## Concepts of Biology

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

## Molecular Biology of the Cell

## Strengthening Forensic Science in the United States

## A Path Forward

National Academies Press Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

## Anonymous Vs. Identifiable E-Peer Review in Writing Instruction

Trafford Publishing This study compared the effects of anonymous e-peer review with identifiable e-peer review on student writing performance and perceived learning satisfaction. It also investigated whether anonymous e-peer review facilitated a greater amount of critical peer feedback. Quasiexperimental design was used to test group differences on the dependent variables. Participants were forty-eight freshmen enrolled in two English composition classes at an American urban university. The two intact classes taught by the same instructor were randomly assigned to the anonymous e-peer review group and the identifiable e-peer review group. The results of the experiment showed that students in the anonymous e-peer review group outperformed their counterparts in the identifiable e-peer review group on writing performance; students in the anonymous e-peer review group provided a greater amount of critical feedback and lower ratings on their peers writing. No significant differences between the anonymous e-peer review group and the identifiable e-peer review group were found on student learning satisfaction.
