AUSTERITY AND THE REMAKING OF EUROPEAN EDUCATION

Bloomsbury Publishing **Austerity and the Remaking of European Education** offers historically and empirically grounded accounts of national educational formations in Europe, at a specific time in their reshaping through encounters with global policy frameworks, and social and economic developments. The authors explore these issues in the context of different pressures that impact on European education systems - from the constraints established by the European Central Bank and the European Commission across Southern Europe, to the 2008 financial crisis and the increased migration. The book provides a rigorous theoretical approach to European and national policies, combined with detailed analyses of national educational contexts in England, France, Greece, Hungary and Sweden. These in-depth studies identify major issues of national education policymaking, and explore the complexities of global/national relationships. The economic crisis, the rise of the Left in Greece and of the populist Right in many countries in Europe, questions of cultural and religious diversity, tensions between marketization and inclusion are all brought into focus, offering findings that are of great interest to researchers of education policy, politics and sociology of education alike. In the final section of the book, the authors explore policy alternatives, as embodied in the activities of both governments and non-state actors, such as trade unions and social movements.

HOW TOBACCO SMOKE CAUSES DISEASE

THE BIOLOGY AND BEHAVIORAL BASIS FOR SMOKING-ATTRIBUTABLE DISEASE : A REPORT OF THE SURGEON GENERAL

U.S. Government Printing Office **This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important**

because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.
