When Pontiac created the original muscle car—the GTO—it reshaped the automotive world like a four-inch piston going through a three-inch cylinder bore. Everything changed the moment John Zachery DeLorean and his crew of hot-rodding miscreants bolted a big engine into a smaller car and created the 1964 GTO. Make no mistake: DeLorean and his partners in crime were genuine outlaws. The

GTO broke so many of General Motors' corporate rules that the people responsible should have been fired. And they would have been, except the car was a hit. The Complete Book of Pontiac GTO explores every iteration of the first car created specifically for baby boomers. With rare photography from the archives of Hot Rod and Motor Trend magazines, this book is the complete resource for fans of the world's first muscle car. **California Style Manual A Handbook of Legal Style for California Courts and Lawyers : Based on California Style Manual Car and Driver Road & Track Ward's Automotive Yearbook** Includes advertising matter. **Popular Mechanics** Popular Mechanics inspires, instructs and influences readers to help them master the modern world. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-

duty vehicles.
