## ATOMICS IN THE CLASSROOM

---

---

### TEACHING THE BOMB IN THE EARLY POSTWAR ERA

---

McFarland After the August 1945 atomic bombings of Hiroshima and Nagasaki and Japan's unconditional surrender, America's educational community quickly focused on preparing the younger generation for the atomic age. With the support of the federal government, elementary and secondary schools developed a curriculum known as "atomics," emphasizing the bomb's destructive power, peaceful applications of the atom and, most important, the need to control nuclear research. By the 1950s, with the Soviet Union's acquiring of the bomb, "atomics" expanded to include civil defense topics and activities, such as "duck and cover" drills. This book examines the broad curriculum—in social studies, science, mathematics, English, home economics and art—that emphasized atomics in American classrooms of the early postwar era. Lesson plans, class projects and activities, resource materials and extracurricular experiences are included.

## LIGHT IS A MESSENGER

### THE LIFE AND SCIENCE OF WILLIAM LAWRENCE BRAGG

---

OUP Oxford "[Light is a Messenger](#)" is the first biography of William Lawrence Bragg, who was only 25 when he won the 1915 Nobel Prize in Physics - the youngest person ever to win a Nobel Prize. It describes how Bragg discovered the use of X-rays to determine the arrangement of atoms in crystals and his pivotal role in developing this technique to the point that structures of the most complex molecules known to Man - the proteins and nucleic acids - could be solved. Although Bragg's Nobel Prize was for physics, his research profoundly affected chemistry and the new field of molecular biology, of which he became a founding figure. This book explains how these revolutionary scientific events occurred while Bragg struggled to emerge from the shadow of his father, Sir William Bragg, and amidst a career-long rivalry with the brilliant American chemist, Linus Pauling.
