Hedge Funds

Structure, Strategies, and Performance

Oxford University Press **Hedge Funds: Structure, Strategies, and Performance** provides a synthesis of the theoretical and empirical literature on this intriguing, complex, and frequently misunderstood topic. The book dispels some common misconceptions of hedge funds, showing that they are not a monolithic asset class but pursue highly diverse strategies. Furthermore, not all hedge funds are unusually risky, excessively leveraged, invest only in illiquid asses, attempt to profit from short-term market movements, or only benefit hedge fund managers due to their high fees. Among the core issues addressed are how hedge funds are structured and how they work, hedge fund strategies, leading issues in this investment, and the latest trends and developments. The authors examine hedge funds from a range of perspectives, and from the theoretical to the practical. The book explores the background, organization, and economics of hedge funds, as well as their structure. A key part is the diverse investment strategies hedge funds follow, for example some are activists, others focusing on relative value, and all have views on managing risk. The book examines various ways to evaluate hedge fund performance, and enhances understanding of their regulatory environment. The extensive and engaging examination of these issues help the reader understands the important issues and trends facing hedge funds, as well as their future prospects.

Structured Finance and Insurance

The ART of Managing Capital and Risk

John Wiley & Sons **Praise for Structured Finance & Insurance** "More and more each year, the modern corporation must decide what risks to keep and what risks to shed to remain competitive and to maximize its value for the capital employed. Culp explains the theory and practice of risk transfer through either balance sheet mechanism such as structured finance, derivative transactions, or insurance. Equity is expensive and risk transfer is expensive. As understanding grows, and, as a result, costs continue to fall, ART will continue to replace equity as the means to cushion knowable risks. This book enhances our understanding of ART." --Myron S. Scholes, Frank E. Buck Professor of Finance, Emeritus, Graduate School of Business, Stanford University "A must-read for everyone offering structured

finance as a business, and arguably even more valuable to any one expected to pay for such service." --Norbert Johanning, Managing Director, DaimlerChrysler Financial Services "Culp's latest book provides a comprehensive account of the most important financing and risk management innovations in both insurance and capital markets. And it does so by fitting these innovative solutions and products into a single, unified theory of financial markets that integrates the once largely separated disciplines of insurance and risk management with the current theory and practice of corporate finance." --Don Chew, Editor, *Journal of Applied Corporate Finance* (a Morgan Stanley publication) "This exciting book is a comprehensive read on alternative insurance solutions available to corporations. It focuses on the real benefits, economical and practical, of alternatives such as captives, rent-a-captive, and mutuals. An excellent introduction to the very complex field of alternative risk transfer (ART)." --Paul Wohrmann, PhD, Head of the Center of Excellence ART and member of the Executive Management of Global Corporate in Europe, Zurich Financial Services "Structured Finance and Insurance transcends silos to reach the Enterprise Mountain top. Culp superbly details integrated, captive, multiple triggers and capital market products, and provides the architectural blueprints for enterprise risk innovation." --Paul Wagner, Director, Risk Management, AGL Resources Inc.

Between Fault Lines and Front Lines

Shifting Power in an Unequal World

Bloomsbury Publishing Inequality is one of today's greatest challenges, obstructing poverty reduction and sustainable development. As the power of elites grows and societal gaps widen, institutions representing the public good and universal values are increasingly disempowered or co-opted, and visions of social justice and equity side-lined. This book explores the roles of elites and institutions of power in the deepening of social and economic cleavages across

the globe, by asking how inequalities have reshaped structures from the local to the transnational level, and what consequences they have wrought. In addition, the contributors present examples of peaceful processes of policy change that have made societies greener and more socially just, levelled out social stratification, and devolved power and resources from elites to non-elites, or towards marginalized or discriminated groups. Based on cutting-edge empirical research, the chapters in this volume bring together conceptual thinking and a number of case studies from the Global North and South, combining different levels of analysis and a range of qualitative research methods to present solutions for closing the inequality gap.

Performance, Managerial Skill, and Factor Exposures in Commodity Trading Advisors and Managed Futures Funds

Dissertation.com Understanding risk is important. Prior to 2008, as the yields on safe assets hit rock bottom, investors began to focus on an alphabet soup of more complex instruments. These complex securities were rated AAA and appeared as safe as U.S. Treasuries, but with much higher yields. The 2008 financial crisis revealed, however, that higher yields on these instruments came with higher risk, albeit too late for these investors. This study seeks to understand the risk-return tradeoff, managerial skill, and factor exposures on the risk-return tradeoff in two financial instruments that have been limitedly investigated: commodity trading advisors (CTAs) and managed futures funds (MFFs). This study begins by documenting the differences between CTAs/MFFs and hedge funds and mutual funds, starting with the legal and operational differences. Next, it conducts a performance analysis, which indicates that CTAs and MFFs, as standalone investment vehicles, provide returns that are higher than the average market returns in bear markets, while carrying lower risk. The strong standing of CTAs and MFFs in bear markets earn them their reputation as “downside risk protectors.” CTAs and MFFs are profitable individual assets but adding these funds to classical asset portfolios enhances portfolio performance significantly. This feature makes them strong hedging assets. As expected, their performance is below that of standard assets in up markets. Chapter 4 finds that the superior performance of CTAs and MFFs can be explained by managerial skill. Positive and significant Jensen alphas are evidence of good performance; moreover, the persistence of the Jensen alphas is supported by both parametric and non-parametric tests. Incentive fees and fund age are found to be positively related to managerial skill, while (somewhat surprisingly) management fees are found to be negatively related to it. Chapter 5 finds that many financial and macroeconomic factors are statistically unrelated to CTA and MFF performance. However, the value premium (HML) factor and industrial production growth (IPG) are correlated with their performance. HML has a relation effect on one-month-ahead fund returns, whereas IPG has a negative association with them. Nonparametric tests support these results marginally. Overall, these findings suggest that both CTAs and MFFs use well-known and well-established predictors of expected returns to generate their alphas.

