Coping Cat Workbook Workbook Pub Incorporated Presents 16 sessions and activities for children to practice recognizing feelings and physical reactions to anxiety in different situations. **Brief Coping Cat The 8 - Session Coping Cat Workbook** Cognitive-behavioral Therapy for Anxious Children Therapist Manual Workbook Pub Incorporated Treatment manual describing a 16-session program for the treatment of anxiety disorders, specifically generalized anxiety disorder, social phobia, and separation anxiety disorder, in children and young adolescents. Treatment's goal is to teach children to recognize signs of unwanted anxious arousal and to follow that recognition with the use of anxiety management strategies. Cognitive-behavioral Therapy for Impulsive Children Guilford Press Kendall and Braswell have designed and developed specific procedures that can improve children's self-control and reduce their impulsivity. In this second edition, the authors both expand and focus the application of their program, involving parents and teachers to a greater extent, making greater use of hands-on workbook materials, and adapting and implementing procedures for children with a wide range of behavior problems linked to impulsivity. The present edition also provides, in greater detail, descriptions of treatment strategies, in-session therapy materials, case examples, and illustrative transcripts. This book will be of great value to child and family psychologists, social workers, educators, and psychiatrists, as well as parents, pediatricians, classroom teachers, and others who frequently encounter impulsive children. This book also serves as an excellent ancillary text for courses in clinical child psychology, school psychology, educational interventions, applied developmental psychology, and other mental health related classes. **Coping Power Parent Group Workbook 8-Copy Set** Oxford University Press This program is an evidence based intervention for behavioral in pre-adolescent children (grades 5 and 6). Continuing the work of the Fast Track Program, currently under contract, this intervention targets children who are beginning to show signs of severe aggression and social dysfunction at school. Children who begin to exhibit aggression as pre-adolescents are much more likely to have histories of substance abuse, interpersonal violence, and criminal behavior in their adolescence. By targeting these children before their behavior has become extremely dangerous or unmanageable, this program has been proven to reduce the occurrence of these problems, and to improve functioning in school. Studies have shown that children who demonstrate aggressive behaviors have maladaptive coping skills and misperceptions of conflict or threat. This program teaches positive strategies for coping with perceived conflict or threat, as well as an understanding of the participant's feelings and motivations behind inappropriate behaviors. The Coping Power program involves an intervention with aggressive children and a simultaneous program for their parents, to increase positive motivations at home as well as at school. The facilitator's guides include step-by step instructions for accurately implementing this evidence-based program. This is the corresponding workbook for parents which includes worksheets and monitoring forms to track progress and reinforce the skills learned in the group sessions. **The C.A.T. Project Workbook For the Cognitive Behavioral Treatment of Anxious Adolescents** Workbook Pub Incorporated Presents sessions, lessons and take-home activities for teens with anxiety, in order to examine the emotions and physical feelings that occur in different situations. **Handbook of Evidence-Based Treatment Manuals for Children and Adolescents** Oxford University Press With the advance of evidence-based practice has come the publication of numerous dense volumes reviewing the theoretical and empirical components of child and adolescent treatment. The Werewolf's Guide to Life A Manual for the Newly Bitten Crown Have you been attacked by a wolf-like creature in the last 30 days? Was it after the sun had set and under a full moon? If you answered, "yes" to both these questions, there's a very good chance that you were bitten by a werewolf. You now have less than a month before the full moon returns and with it your first transformation into a savage, bloodthirsty beast. Survival is an option, but first, know this: * Werewolves are real. * The majority of lycanthropes who do not have access to this book die during or shortly after their first transformations, generally due to heart failure, gunshot wounds, exposure, drowning or suicide. * Hollywood horror movies are NOT to be used as guides to living as a werewolf.
