The Future of the Public's Health in the 21st Century

[National Academies Press](#) The anthrax incidents following the 9/11 terrorist attacks put the spotlight on the nation's public health agencies, placing it under an unprecedented scrutiny that added new dimensions to the complex issues considered in this report. All students must review for this board exam. There are several different study techniques that can be employed, including flash cards, practice tests, and games, such as crossword puzzles. It is important to select the right method to study for the board exam. Whichever methods students select have an impact on the outcome of the exam. These crosswords puzzles can help students to memorize and/or recognize the answer since the board exam is mainly multiple choices. This crossword puzzle book contain more than 100 pages. The National Board Exam consists of many different types of exams. It can be one of the following: 1) 80% math and 20% drugs; 2) 80% retail and 20% hospital; 3) 70% hospital and 30% math; 4) 75% retail and 25% math; and 5) 90% top commonly used drugs and 10% math. This National Board Exam is not easy to pass unless students have mastered their drug knowledge as well as other subjects. In order to pass the Board Exam on the first try, one would benefit from using crosswords or word search methodology to study and attend the preparation classes. This book consists mainly of brand and generic names of the top 300 drugs with their drug classification. Students who use crosswords puzzles retain their memorization much better of the drug names and will have a higher chance of passing the exam. It is not easy to shuffle these 300 drugs, brand name and generic name, to a person's brain. Studies have shown that our brain can only absorb less than forty percent each day. Studying is a very time consuming process. It takes time for the brain to digest and store and convert into long term memory. Crossword puzzles and word search is by far the most effective style of learning for most students. It can help students build confidence when time to take the exam. The National Certified Board of Pharmacy exam contains mainly multiple-choice questions. There are a few questions on the exam that are for pre-trial purposes and will not scored. Each question provides four choices with only one correct or best answer. Students will not know which questions are scored and which are not. It is best to attempt to answer every single questions. Selecting the best answer reflects the outcome of students' memorization or recognize the right answer. Students who use this textbook and attend the preparation classes will have a greater chance of passing the Board Exam. Passing the exam depends on the students' time spent in studying and memorize all these top 300 drugs.

Ethical and Legal Considerations in Mitigating Pandemic Disease

Workshop Summary

[National Academies Press](#) In recent public workshops and working group meetings, the Forum on Microbial Threats of the Institute of Medicine (IOM) has examined a variety of infectious disease outbreaks with pandemic potential, including those caused by influenza (IOM, 2005) and severe acute respiratory syndrome (SARS) (IOM, 2004). Particular attention has been paid to the potential pandemic threat posed by the H5N1 strain of avian influenza, which is now endemic in many Southeast Asian bird populations. Since 2003, the H5N1 subtype of avian influenza has caused 185 confirmed human deaths in 11 countries, including some cases of viral transmission from human to human (WHO, 2007). But as worrisome as these developments are, at least they are caused by known pathogens. The next pandemic could well be caused by the emergence of a microbe that is still unknown, much as happened in the 1980s with the emergence of the human immunodeficiency virus (HIV) and in 2003 with the appearance of the SARS coronavirus. Previous Forum meetings on pandemic disease have discussed the scientific and logistical challenges associated with pandemic disease recognition, identification, and response. Participants in these earlier meetings also recognized the difficulty of implementing disease control strategies effectively. Ethical and Legal Considerations in Mitigating Pandemic Disease: Workshop Summary as a factual summary of what occurred at the workshop.

HIV Screening and Access to Care

Health Care System Capacity for Increased HIV Testing and Provision of Care

[National Academies Press](#) Increased HIV screening may help identify more people with the disease, but there may not be enough resources to provide them with the care they need. The Institute of Medicine's Committee on HIV Screening and Access to Care concludes that more practitioners must be trained in HIV/AIDS care and treatment and their hospitals, clinics, and health departments must receive sufficient funding to meet a growing demand for care.