Hedged Out

Inequality and Insecurity on Wall Street

Univ of California Press A former hedge fund worker takes an ethnographic approach to Wall Street to expose who wins, who loses, and why inequality endures. Who do you think of when you imagine a hedge fund manager? A greedy fraudster, a visionary entrepreneur, a wolf of Wall Street? These tropes capture the public imagination of a successful hedge fund manager. But behind the designer suits, helicopter commutes, and illicit pursuits are the everyday stories of people who work in the hedge fund industry—many of whom don’t realize they fall within the 1 percent that drives the divide between the richest and the rest. With *Hedged Out*, sociologist and former hedge fund analyst Megan Tobias Neely gives readers an outsider’s insider perspective on Wall Street and its enduring culture of inequality. *Hedged Out* dives into the upper echelons of Wall Street, where elite white masculinity is the standard measure for the capacity to manage risk and insecurity. Facing an unpredictable and risky stock market, hedge fund workers protect their interests by working long hours and building tight-knit networks with people who look and behave like them. Using ethnographic vignettes and her own industry experience, Neely showcases the voices of managers and other workers to illustrate how this industry of politically mobilized elites excludes people on the basis of race, class, and gender. Neely shows how this system of elite power and privilege not only sustains itself but builds over time as the beneficiaries concentrate their resources. *Hedged Out* explains why the hedge fund industry generates extreme wealth, why mostly white men benefit, and why reforming Wall Street will create a more equal society.

Drawdown

The Most Comprehensive Plan Ever Proposed to Reverse Global Warming

Penguin • New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world “At this point in time, the *Drawdown* book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope.” —Per Espen Stoknes, Author, *What We Think About When We Try Not To Think About Global Warming* “There’s been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom.” —David Roberts, *Vox* “This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook.” —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth’s warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.

Making Sense of Intellectual Capital

Routledge Peter Drucker has introduced us all to the knowledge era, where knowledge is the primary resource and intangibles (intellectual capital resources and assets) are now largely recognized as the most important sources of organizations' competitive advantage. With the recognition of the importance of Intangibles comes the problem of how to properly identify them and assign them a value within the corporation. This is an area of concern in 5 fields: 1) accounting and financial reporting, 2) performance measurement and management, 3) valuation in the finance field, 4) the Human Resources field in terms of management, strategy, and planning, and 5) Intellectual Capital. Over the past eight years, over 25 methods have been proposed for the valuation of intangibles coming out of these 5 fields. In this book, Andriessen evaluates 25 existing methods of intangible valuation according to highly developed criteria. In performing his evaluations, Andriessen synthesizes the state of the art research from these fields based on extensive research. He then presents his own method for valuing intangibles, which he began developing and testing as a Senior Manager at KPMG Knowledge Advisory Services in The Netherlands. He relates six case studies in which this method was tested in actual companies, carefully reviews the results of his tests, and then concludes by offering a new and improved method for valuing intangibles in his Weightless Wealth Toolkit, a complete step-by-step process for identifying, valuing, and managing Intangibles to help managers operate successfully in the Intangible Economy.

John Quot;RoosterQuot; Clagett

Visual Training Solutions Group, Inc. (B).

What makes an industry attractive? What role do innovation and entrepreneurial initiative play in building and sustaining a new business in a competitive industry? The A case (UVA-ENT-0059) presents a 14-year veteran of the U.S. Navy, John amp;quot;Roosteramp;quot; Clagett, who left his career as a fighter pilot to pursue a business career--a step that has landed him where he is at the moment--as founder and president of Visual Training Solutions Group (VTSG). Clagett's current product offering is a virtual-reality training system designed for fighter pilots. While VTSG has several current government contracts, all of them are due to deliver in the next few months, leaving the pipeline dry in the near future. Rooster is concerned that he may not have the funding to meet his working-capital needs through the end of the year. In addition to the tactical issue of working capital, Rooster is faced with a decision about the future direction of the company. His product has started to gain traction, and large competitors are starting to take notice. Rooster sees several options: forging ahead and taking the large players head on, creating a plan to try to partner with them, or taking his innovative product in a different direction and industry. He is unsure of the competitive environment in the e-learning industry. Is that industry an attractive place for him to compete? He had gained a foothold in the Department of Defense because of his unique knowledge, but would he be as successful outside his comfort zone? The B case offers a short epilogue revealing Rooster's success in meeting his funding needs, his decision to stay in the defense industry, and the birth of strategic alliances with several large defense contractors.
