The Car Hacker's Handbook

A Guide for the Penetration Tester

No Starch Press Modern cars are more computerized than ever. Infotainment and navigation systems, Wi-Fi, automatic software updates, and other innovations aim to make driving more convenient. But vehicle technologies haven't kept pace with today's more hostile security environment, leaving millions vulnerable to attack. The Car Hacker's Handbook will give you a deeper understanding of the computer systems and embedded software in modern vehicles. It begins by examining vulnerabilities and providing detailed explanations of communications over the CAN bus and between devices and systems. Then, once you have an understanding of a vehicle's communication network, you'll learn how to intercept data and perform specific hacks to track vehicles, unlock doors, glitch engines, flood communication, and more. With a focus on low-cost, open source hacking tools such as Metasploit, Wireshark, Kayak, can-utils, and ChipWhisperer, The Car Hacker's Handbook will show you how to:

- Build an accurate threat model for your vehicle
- Reverse engineer the CAN bus to fake engine signals
- Exploit vulnerabilities in diagnostic and data-logging systems
- Hack the ECU and other firmware and embedded systems
- Feed exploits through infotainment and vehicle-to-vehicle communication systems
- Override factory settings with performance-tuning techniques
- Build physical and virtual test benches to try out exploits safely

If you're curious about automotive security and have the urge to hack a two-ton computer, make The Car Hacker's Handbook your first stop.

US-Asia Economic Relations

A Political Economy of Crisis and the Rise of New Business Actors

Routledge In a world of continuing financial volatility, this book critically evaluates the oft-cited claim that US firms and the US government attempt to open emerging markets in economic distress and acquire valuable industrial and financial assets. Focusing particularly on Korea and Thailand, the author examines the degree of market opening, the roles US actors played in this process and the level of foreign firm activity in the years after the Asian crisis. Justin Robertson finds surprisingly little coherence between the strategies of US firms and US policy-makers. At the same time, the book downplays European investments, concluding instead that the decade since the Asian crisis has reaffirmed strengths of US capital, particularly in some of the most important sectors of the global economy. Investment banking, private equity and subcontracting are significant new features of US-Asia economic relations. Providing a sophisticated understanding of US interests in Asia, especially in terms of the politics of finance capital, and including a wealth of empirical data on the US and Asian political economies, this book will be invaluable for students and scholars of international political economy and Asian economics and politics.

Principles of Electric Machines and Power Electronics

Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles

National Academies Press The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

A History of the Mediterranean Air War, 1940-1945

Volume 5 - From the Fall of Rome to the End of the War 1944-1945

Grub Street Publishing During the final year of World War II, the defending Axis forces were steadily driven from southern skies by burgeoning Anglo-American power. This was despite the steady withdrawal of units to more demanding areas. In this fifth volume of the series the activities of the Allied tactical air forces in support of the armies on the ground as their opponents were steadily extracted from northern Italy and the Balkans for the final defense of the central European homeland - are described in detail. The book commences with coverage of the final fierce air-sea battles over the Aegean which preceded the advance northwards to Rome and the ill-conceived British attempt to secure the Dodecanese islands following the armistice with Italy. The authors also deal fully and comprehensively with the advance northwards following the occupation of Rome, and the departure of forces to support the invasion of France from the Riviera coast, coupled with the formation of a new Balkan Air Force in eastern Italy to pursue the German armies withdrawing from Yugoslavia and take possession of newly freed Greece. The effect of the creation within the same area of the US and RAF strategic forces to join the Allied Combined Bombing Offensive is discussed. The final volume in the series will be concerned most especially with this latter campaign.
