It includes all the popular characteristics of Novare textbooks: smaller profile, vibrant, original, and relevant graphics, lucid conversational prose, and an approach that connects students with real-world science as stewards of God's creation. And of course, Novare's guiding principles of Mastery, Integration, and Kingdom perspective are woven throughout this text. Mastery learning is felt in the way key concepts, definitions, and skills are repeatedly brought up so that students rehearse and reencounter materials with a view toward more thorough retention of course content. We integrate relevant subjects such as mathematics, history, language skills, measurement, and more to both enhance the reading and demonstrate the connections that exist between all subjects. And Novare's Kingdom Perspective is evident in the attribution of the marvels of creation to God's creative power. Author Kevin Nelstead regularly draws the reader to appreciate the intricacy and excellence of God's works, tying in scripture where appropriate. Earth Science should be about much more than learning about rocks and mountains and the seasons. Think about how huge God's mandate to humans is that we are to steward and exhibit vice regency over creation! The best Christian curriculum will bring students into the wonder of God's astounding creation and foster the mind of a gracious and caring steward. Within the context of the fascinating study of landforms, minerals and planetary phenomena, many other timely and important topics are covered including conservation of natural resources, climate change, pollution, environmental justice, and the current scientific consensus concerning geologic history.
