International Financial Management McGraw-Hill Education International Financial Management is written based on two distinct parts: emphasis on the basics and emphasis on a managerial perspective. Risk Management in Investment Decisions Real Options Approach Anchor Academic Publishing (aap_verlag) In der US-amerikanischen Literatur zur Investitionsrechnung und deren Anwendungen, z.B. in der Unternehmensbewertung, findet sich bereits seit längerem der Vorwurf, dass die Kapitalwertmethode nicht in der Lage sei, den ökonomischen Wert von Investitionsmöglichkeiten richtig zu erfassen. Insbesondere vernachlässigt sie den Wert unternehmerischer Flexibilität. Um diesen zu berücksichtigen, wird vorge-schlagen, die Bewertung unternehmerscher Handlungsspielräume analog zur Bewertung von Finanzoptionen

vorzunehmen. Dabei werden unternehmerische Handlungsspielräume als Optionen auf reale Vermögensgegenstände betrachtet. Zur Unterscheidung gegenüber Finanzoptionen hat sich die Bezeichnung Realoptionen etabliert. Während in den USA bereits eine breit gefächerte Literatur zu diesen Themenkomplex entstanden ist, sind im deutschsprachigen Raum hierzu bisher nur wenige Stellungnahmen zu finden. Um jedoch den Wert von Investitionen für die Zukunft zu bestimmen, reichen die traditionellen Methoden der Unternehmens- und Investitionsbewertung nicht aus, denn sie berücksichtigen nicht die entstehenden Möglichkeiten und Flexibilität. So werden riskante oder außergewöhnliche Investitionsmöglichkeiten von den traditionellen Investitionsrechnungsverfahren als nicht lukrativ eingestuft, obwohl sie ein enormes Marktpotential besitzen. Solche Investitionsmöglichkeiten können mit dem Ansatz der Realoptionen genauer und unter strategischen Aspekten auch besser beurteilt werden. Es wurde seitens der Investoren der Wert einer solchen zukunfts- und risikobezogenen Bewertung erkannt. Aus diesem Grund wird der Ansatz der Realoptionen immer häufiger zur Bewertung eingesetzt. In Rahmen dieser Arbeit wird die Motivation, die hinter dem Realoptionsansatzes steht, hervorgehoben.

Loose-leaf Version for Microeconomics

Macmillan Higher Education Like no other text for the intermediate microeconomics course, Goolsbee, Levitt, and Syverson's *Microeconomics* bridges the gap between today's theory and practice, with a strong empirical dimension that lets students test theory and successfully apply it. With carefully crafted features and vivid examples, Goolsbee, Levitt, and Syverson's text helps answer two critical questions students ask, "Do people and firms really act as theory suggests?" and "How can someone use microeconomics in a practical way?"

The authors teach in economics departments and business schools and are

active empirical microeconomics researchers. Their grounding in different areas of empirical research allows them to present the evidence developed in the last 20 years that has tested and refined fundamental theories. Their teaching and professional experiences are reflected in an outstanding presentation of theories and applications.

Informing and Civilization

The aim of this book is to synthesize the role of information throughout the history of civilization's development. This will be defined through the convergence of (a) the cumulative evolution and revolution of the intellect (cognition as data, information, concepts, knowledge, and wisdom), (b) labor, and (c) politics which seek to control the environment, society, and the world, applying culture and infrastructure as tools. Whereas researchers reveal the myriad of dimensions of the social order and its historiography, this book provides a synthesis of the relations, which is limited to information (and its informing systems) and civilization within the context of *historiosophie* (history with judgment). The method presented in this book—the architectural approach to the dynamics of civilizational development—is a new layer over the quantitative history based on statistical data. In an architectural synthesis of civilization, we seek a “big picture” of “civilization waves” in order to develop some criteria-oriented views of the world and its future predictability. To understand the crises and conflicts of civilization which are driven by technology in recent centuries, such a synthesis as well as optimism for human proactive adaptation, survival, and, development must be undertaken. This approach to civilizational development should allow humans to eventually “reinvent the future” in a continuous manner. We, in due course, should be able to predict the “rate of change” and provide “civilization bridging solutions” based on original thinking. It is important to remind ourselves that information is as old as our world (about 15 billion years) because plants and trees and, in general, non-human nature produces all sorts of information, for example, the changing colors of plants and trees, which is associated with the different seasons. When the first living organisms appeared on our planet, they had ability to inform as well by changing forms, colors, signals and, so on. The first signs of life on our planet came into being about 3.85 billion years ago. Therefore, organism-based life on the Earth actually came to be over a period of just 130 million years. Hominids diverged from apes some 10-6 million years ago (instinct-driven info-communication, i.e., behavior less controlled by cognition), and the first humans (bipeds with large brains who could use tools and sound-driven info-communication) took form around 6-2.5 million years ago in Southeast Africa. *Homo symbolicus*, who could skillfully use language, appeared about 60,000 years ago. The origin of civilization some 6,000 years ago marks the beginning of the first advanced info-communication systems applied by humans, who could even record information.

The early 21st century has produced a fifth generation, based on autonomous agents and intelligent, database-assisted learning, that has been referred to as Web 2.0. The second edition of "The Theory and Practice of Online Learning" features updates in each chapter, plus four new chapters on current distance education issues such as connectivism and social software innovations. Science and Moral Imagination A New Ideal for Values in Science University of Pittsburgh Press The idea that science is or should be value-free, and that values are or should be formed independently of science, has been under fire by philosophers of science for decades. Science and Moral Imagination directly challenges the idea that science and values cannot and should not influence each other. Matthew J. Brown argues that science and values mutually influence and implicate one another, that the influence of values on science is pervasive and must be responsibly managed, and that science can and should have an influence on our values. This interplay, he explains, must be guided by accounts of scientific inquiry and value judgment that are sensitive to the complexities of their interactions. Brown presents scientific inquiry and value judgment as types of problem-solving practices and provides a new framework for thinking about how we might ethically evaluate episodes and decisions in science, while offering guidance for scientific practitioners and institutions about how they can incorporate value judgments into their work. His framework, dubbed "the ideal of moral imagination," emphasizes the role of imagination in value judgment and the positive role that value judgment plays in science.
