Our CCHT Exam Practice Questions give you the opportunity to test your knowledge on a set of questions. You can know everything that is going to be covered on the test and it will not do you

HEMODIALYSIS TECHNOLOGY

Karger Medical and Scientific Publishers This publication is a collection of the papers presented at the 'First International Course on Hemodialysis Technology', Vicenza, June 2002: It covers a wide range of topics, including aspects of vascular access and new forms of monitoring access function. Moreover, anticoagulation strategies and antimicrobial treatment are debated, with special emphasis on temporary catheters and prosthetic devices. Membrane composition and structure, their methods of sterilization and performance are discussed by experts and manufacturers, bringing together in a unique way science, theory and manufacturing procedures. The same synthesis is achieved with respect to hemodialyzers, adsorbent devices, dialysis techniques and machines. A new issue is the possibility of computer-assisted data collection and management: This subject is discussed by experts in electronic data management, together with managers of large dialysis networks, concentrating on matters of quality assurance and continuous quality improvement programs. Special attention is given to dialysate and water purity since this is the starting point for newer dialytic techniques such as online hemodiafiltration. Moreover, the results obtained from the IDOPPS study are incorporated into the discussion of different practice patterns and anemia management. Finally, future trends are explored including automatic sensors and biofeedback monitors. Covering various aspects of hemodialysis technology,

this book will be a helpful tool for physicians and nurses, both for education and information.

AUTOMATED PERITONEAL DIALYSIS

Karger Medical and Scientific Publishers While continuous ambulatory peritoneal dialysis (CAPD) has been the standard peritoneal procedure since the seventies, different schedules of automated peritoneal dialysis (APD) have emerged during the eighties. Today, APD is considered a valuable tool in the management of ESRD patients, together with CAPD and hemodialysis. However, despite its frequent use, APD has not yet been well assessed, and most pathophysiological and clinical studies on PD refer to CAPD. In this book, major experts in the field therefore discuss and evaluate the insights gained on APD up to now, presenting a comprehensive review of all experimental, technical and clinical aspects related to the various treatments grouped under the definition of APD. The recent developments presented are divided into four sections: membrane permeability, transport mechanisms and kinetic modeling applied to APD; prescription and adequacy of different APD treatment schedules; dialysis machines and solutions for APD, and, lastly, different clinical aspects such as the possibility to maintain APD program and residual renal function. Physicians

involved in ESRD care, renal fellows and scientists both in the academic world and in the hospital setting will undoubtedly profit from this timely publication.

REVIEW OF HEMODIALYSIS FOR NURSES AND DIALYSIS PERSONNEL 9TH EDITION

CONTINUOUS AMBULATORY PERITONEAL DIALYSIS

Springer Science & Business Media For more than a generation haemodialysis has been the principal method of treating patients with both acute and chronic renal failure. Initially, developments and improvements in the system were highly technical and relevant to only a relatively small number of specialists in nephrology. More recently, as advances in therapy have demonstrated the value of haemofiltration in the intensive therapy unit and haemoperfusion for certain types of poisoning, the basic principles of haemodialysis have been perceived as important in many areas of clinical practice. In this volume, the potential advantages of bicarbonate haemodialysis are objectively assessed, the technical and clinical aspects of both haemofiltration and haemoperfusion discussed and the continuing problems associated with such extra corporeal circuits analysed. All the chapters have been written by recognized experts in their field. The increasing availability of highly technical facilities for appropriately selected patients should ensure that the information contained in the book is relevant not only to nephrologists but to all practising clinicians. ABOUT THE EDITOR Dr Graeme R. D. Catto is Professor in Medicine and Therapeutics at the University of Aberdeen and Honorary Consultant Physician/Nephrologist to the Grampian Health Board. His current interest in transplant immunology was stimulated as a Harkness Fellow at Harvard Medical School and the Peter Bent Brighton Hospital, Boston, USA. He is a member of many medical societies including the Association of Physicians of Great Britain and Ireland, the Renal Association and the Transplantation Society.

HEMODIALYSIS DOSE AND ADEQUACY

PREPARING FOR EMERGENCIES

A GUIDE FOR PEOPLE ON DIALYSIS

THERAPEUTIC PLASMA EXCHANGE

Springer Science & Business Media This volume contains papers and discussions of the VIth Dialyse-Arzte Workshop, which was held in Bernried at Lake Starnberg near Munich the 5th and 6th of March 1980. Generously sponsored by Travenol, Munich, the Dialyse-Arzte meetings now have a tradition spanning 16 years. According to the constitution of these meetings, the topics of earlier years had to cover dialysis and related fields. Thus the sponsor requested that this year also one lecture - incorporated here as part - should deal with the state of art of dialysis, thereby hopefully linking this Workshop to the previous meetings. Dialysis techniques of the 1960s, pioneered by many of attending speakers and panelists (see List of Contributors), have never come to a standstill. Indeed, vascular access and extra corporeal circulation have become routine for the nephrologist and have made possible the introduction of new approaches, such as hemofiltration and hemoperfusion. Also today new membrane technologies provide us with a potentially even more effective therapeutic tool, namely plasma separation.
