EXCELSIOR, YOU FATHEAD!

THE ART AND ENIGMA OF JEAN SHEPHERD

Rowman & Littlefield Jean Shepherd (1921-1999) master humorist is best known for his creation "A Christmas Story" the popular movie about the child who wants a BB gun for Christmas and nearly shoots his eye out. What else did Shepherd do? He is considered by many to be the Mark Twain and James Thurber of his day. For many thousands of fans for decades Shep talked on the radio late at night keeping them up way past their bedtimes. He entertained without a script improvising like a jazz musician on any and every subject you can imagine. He invented and remains the master of talk radio. Shepherd perpetrated one of the great literary hoaxes of all time promoting a nonexistent book and author and then brought the book into existence. He wrote 23 short stories for "Playboy" four times winning their humor of the year award and also interviewed The Beatles for the magazine. He authored several popular books of humor and satire created several television series and acted in several plays. He is the model for the character played by Jason Robards in the play and movie "A Thousand Clowns" as well as the inspiration for the Shel Silverstein song made famous by Johnny Cash A Boy Named Sue. Readers will learn the significance of innumerable Shepherd words and phrases such as Excelsior you fathead and observe his constant confrontations with the America he loved. They will get to know and understand this multitalented genius by peeking behind the wall he built for himself - a wall to hide a different and less agreeable persona. Through interviews with his friends co-workers and creative associates such as musician David Amram cartoonist and playwright Jules Feiffer publisher and broadcaster Paul Krassner and author Norman Mailer the book explains a complex and unique genius of our time. Shepherd pretty much invented talk radio ... What I got of him was a wonder at the world one man could create. I am as awed now by his achievement as I was then. - Richard Corliss "Time" magazine online

PROCEEDINGS OF THE 23RD INTERNATIONAL CONFERENCE ON INTERACTIVE COLLABORATIVE LEARNING (ICL2020), VOLUME 1

Springer Nature This book contains papers in the fields of collaborative learning, new learning models and applications, project-based learning, game-based education, educational virtual environments, computer-aided language learning (CALL) and teaching best practices. We are currently witnessing a significant transformation in the development of education and especially post-secondary education. To face these challenges, higher education has to find innovative ways to quickly respond to these new needs. There is also pressure by the new situation in regard to the Covid pandemic. These were the aims connected with the 23rd International Conference on Interactive Collaborative Learning (ICL2020), which was held online by University of Technology Tallinn, Estonia from 23 to 25 September 2020. Since its beginning in 1998, this conference is devoted to new approaches in learning with a focus on collaborative learning. Nowadays the ICL conferences are a forum of the exchange of relevant trends and research results as well as the presentation of practical experiences in Learning and Engineering Pedagogy. In this way, we try to bridge the gap between 'pure' scientific research and the everyday work of educators. Interested readership includes policymakers, academics, educators, researchers in pedagogy and learning theory, school teachers, learning industry, further and continuing education lecturers, etc.

PROBABILITY WITH APPLICATIONS IN ENGINEERING, SCIENCE, AND TECHNOLOGY

Springer This updated and revised first-course textbook in applied probability provides a contemporary and lively post-calculus introduction to the subject of probability. The exposition reflects a desirable balance between fundamental theory and many applications involving a broad range of real problem scenarios. It is intended to appeal to a wide audience, including mathematics and statistics majors, prospective engineers and scientists, and those business and social science majors interested in the quantitative aspects of their disciplines. The textbook contains enough material for a year-long course, though many instructors will use it for a single term (one semester or one quarter). As such, three course syllabi with expanded course outlines are now available for download on the book's page on the Springer website. A one-term course would cover material in the core chapters (1-4), supplemented by selections from one or more of the remaining chapters on statistical inference (Ch. 5), Markov chains (Ch. 6), stochastic processes (Ch. 7), and signal processing (Ch. 8—available exclusively online and specifically designed for electrical and computer engineers, making the book suitable for a one-term class on random signals and noise). For a year-long course, core chapters (1-4) are accessible to those who have taken a year of univariate differential and integral calculus; matrix algebra, multivariate calculus, and engineering mathematics are needed for the latter, more advanced chapters. At the heart of the textbook's pedagogy are 1,100 applied exercises, ranging from straightforward to reasonably challenging, roughly 700 exercises in the first four "core" chapters alone—a self-contained textbook of problems introducing basic theoretical knowledge necessary for solving problems and illustrating how to solve the problems at hand – in R and MATLAB, including code so that students can create simulations. New to this edition • Updated and re-worked Recommended Coverage for instructors, detailing which courses should use the textbook and how to utilize different sections for various objectives and time constraints • Extended and revised instructions and solutions to problem sets • Overhaul of Section

7.7 on continuous-time Markov chains • Supplementary materials include three sample syllabi and updated solutions manuals for both instructors and students

CONVERGING CLINICAL AND ENGINEERING RESEARCH ON NEUROREHABILITATION IV

PROCEEDINGS OF THE 5TH INTERNATIONAL CONFERENCE ON NEUROREHABILITATION (ICNR2020), OCTOBER 13-16, 2020

Springer Nature The book reports on advanced topics in the areas of neurorehabilitation research and practice. It focuses on new methods for interfacing the human nervous system with electronic and mechatronic systems to restore or compensate impaired neural functions. Importantly, the book merges different perspectives, such as the clinical, neurophysiological, and bioengineering ones, to promote, feed and encourage collaborations between clinicians, neuroscientists and engineers. Based on the 2020 International Conference on Neurorehabilitation (ICNR 2020) held online on October 13-16, 2020, this book covers various aspects of neurorehabilitation research and practice, including new insights into biomechanics, brain physiology, neuroplasticity, and brain damages and diseases, as well as innovative methods and technologies for studying and/or recovering brain function, from data mining to interface technologies and neuroprosthetics. In this way, it offers a concise, yet comprehensive reference guide to neurosurgeons, rehabilitation physicians, neurologists, and bioengineers. Moreover, by highlighting current challenges in understanding brain diseases as well as in the available technologies and their implementation, the book is also expected to foster new collaborations between the different groups, thus stimulating new ideas and research directions.
