User's Guide to NOVAS Version F3.1

The Naval Observatory Vector Astrometry Software (NOVAS) is a source-code library for computing various commonly needed quantities in positional astronomy. The code exists in two languages, Fortran and C, plus Python wrappers are now available for the C. The Fortran version goes back to the late 1970s, but has been updated periodically to use new, more accurate models that represent the evolving standards of the international astronomical and geodetic communities. The C version was first introduced in 1996 and provides the same functionality and accuracy. In full-accuracy calculations using the same data sources, differences in the results from Fortran and C editions of NOVAS, for the same calculation, should not exceed 6×10^{-8} arcseconds (3×10^{-13} radians) for solar system bodies and 7×10^{-10} arcseconds (3×10^{-15} radians) for stars.

Airport Passenger Terminal Planning and Design: Spreadsheet models and user's guide

Transportation Research Board TRB's Airport Cooperative Research Program (ACRP) Report 25, Airport Passenger Terminal Planning and Design comprises a guidebook, spreadsheet models, and a user's guide in two volumes and a CD-ROM intended to provide guidance in planning and developing airport passenger terminals and to assist users in analyzing common issues related to airport terminal planning and design. Volume 1 of ACRP Report 25 explores the passenger terminal planning process and provides, in a single reference document, the important criteria and requirements needed to help address emerging trends and develop potential solutions for airport passenger terminals. Volume 1 addresses the airside, terminal building, and landside components of the terminal complex. Volume 2 of ACRP Report 25 consists of a CD-ROM containing 11 spreadsheet models, which include practical learning exercises and several airport-specific sample data sets to assist users in determining appropriate model inputs for their situations, and a user's guide to assist the user in the correct use of each model. The models on the CD-ROM include such aspects of terminal planning as design hour determination, gate demand, check-in and passenger and baggage screening, which require complex analyses to support planning decisions. The CD-ROM is also available for download from TRB's website as an ISO image.

The F3 Manual of Virtuous Leadership

We have no shortage of people who hold leadership positions in our world, but how many of those could we truly call "leaders", let alone virtuous leaders?The old adage of: "A Leader is followed when he/she is in the room. A Good Leader is followed when he/she is out of the room. A Great/Virtuous Leader is followed long after they are dead..." is true. In this book, David outlines the framework for becoming a virtuous leader, one that leaves a Legacy behind and truly makes an impact on the world.

Exploring Abstract Algebra With Mathematica®

Springer Science & Business Media This upper-division laboratory supplement for courses in abstract algebra consists of several Mathematica packages programmed as a foundation for group and ring theory. Additionally, the "user's guide" illustrates the functionality of the underlying code, while the lab portion of the book reflects the contents of the Mathematica-based electronic notebooks. Students interact with both the printed and electronic versions of the material in the laboratory, and can look up details and reference information in the user's guide. Exercises occur in the stream of the text of the lab, which provides a context within which to answer, and the questions are designed to be either written into the electronic notebook, or on paper. The notebooks are available in both 2.2 and 3.0 versions of Mathematica, and run across all platforms for which Mathematica exists. A very timely and unique addition to the undergraduate abstract algebra curriculum, filling a tremendous void in the literature.