Investing in the Health and Well-Being of Young Adults

[National Academies Press](#) Young adulthood - ages approximately 18 to 26 - is a critical period of development with long-lasting implications for a person's economic security, health and well-being. Young adults are key contributors to the nation's workforce and military services and, since many are parents, to the healthy development of the next generation. Although 'millennials' have received attention in the popular media in recent years, young adults are too rarely treated as a distinct population in policy, programs, and research. Instead, they are often grouped with adolescents or, more often, with all adults. Currently, the nation is experiencing economic restructuring, widening inequality, a rapidly rising ratio of older adults, and an increasingly diverse population. The possible transformative effects of these features make focus on young adults especially important. A systematic approach to understanding and responding to the unique circumstances and needs of today's young adults can help to pave the way to a more productive and equitable tomorrow for young adults in particular and our society at large. Investing in The Health and Well-Being of Young Adults describes what is meant by the term young adulthood, who young adults are, what they are doing, and what they need. This study recommends actions that nonprofit programs and federal, state, and local agencies can take to help young adults make a successful transition from adolescence to adulthood. According to this report, young adults should be considered as a separate group from adolescents and older adults. Investing in The Health and Well-Being of Young Adults makes the case that increased efforts to improve high school and college graduate rates and education and workforce development systems that are more closely tied to high-demand economic sectors will help this age group achieve greater opportunity and success. The report also discusses the health status of young adults and makes recommendations to develop evidence-based practices for young adults for medical and behavioral health, including preventions. What happens during the young adult years has profound implications for the rest of the life course, and the stability and progress of society at large depends on how any cohort of young adults fares as a whole. Investing in The Health and Well-Being of Young Adults will provide a roadmap to improving outcomes for this age group as they transition from adolescence to adulthood.

It explains public health approaches to developing effective health services and preventive programmes. This Second Edition contains real examples, illustrations and case histories to bring an important subject to life for the reader. The book covers the essential clinical services and preventive programmes including those for TB, HIV/AIDS, malaria, diarrhoeal diseases and the integrated management of childhood and adult illnesses. Practical methods are given for assessing health needs and working with communities to develop health services, and the development of hospital, health centre, and community health services, particularly mother, neonatal and child health services are explained. Additionally gender, social and economic influences on communities' health are explored. The clear language that is used throughout the book to describe the key public health skills (such as epidemiology, managing medicines, communicable and non communicable disease control, health financing, and implementing health services and programmes), will be accessible and highly valuable to doctors, community nurses, and other health professionals, whether in training or in practice as health officers and managers of health services and programmes.

Guidelines on Hepatitis B and C Testing

Testing and diagnosis of hepatitis B (HBV) and C (HCV) infection is the gateway for access to both prevention and treatment services, and is a crucial component of an effective response to the hepatitis epidemic. Early identification of persons with chronic HBV or HCV infection enables them to receive the necessary care and treatment to prevent or delay progression of liver disease. Testing also provides an opportunity to link people to interventions to reduce transmission, through counselling on risk behaviors and provision of prevention commodities (such as sterile needles and syringes) and hepatitis B vaccination. These are the first WHO guidelines on testing for chronic HBV and HCV infection and complement published guidance by WHO on the prevention, care and treatment of chronic hepatitis C and hepatitis B infection. These guidelines outline the public health approach to strengthening and expanding current testing practices for HBV and HCV, and are intended for use across age groups and populations.

