THE SOCIOLOGICALLY EXAMINED LIFE

PIECES OF THE CONVERSATION

Oxford University Press, USA While the usual introductory sociology text emphasizes defining key concepts in the field, the rigidity of this structure creates a need for a text that teaches real-world application of these concepts. The Sociologically Examined Life: Pieces of the Conversation prides itself on being an"anti-text," a tool that demonstrates how to recognize and utilize sociological thinking in the real world. The conversational writing encourages discussion - and debate - over ideas that are provocative and personal, and pushes students to think critically about what makes them feel the way theydo. The Sociologically Examined Life draws from examples that are culturally relevant to today's students, and encourages students to apply sociological thinking to their everyday lives and to reflect on their own roles as active players in the social world.

NEUROBIOLOGY OF INTERVAL TIMING

Springer The study of how the brain processes temporal information is becoming one of the most important topics in systems, cellular, computational, and cognitive neuroscience, as well as in the physiological bases of music and language. During the last and current decade, interval timing has been intensively studied in humans and animals using increasingly sophisticated methodological approaches. The present book will bring together the latest information gathered from this exciting area of research, putting special emphasis on the neural underpinnings of time processing in behaving human and non-human primates. Thus, Neurobiology of Interval Timing will integrate for the first time the current knowledge of both animal behavior and human cognition of the passage of time in different behavioral context, including the perception and production of time intervals, as well as rhythmic activities, using different experimental and theoretical frameworks. The book will the composed of chapters written by the leading experts in the fields of psychophysics, functional imaging, system neurophysiology, and musicology. This cutting-edge scientific work will integrate the current knowledge of the neurobiology of timing behavior putting in perspective the current hypothesis of how the brain quantifies the passage of time across a wide variety of critical behaviors.

EDUCATION CODE

THE HITCH HIKER'S GUIDE TO LCA

AN ORIENTATION IN LIFE CYCLE ASSESSMENT METHODOLOGY AND APPLICATION

Professional Pub Service The environmental life cycle of a product consists of all the stages from raw material extraction through production and use to waste management. Life cycle assessment (LCA), then, is the assessment of the environmental impact of a product throughout its life cycle. The holistic perspective that LCA provides on the environmental performance of products has made it a central concept for both environmental management in industry and environmental policy-making in public government. This is a textbook on LCA for those who want to learn the practice of LCA, e.g. environmental engineers, environmental managers and eco-designers. The title paraphrases Douglas Adams' famous story 'The Hitch Hiker's Guide to the Galaxy', in which the machine Deep Thought after seven and a half million years of computing come up with '42' as the answer to the 'great Question of Life, the Universe and Everything'. Expectations on LCA are often similar - simple answer to difficult environmental dilemmas, and the result often as incomprehensible as 42, unless one knows how to interpret LCA methodology and results. The book is organised in three parts covering LCA methodology, LCA applications and exercises on LCA. Two introductory chapters give a general overview of the LCA concept and its historical development. After that, LCA methodology is described in detail in six chapters. Different fields of LCA application are covered in five subsequent chapters. Since the aim of the book is to teach the execution of LCA, there are also a number of exercises. Smaller exercises train different aspects of LCA methodology and prepare for the larger ones, ten complete LCA exercise projects.

WINDOWS 11

THE GOOD, THE BAD & THE UGLY

A. B. Lawal In this book I give you my honest views on the good and dark sides of Windows 11. There are more features, issues, hacks and tricks hiding in Windows 11 than most people will ever know. I unveiled some of them in this book. I've been a Windows user for over 20 years, and after further exploring two early builds of Windows 11, at first I had to admit that it looks rather nice, and is better than Windows 10. But I soon discovered there's a lot more than meets the eye. So I strongly advise you read this book first to help you

decide if you should install or upgrade your OS to Windows 11. These are some of what you'll learn in this book: The new features and major changes since the Windows 11 insider preview was released. Why Microsoft's system health-check application, and the hardware constraints they plan to include in Windows 11 are shameful, and how they can affect your system and you. Why I suspect the rollout of Windows 11 will be relatively slow, and why it will take quite a long time before lots of people start using it. Apps experiencing troubles with Windows 11 and why Microsoft is unable to find a fix. 8 Windows 11 troubles Microsoft is currently investigating The Microsoft's policy and how it will affect Windows 11 users when Windows 10 support ends on October 14th, 2025. How to quickly and reliably check if your system can run Windows 11. Two methods to install Windows 11 step by step (for Windows and Linux-based systems with backup and restore options for programs and files). A work around to install Windows 11 on non-supported hardware. How to dual boot your PC with Windows 11 and 10 step by step. And so much more...

