# Development and Demonstration of a Class 8 Propane-powered Truck

**A 261 kW(350hp) spark-ignited, turbo-charged and aftercooled Cummins 'Big Cam' propane engine was developed and tested for class 8 truck application. Two propane engines were operated in line-haul service for a total of 33 months and almost 350,000 kilometres (217,480 miles). A diesel-powered tractor, in similar service, was monitored for comparison. Fuel economy, oil consumption, maintenance, drivers' comments, and engine refinements were fully documented. Propane fuel economy averaged 94 L/100 km (3.0 mpg), relative to 45 L/100 km (6.3 mpg) with the diesel. Overall reliability was good and driver acceptance excellent; however, further refinements, especially in the turbocharger, ignition, and cooling system, are required to compete with the modern diesel. For the covering abstract of the Conference see IRRD Abstract No. 807661.**

## Custom Semi

**Motorbooks International In chapters that range from solo drivers, families in trucking, and whole customized fleets to the finest nitty-gritty and cutting-edge elements of semi truck customization, this book offers a close-up look at examples of custom semis. Includes before-and-after photos of re-customized trucks; motifs in graphics and design.**