The Future of Nursing 2020-2030

Charting a Path to Achieve Health Equity

The decade ahead will test the nation's nearly 4 million nurses in new and complex ways. Nurses live and work at the intersection of health, education, and communities. Nurses work in a wide array of settings and practice at a range of professional levels. They are often the first and most frequent line of contact with people of all backgrounds and experiences seeking care and they represent the largest of the health care professions. A nation cannot fully thrive until everyone - no matter who they are, where they live, or how much money they make - can live their healthiest possible life, and helping people live their healthiest life is and has always been the essential role of nurses. Nurses have a critical role to play in achieving the goal of health equity, but they need robust education, supportive work environments, and autonomy. Accordingly, at the request of the Robert Wood Johnson Foundation, on behalf of the National Academy of Medicine, an ad hoc committee under the auspices of the National Academies of Sciences, Engineering, and Medicine conducted a study aimed at envisioning and charting a path forward for the nursing profession to help reduce inequities in people's ability to achieve their full health potential. The ultimate goal is the achievement of health equity in the United States built on strengthened nursing capacity and expertise. By leveraging these attributes, nursing will help to create and contribute comprehensively to equitable public health and health care systems that are designed to work for everyone. The Future of Nursing 2020-2030: Charting a Path to Achieve Health Equity explores how nurses can work to reduce health disparities and promote equity, while keeping costs at bay, utilizing technology, and maintaining patient and family-focused care into 2030. This work builds on the foundation set out by The Future of Nursing: Leading Change, Advancing Health (2011) report.

Heterotrophic Plate Counts and Drinking-water Safety

The Significance of HPCs for Water Quality and Human Health

[World Health Organization](#) Heterotrophic Plate Counts and Drinking-water Safety provides a critical assessment of the role of the Heterotrophic Plate Count (HPC) measurement in drinking water quality management. It was developed from an Expert workshop of 32 scientists convened by the World Health Organization and the WHO/NSF International Collaborating Centre for Drinking Water Safety and Treatment in Geneva, Switzerland. The workshop sponsors were the U.S. Environmental Protection Agency, Health Canada, U.S. Centers for Disease Control and Prevention, and the American Waterworks Association Research Foundation. Heterotrophs are organisms, including bacteria, yeasts and moulds, that require an external source of organic carbon for growth. The HPC test (or Standard Plate Count), applied in many variants, is the internationally accepted test for measuring the heterotrophic microorganism population in drinking water, and also other media. It measures only a fraction of the microorganisms actually present and does not distinguish between pathogens and non-pathogens. Although most, if not all, bacterial pathogens are heterotrophs, most of the microorganisms detected by the HPC test conditions are not human pathogens, thus the colony counts obtained do not alone normally correlate with the presence of pathogens, in the absence of other indicators of faecal contamination. High levels of microbial growth can affect the taste and odor of drinking water and may indicate the presence of nutrients and biofilms which could harbor pathogens, as well as the possibility that some event has interfered with the normal production of the drinking water. HPC counts also routinely increase in water that has been treated by an in-line device such as a carbon filter or softener, in water-dispensing devices and in bottled waters and indeed in all water that has suitable nutrients, does not have a residual disinfectant, and is kept under sufficient conditions. However, there is no firm evidence that non-pathogenic bacterial growth as measured by HPC is accompanied by increased risk of illness among consumers. On the other hand there is some evidence that the presence of the indigenous non-harmful bacteria may challenge the survival of pathogens that may be present in biofilms and on surfaces. There is concern that some immuno-compromised persons may be at risk from exposure to otherwise harmless bacteria if exposure is excessive. There is debate among health professionals as to the need, utility or quantitative basis for health-based standards or guidelines relating to HPC-measured regrowth in drinking water. The issues that were addressed in this work include: the relationship between HPC in drinking water (including that derived from in-line treatment systems, dispensers and bottled water) and health risks for the general public; the role of HPC as an indirect indicator or index for pathogens of concern in drinking water; the role of HPC in assessing the efficacy and proper functioning of water treatment and supply processes; the relationship between HPC and the aesthetic acceptability of drinking water. Heterotrophic Plate Counts and Drinking-water Safety provides valuable information on the utility and the limitations of HPC data in the management and operation of piped water systems as well as other means of providing drinking water to the public. It is of particular value to piped public water suppliers and bottled water suppliers, manufacturers and users of water treatment and transmission equipment and inline treatment devices, water engineers, sanitary and clinical microbiologists, and national and local public health officials and regulators of drinking water quality.

