### LOCUST CONTROL HANDBOOK

---

*Editions Quae* It is of paramount importance to improve application techniques when controlling locust outbreaks in developing countries. Most available documents and publications on locust control deal mainly with insecticides, rather than application techniques and the required control equipment. The present guide book is designed to make up for this oversight. Basic principles for conducting spraying operations, descriptions of spraying equipment, especially for ultra low volume spraying, and specific locust control techniques are described in detail. The document explains how to get the most from treatments while minimizing the adverse effects to man and the environment. This book is aimed at decision-makers and all those involved in locust control who wish to improve their knowledge of application techniques.

---

### PRECALCULUS

---

*Brooks Cole* Faires' and DeFranza's PRECALCULUS provides students with an integrated review of algebra and trigonometry while focusing on the calculus concepts they'll need to know. The authors wrote this book because they believe students too often leave a precalculus class unprepared to go on. Although students who complete a precalculus course generally have had plenty of algebra and trigonometry review, they often lack the grounding in analysis and graphing necessary to make the transition to calculus. This streamlined text provides all the mathematics that students need -- it doesn't bog them down in review, or overwhelm them with too much, too soon. The authors have been careful to keep this book at a length that can be covered in one term.

## **AWS A5. 23/A5. 23M-2011, SPECIFICATION FOR LOW-ALLOY STEEL ELECTRODES AND FLUXES FOR SUBMERGED ARC WELDING**

---

---

This specification provides requirements for the classification of solid and composite carbon steel and low-alloy steel electrodes and fluxes for submerged arc welding. Electrode classification is based on chemical composition of the electrode for solid electrodes, and chemical composition of the weld metal for composite electrodes. Fluxes may be classified using a multiple pass classification system or a two-run classification system, or both, under this specification. Multiple pass classification is based on the mechanical properties and the deposit composition of weld metal produced with the flux and an electrode classified herein. Two-run classification is based upon mechanical properties only. Additional requirements are included for sizes, marking, manufacturing and packaging. The form and usability of the flux are also included. A guide is appended to the specification as a source of information concerning the classification system employed and the intended use of submerged arc fluxes and electrodes. This specification makes use of both the International System of Units (SI) and U.S. Customary Units. Since these are not equivalent, each must be used independently of the other.
