ASK THE SALES COACH-PRACTICAL ANSWERS TO THE QUESTIONS SALES PEOPLE ASK MOST

B2B Sales Connections Inc. Contrary to the popular belief, sales people don't rely on "the gift of the gab" to be successful. Actually, the opposite is true. The best sales professionals spend far more time asking and listening than they do talking and selling. They ask questions of their customers; they ask questions of their colleagues, and they ask questions of their managers. If Oxford defines curiosity as the strong desire to know or learn something, then by that definition, sales people are curious by nature. In fact, that's how sales professionals learn to be professional in the first place. This is a collection of practical answers to questions sales people ask most. Written by Susan A. Enns, a professional sales coach with a proven track record of sales excellence over her 30 plus year career. Her accomplishments include consecutively being the top sales rep in Canada, managing the top sales branch, and achieving outstanding sales growth in a national channel sales organization. She has written several books about sales and sales management and has created numerous automated sales tools. Her work has been published in several locations numerous times and has sold on five separate continents. As such, over the years, Susan has been asked many questions by many sales people. After a while, she saw that sales people, regardless of their experience, the products they sell, the industries in which they operate, or the countries where they sell, all share similar curiosities. In other words, although the wording may be different when asked in an email or when asked in person, sales people all ask the same questions, the most common of which are answered in this ebook. As the old saying goes, the only stupid questions are the ones unasked. As a sales professional, you should never be afraid to "Ask the Sales Coach" because you will learn so much from the answers! - "Susan really knows the selling world. She's honest, articulate, bright, giving, highly competent, personable and a top professional. Welcome her. It's the right thing to do." - "Our company hired Susan as our sales coach. She has helped me make more appointments, close more deals and make more money. The 3 most important concepts in sales. I would recommend any sales force hire her to help boost business sales". - "Susan ...understands the sales process intimately and is able to create a management process around it that drives sales people to accomplish their goals." - "Susan knows her stuff. She brings many years of great sales experience and success to anyone who wished to improve their skills in sales. She is very personable, and is not afraid to tell it like it is. I would recommend anyone (and I have) to Susan, her website, her books if you want to become a better sales person." - "Thanks for the training... I made my quota this year in May!"

INTRODUCTION TO JAVA AND SOFTWARE DESIGN

SWING UPDATE

Jones & Bartlett Learning Introduction to Java and Software Design breaks the current paradigms for teaching Java and object-oriented programming in a first-year programming course. The Dale author team has developed a unique way of teaching object-oriented programming. They foster sound object-oriented design by teaching students how to brainstorm, use filtering scenarios, CRC cards, and responsiblity algorithms. The authors also present functional design as a way of writing algorithms for the class responsibilities that are assigned in the object-oriented design. Click here for downloadable student files This book has been developed from the ground up to be a Java text, rather than a Java translation of prior works. The text uses real Java I/O classes and treats event handling as a fundamental control structure that is introduced right from the beginning. The authors carefully guide the student through the process of declaring a reference variable, instantiating an object and assigning it to the variable. Students will gradually develop a complete and comprehensive understanding of what an object is, how it works, and what constitutes a well-designed class interface.

COPYRIGHT QUESTIONS AND ANSWERS FOR INFORMATION PROFESSIONALS

FROM THE COLUMNS OF AGAINST THE GRAIN

Purdue University Press Copyright law is a critical issue for authors, librarians, publishers, and information vendors. It is also a complex area, with many shades of gray. Librarians continually need to seek answers to questions ranging from the reproduction of copyrighted works for library users, through the performance of audiovisual works, to the digitization and display of protected works on library websites. This book presents updated versions of the author's copyright columns published in Against the Grain, the leading journal in acquisitions librarianship since the late 1990s. It is the first volume in the series Charleston Insights in Library, Archival, and Information Sciences. The aim of the Charleston Insights series is to focus on important topics in library and information science, presenting the issues in a relatively jargon-free way that is accessible to all types of information professionals, including librarians, publishers, and vendors, and this goal shapes the pragmatic and accessible tone of the book. The volume is presented in question-and-answer format. The questions are real, submitted by librarians, educators, and other information professionals who have attended the author's copyright law workshops and presentations or submitted them to her by e-mail or telephone. The author has selected the questions and answers that have general applicability. She has then arranged them into logical chapters, each prefaced by a short introduction to the topic. Because it is written in an accessible and clear style, readers may want to review the entire work or they can just access particular chapters or even specific questions as they need them. The volume includes an index to facilitate reference use.

PRODUCING OPEN SOURCE SOFTWARE

HOW TO RUN A SUCCESSFUL FREE SOFTWARE PROJECT

"O'Reilly Media, Inc." The corporate market is now embracing free, "open source" software like never before, as evidenced by the recent success of the technologies underlying LAMP (Linux, Apache, MySQL, and PHP). Each is the result of a publicly collaborative process among numerous developers who volunteer their time and energy to create better software. The truth is, however, that the overwhelming majority of free software projects fail. To help you beat the odds, O'Reilly has put together Producing Open Source Software, a guide that recommends tried and true steps to help free software developers work together toward a common goal. Not just for developers who are considering starting their own free software project, this book will also help those who want to participate in the process at any level. The book tackles this very complex topic by distilling it down into easily understandable parts. Starting with the basics of project management, it details specific tools used in free software projects, including version control, IRC, bug tracking, and Wikis. Author Karl Fogel, known for his work on CVS and Subversion, offers practical advice on how to set up and use a range of tools in combination with open mailing lists and archives. He also provides several chapters on the essentials of recruiting and motivating developers, as well as how to gain much-needed publicity for your project. While managing a team of enthusiastic developers -- most of whom you've never even met -- can be challenging, it can also be fun. Producing Open Source Software takes this into account, too, as it speaks of the sheer pleasure to be had from working with a motivated team of free software developers.