ADVANCED NETWORK TECHNOLOGY

This background paper analyzes technologies for tomorrow's information superhighways. Advanced networks will first be used to support scientists in their work, but will soon be deployed more widely in business, entertainment, health care, and education. Significant progress has been made toward the development of gigabit network technology since the basic characteristics of the design of broadband networks began to emerge in the mid-1980s. No insurmountable technological barriers to the gigabit National Research and Education Network (NREN) appear to exist, as work in the testbeds (i.e., initial testing programs) is demonstrating. Testbed networks model the configuration in which the technology is expected to be deployed, in that test sites are separated by realistic distances and realistic technological applications will be used. Testbed applications research helps researchers understand how the NREN can be used to achieve science goals and as a testbed in itself, demonstrating technology that can be deployed more widely. The following topics are reviewed: (1) the Internet; (2) broadband network technology; (3) gigabit research; and (4) application of testbed research. One table and 17 figures illustrate the discussion. Highlighted points are summarized in 10 boxes. (SLD)

AN INTRODUCTION TO THE ARCHAEOLOGY OF CENTRAL CALIFORNIA

MEDICAL ANTHROPOLOGY

A BIOCULTURAL APPROACH

Oxford University Press, USA Intended as the primary text for introductory courses on medical anthropology, this book integrates human biological data relevant to health and disease with both evolutionary theory and the social environments that more often than not produce major challenges to health and survival. Becausestudents who take this fastest-growing anthropology course come from a variety of disciplines (anthropology, biology, especially pre-med students, and health sciences, especially), the text does not assume anything beyond a basic high-school level familiarity with human biology and anthropology. Theauthors first present basic biological information on a particular health condition and then expand their analysis to include evolutionary, historical, and cross-cultural perspectives. Among the topics covered are nutrition, infectious disease, stress, reproductive health, behavioral disease, aging,race/racism and health, mental health, and healers and healing.

GLOBAL TAX FAIRNESS

Oxford University Press This book addresses sixteen different reform proposals that are urgently needed to correct the fault lines in the international tax system as it exists today, and which deprive both developing and developed countries of critical tax resources. It offers clear and concrete ideas on how the reforms can be achieved and why they are important for a more just and equitable global system to prevail. The key to reducing the tax gap and consequent human rights deficit in poor countries is global financial transparency. Such transparency is essential to curbing illicit financial flows that drain less developed countries of capital and tax revenues, and are an impediment to sustainable development. A major break-through for financial transparency is now within reach. The policy reforms outlined in this book not only advance tax justice but also protect human rights by curtailing illegal activity and making available more resources for development. While the reforms are realistic they require both political and an informed and engaged civil society that can put pressure on governments and policy makers to act.

CMOS IMAGERS

FROM PHOTOTRANSDUCTION TO IMAGE PROCESSING

Springer Science & Business Media The idea of writing a book on CMOS imaging has been brewing for several years. It was placed on a fast track after we agreed to organize a tutorial on CMOS sensors for the 2004 IEEE International Symposium on Circuits and Systems (ISCAS 2004). This tutorial defined the structure of the book, but as first time authors/editors, we had a lot to learn about the logistics of putting together information from multiple sources. Needless to say, it was a long road between the tutorial and the book, and it took more than a few months to complete. We hope that you will find our journey worthwhile and the collated information useful. The laboratories of the authors are located at many universities distributed around the world. Their unifying theme, however, is the advancement of knowledge for the development of systems for CMOS imaging and image processing. We hope that this book will highlight the ideas that have been pioneered by the authors, while providing a roadmap for new practitioners in this field to exploit exciting opportunities to integrate imaging and "smartness" on a single VLSI chip. The potential of these smart imaging systems is still unfulfilled. Hence, there is still plenty of research and development to be done.

SLAVE STEALERS

TRUE ACCOUNTS OF SLAVE RESCUES: THEN AND NOW

Follow two abolitionists who fought one of the most shockingly persistent evils of the world: human trafficking and sexual exploitation of slaves. Told in alternating chapters from perspectives spanning more than a century apart, read the riveting 19th century first-hand account of Harriet Jacobs and the modern-day eyewitness account of Timothy Ballard. Harriet Jacobs was an African-American, born into slavery in North Carolina in 1813. She thwarted the sexual advances of her master for years until she escaped and hid in the attic crawl space of her grandmother's house for seven years before escaping north to freedom. She published an autobiography of her life, Incidents in the Life of a Slave Girl, which was one of the first open discussions about sexual abuse endured by slave women. She was an active abolitionist, associated with Frederick Douglass, and, during the Civil War, used her celebrity to raise money for black refugees. After the war, she worked to improve the conditions of newly-freed slaves. As a former Special Agent for the Department of Homeland Security who has seen the horrors and carnage of war, Timothy Ballard founded a modern-day "underground railroad" which has rescued hundreds of children from being fully enslaved, abused, or trafficked in third-world countries. His story includes the rescue and his eventual adoption of two young siblings--Mia and Marky, who were born in Haiti. Section 2 features the lives of five abolitionists, a mix of heroes from past to present, who call us to action and teach us life lessons based on their own experiences: Harriet Tubman--The "Conductor"; Abraham Lincoln--the "Great Emancipator"; Little Mia--the sister who saved her little brother; Guesno Mardy--the Haitian father who lost his son to slave traders; and Harriet Jacobs--a teacher for us all.