WHO Expert Consultation on Rabies

Third Report

[World Health Organization](#) Since the 2015 launch of the Global framework to eliminate human rabies transmitted by dogs by 2030, WHO has worked with the Food and Agriculture Organization of the United Nations, the World Organization for Animal Health, the Global Alliance for Rabies Control and other stakeholders and partners to prepare a global strategic plan. This includes a country-centric approach to support, empower and catalyze national entities to control and eliminate rabies. In this context, WHO convened its network of collaborating centers on rabies, specialized institutions, members of the WHO Expert Advisory Panel on Rabies, rabies experts and partners to review strategic and technical guidance on rabies to support implementation of country and regional programs. This report provides updated guidance based on evidence and programmatic experience on the multiple facets of rabies prevention, control and elimination. Key updates include: (i) surveillance strategies, including cross-sectoral linking of systems and suitable diagnostics; (ii) the latest recommendations on human and animal immunization; (iii) palliative care in low resource settings; (iv) risk assessment to guide management of bite victims; and (v) a proposed process for validation and verification of countries reaching zero human deaths from rabies. The meeting supported the recommendations endorsed by the WHO Strategic Advisory Group of Experts on Immunization in October 2017 to improve access to affordable rabies biologicals, especially for underserved populations, and increase programmatic feasibility in line with the objectives of universal health coverage. The collaborative mechanisms required to prevent rabies are a model for collaboration on One Health at every level and among multiple stakeholders and are a recipe for success.

Communities in Action

Pathways to Health Equity

[National Academies Press](#) In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

[National Academies Press](#) The ability to see deeply affects how human beings perceive and interpret the world around them. For most people, eyesight is part of everyday communication, social activities, educational and professional pursuits, the care of others, and the maintenance of personal health, independence, and mobility. Functioning eyes and vision system can reduce an adult's risk of chronic health conditions, death, falls and injuries, social isolation, depression, and other psychological problems. In children, properly maintained eye and vision health contributes to a child's social development, academic achievement, and better health across the lifespan. The public generally recognizes its reliance on sight and fears its loss, but emphasis on eye and vision health, in general, has not been integrated into daily life to the same extent as other health promotion activities, such as teeth brushing; hand washing; physical and mental exercise; and various injury prevention behaviors. A larger population health approach is needed to engage a wide range of stakeholders in coordinated efforts that can sustain the scope of behavior change. The shaping of socioeconomic environments can eventually lead to new social norms that promote eye and vision health. *Making Eye Health a Population Health Imperative: Vision for Tomorrow* proposes a new population-centered framework to guide action and coordination among various, and sometimes competing, stakeholders in pursuit of improved eye and vision health and health equity in the United States. Building on the momentum of previous public health efforts, this report also introduces a model for action that highlights different levels of prevention activities across a range of stakeholders and provides specific examples of how population health strategies can be translated into cohesive areas for action at federal, state, and local levels.

A History of Public Health

[JHU Press](#) Since publication in 1958, George Rosen's classic book has been regarded as the essential international history of public health. Describing the development of public health in classical Greece, imperial Rome, England, Europe, the United States, and elsewhere, Rosen illuminates the lives and contributions of the field's great figures. He considers such community health problems as infectious disease, water supply and sewage disposal, maternal and child health, nutrition, and occupational disease and injury. And he assesses the public health landscape of health education, public health administration, epidemiological theory, communicable disease control, medical care, statistics, public policy, and medical geography. Rosen, writing in the 1950s, may have had good reason to believe that infectious diseases would soon be conquered. But as Dr. Pascal James Imperato writes in the new foreword to this edition, infectious disease remains a grave threat. Globalization, antibiotic resistance, and the emergence of new pathogens and the reemergence of old ones, have returned public health efforts to the basics: preventing and controlling chronic and communicable diseases and shoring up public health infrastructures that provide potable water, sewage disposal, sanitary environments, and safe food and drug supplies to populations around the globe. A revised introduction by Elizabeth Fee frames the book within the context of the historiography of public health past, present, and future, and an updated bibliography by Edward T. Morman includes significant books on public health history published between 1958 and 2014. For seasoned professionals as well as students, *A History of Public Health* is visionary and essential reading.
