## Assessment of Intellectual Functioning

Springer Science & Business Media This fully updated, comprehensive text examines the assessment of intellectual abilities in children and adults. Chapters emphasize the rationale and techniques for measuring intellectual function in educational, clinical, and other organizational settings. The author includes detailed descriptions of the most widely used procedures for administering, scoring, and interpreting individual and group intelligence tests. This second edition features additional material on testing the handicapped, individual and group differences in mental abilities, theories and issues in the assessment of mental abilities, and new tests for measuring intelligence and related abilities.

## Handbook of Item Response Theory

### Volume 3: Applications

[CRC Press Drawing on the work of internationally acclaimed experts in the field, Handbook of Item Response Theory, Volume 3: Applications presents applications of item response theory to practical testing problems. While item response theory may be known primarily for its advances in theoretical modeling of responses to test items, equal progress has been made in its providing innovative solutions to daily testing problems. This third volume in a three-volume set highlights the major applications. Specifically, this volume covers applications to test item calibration, item analysis, model fit checking, test-score interpretation, optimal test design, adaptive testing, standard setting, and forensic analyses of response data. It describes advances in testing in areas such as large-scale educational assessment, psychological testing, health measurement, and measurement of change. In addition, it extensively reviews computer programs available to run any of the models and applications in Volume One and Three. Features Includes contributions from internationally acclaimed experts with a history of advancing applications of item response theory Provides extensive cross-referencing and common notation across all chapters in this three-volume set Underscores the importance of treating each application in a statistically rigorous way Reviews major computer programs for item response theory analyses and applications. Wim J. van der Linden is a distinguished scientist and director of research and innovation at Pacific Metrics Corporation. Dr. van der Linden is also a professor emeritus of measurement and data analysis at the University of Twente. His research interests include test theory, adaptive testing, optimal test assembly, parameter linking, test equating, and response-time modeling as well as decision theory and its applications to problems of educational decision making.](#)
