masses got cars of their own, they learned to love driving too. During World War II, Washington nationalized Detroit and postwar Americans embraced car and country as if they were one. Then came 1960s environmentalism and the energy crises of the 1970s. Many predicted, even welcomed, the death of the automobile. But many more rose to its defense. They embraced trucker culture and took to Citizen Band radios, demanding enough gas to keep their big boats afloat. Since the 1980s, the car culture has triumphed and we now drive more miles than ever before. Have we reached the end of the road this time? Fewer young people are learning to drive. Ride hailing is replacing car buying, and with electrification a long and noble tradition of amateur car repair—to say nothing of the visceral sound of gasoline exploding inside a big V8—will come to an end. When a robot takes over the driver’s seat, what’s to become of us? *Are We There Yet?* carries us from muddy tracks to superhighways, from horseless buggies to driverless electric vehicles. Like any good road trip, it’s an adventure so fun you don’t even notice how much you’ve learned along the way. **The Ford SOHC Pinto and Sierra Cosworth DOHC Engines High-performance Manual** *Veloce Publishing Ltd* Expert practical advice from an experienced race engine builder on how to build a high-performance version of Ford's naturally aspirated 4-cylinder 1600, 1800 & 2000cc Pinto engine which has been used in Ford's most popular cars (*Escort, Capri, Cortina & Sierra - Ford/Mercury Capri, Pinto,*

Bobcat in USA) over many years. When Ford launched the Mustang, it created an automotive revolution. Award-winning designer and stylist Gale Halderman was at the epicenter of the action at Ford, and, in fact, his initial design sketch formed the basis of the new Mustang. He reveals his involvement in the project as well as telling the entire story of the design and development of the Mustang. Authors and Mustang enthusiasts James Dinsmore and James Halderman go beyond the front doors at Ford into the design center, testing grounds, and Ford facilities to get the real, unvarnished story. Gale Halderman offers a unique behind-the-scenes perspective and firsthand account of the inception, design, development, and production of the original Mustang. With stinging losses from the Edsel fresh in minds at Ford, the Mustang project was an uphill battle from day one. Lee Iacocca and his assembled team had a herculean task to convince Henry Ford II to take a risk on a new concept of automobile, but with the help of Hal Sperlich's detailed market research, the project received the green light. Henry Ford II made it clear that jobs were on the line, including Iacocca's, if it failed. The process of taking a car from sketch to clay model to prototype to preproduction and finally finished model is retraced in insightful detail. During the process, many fascinating experimental cars, such as the Mustang I two-seater, Mustang II prototype, Mustang Allegro, and Shorty, were built. But eventually the Mustang, based on the existing Ford Falcon, received the nod for final production. In a gala event, it was unveiled at the 1964 World's Fair in New York. The Mustang received public accolades and critical acclaim, and soon it became a runaway hit. After the initial success, Ford designers and Gale Halderman designed and developed the first fastback Mustangs to compliment the coupes. The classic Mustang muscle cars to follow, including the GT, Mach 1, and others, are profiled as well. The Mustang changed automotive history and ushered in the pony car era as a nimble, powerful, and elegantly styled sports coupe. But it could so easily have stumbled and wound up on the scrap pile of failed new projects. This is the remarkable and dramatic story of how the Mustang came to life, the demanding design and development process, and, ultimately, the triumph of the iconic American car. **The book of the Lamborghini Murciélago** Veloce Publishing Ltd The wedge-shaped V12 Lamborghini flagships were always spectacular - in shape, sound and performance.
