Problems and Solutions

The Future of Home Health Care

Workshop Summary

National Academies Press **Individuals with disabilities, chronic conditions, and functional impairments need a range of services and supports to keep living independently. However, there often is not a strong link between medical care provided in the home and the necessary social services and supports for independent living. Home health agencies and others are rising to the challenges of meeting the needs and demands of these populations to stay at home by exploring alternative models of care and payment approaches, the best use of their workforces, and technologies that can enhance independent living. All of these challenges and opportunities lead to the consideration of how home health care fits into the future health care system overall. On September 30 and October 1, 2014, the Institute of Medicine and the National Research Council convened a public workshop on the future of home health care. The workshop brought together a spectrum of public and private stakeholders and thought leaders to improve understanding of the current role of Medicare home health care in supporting aging in place and in helping high-risk,**

chronically ill, and disabled Americans receive health care in their communities. Through presentations and discussion, participants explored the evolving role of Medicare home health care in caring for Americans in the future, including how to integrate Medicare home health care into new models for the delivery of care and the future health care marketplace. The workshop also considered the key policy reforms and investments in workforces, technologies, and research needed to leverage the value of home health care to support older Americans, and research priorities that can help clarify the value of home health care. This summary captures important points raised by the individual speakers and workshop participants.

Affordable Medicare for All

American Health Care Is the Problem and Medicare for All Americans Is the Solution

Archway Publishing **The absence of universal health insurance coverage in the United States of America has been debated for years without many solutions being proposed. Barry G. Hoerig, a registered nurse and certified case manager, explains how Medicare for all would solve our problems in this thought-provoking book. He also reveals how politicians continue to work against a solution that could transform our health care system. As you read, you'll get answers to questions such as: • How does the American health care system go against the tenets of capitalism? • How are people without insurance treated differently than those with insurance? • How can American health care offer consumers more choices? Paving the way for Medicare for all makes sense but it won't come at a cost: Yes, Americans will have to pay more taxes, but it will also result in a reciprocal reduction of taxes and health care premiums elsewhere. It's imperative, however, that Medicare for all be cost effective and fair. Moreover, it must temper the negative aspects of capitalism while avoiding the awful results of socialism. Get detailed insights on how to improve health care for everyone with the insights in Affordable Medicare for All.**

These simple yet critical building blocks- caring, respect, simplicity, flexibility, integrity, communication, and professional culture-allow nurses to create a positive work environment, and provide holistic care to patients. Special Features: Provides practical, cost-effective solutions to business and management problems, such as strategies for improved staffing and retention Includes guidance on leadership and mentoring, building high-performance teams, and accelerating professional development Presents strategies and recommendations for developing strong relationships with staff for increased communication and efficiency

The Role of Human Factors in Home Health Care

Workshop Summary

National Academies Press **The rapid growth of home health care has raised many unsolved issues and will have consequences that are far too broad for any one group to analyze in their entirety. Yet a major influence on the safety, quality, and effectiveness of home health care will be the set of issues encompassed by the field of human factors research--the discipline of applying what is known about human capabilities and limitations to the design of products, processes, systems, and work environments. To address these challenges, the National Research Council began a multidisciplinary study to examine a diverse range of behavioral and human factors issues resulting from the increasing migration of medical devices, technologies, and care practices into the home. Its goal is to lay the groundwork for a thorough integration of human factors research with the design and implementation of home health care devices, technologies, and practices. On October 1 and 2, 2009, a group of human factors and other experts met to consider a diverse range of behavioral and human factors issues associated with the increasing migration of medical devices, technologies, and care practices into the home. This book is a summary of that workshop, representing the culmination of the first phase of the study.**

Organizing For Resilience

Leading and Managing Risk in a Disruptive World

Routledge Organizing for Resilience provides a fresh and novel insight into research on how leaders can prepare their organizations to face up to shocks and disruptions in a turbulent and unpredictable world. It provides an analysis of the topic of organizational resilience in a comprehensive and integrative way, with fresh theoretical and research implications as well as important implications for leaders. The first book to synthesize themes from across a spectrum of resilience using the metaphor of a 'resilience landscape', chapters in Part I are devoted to five analytical levels: individual level resilience; small firms in which major disruption can threaten survival; large firms with disruptions in one part of the organization; large firms facing enterprise-wide disruption; and disruption to a complete community or economic ecosystem of individuals and organizations. Cases and practice insights are presented to bring the topics to life, allowing reflection and debate at each level. In Part II, the construct of the 'resilience landscape' is developed, along with a discussion on leadership for resilience by instilling a resilience mind-set and developing capabilities in relational resilience. The book is ideally suited to bachelor's and master's degree courses on strategy, organizational behaviour and leadership. PhD and DBA researchers in the field of resilience and strategy will also find the book useful, as will practising consultants and business leaders.

Drawdown

The Most Comprehensive Plan Ever Proposed to Reverse Global Warming

Penguin • **New York Times bestseller** • **The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world** “At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is

an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope.” —Per Espen Stoknes, Author, What We Think About When We Try Not To Think About Global Warming “There’s been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom.” —David Roberts, Vox “This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook.” —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth’s warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.
