Facilities Management

The Dynamics of Excellence

John Wiley & Sons Facilities management continues to expand and develop in terms of the volume and diversity of commercial activity, with a significant influence upon organisational success and goal achievement. The two previous editions of Facilities Management have become established as key sources for all facilities management courses and forward thinking facilities managers, providing a strong blend of research-informed opportunities and practical, balanced advice for strategically orientated practitioners. This third edition builds on those foundations, focussing on the driving idea that excellent facilities management demands a responsive and dynamic approach to the positive impacts facilities can have on users operating within a world in flux. Within this overarching theme the book considers numerous contemporary issues facing facilities managers, within a framework that covers organisation, technology and process.

Sport Facility Operations Management

Routledge This is the first book to take a truly global look at facilities operations management in the sport industry. Sports facilities management is in the national news with reports from the BBC that three 2012 Olympic venues in London are being evaluated by accountants to see whether they will deliver value for money. The current estimate of government spending on the games is £9.3billion. There is also an ongoing debate about the fate of the 80,000 seat stadium that is being constructed for the games at a cost of £500million. Sport facilities of all shapes and sizes are an ingrained part of global sport management culture. As such, it is inevitable that students who enter into the field of sport management will interact with the management and operations of a sport facility at some point during their career. This textbook provides the theoretical foundation for sport facility operations management, and is supplemented both in the text and in the companion site containing: schematics, planning documents, sample forms, and sample ownership/ management structures. In addition, each author will infuse research and experiences from sport facilities around the world (North America; Europe; Middle East/ Asia; Australia and New Zealand) to ensure that a global perspective is at the core of this book. This book is published with the sport management lecturer and student in mind.

Loss Control Auditing

A Guide for Conducting Fire, Safety, and Security Audits

CRC Press As a critical function in monitoring workplace safety, loss control auditing provides an organizational assessment of safety program performance in relation to regulatory requirements and company policies. Principles of quality management dictate that measurement of an activity receives organizational attention and provides an excellent tool for communicating performance to management. A comprehensive audit, rather than individual metrics such as injury rate, helps to determine which aspects of a safety program are functioning well and which ones have room for improvement. *Loss Control Auditing: A Guide for Conducting Fire, Safety, and Security Audits* is a one-stop resource for both developing and executing a loss control audit program. Written for professionals in the fire service, loss prevention, and safety management as well as those studying the fields, this reference addresses loss control auditing from the perspectives of workplace safety, physical security, and fire risks. The text focuses on the three core areas of an audit: documentation review, physical inspection, and employee interviews. It also presents a three-phase model—pre-audit, audit, and post audit activities—which can be used for all three core areas. It includes detailed information to assist in the development of an effective audit program. The author discusses the foundational elements of an audit program, the written audit program and the audit protocol. Systemic auditing issues of audit scoring, auditor selection and training, audit logistics, and audit frequency are also addressed. The final section of the book discusses the opportunities that can arise in conducting an audit, including how an audit can be used as a training tool and the importance of involving employees in the audit process. The application of the information presented in this volume is facilitated by representative case studies included at the end of each chapter. An up-to-date reference, this text is unique in the depth of material presented and provides an excellent resource on how to develop and execute a loss control audit program.

The Safety Professional's Role

In Support of Industrial Facilities Operations and Maintenance (O&M)

Xlibris Corporation *The Safety Professional's Role: In Support of Industrial Facilities Operations and Maintenance (O&M)* discusses how the safety professional, in direct support of a manager (or management group) of an industrial facility, can provide the advice and support needed to control hazards, minimize risk and maximize workplace safety at these inherently dangerous locations and during potentially dangerous operations. Chemical processing, in one form or another, serves as the engine of a global economy. Raw materials, whether extracted by drilling and mining, grown and cultivated in crops, or recovered from reusable materials, must be refined and processed into useful bulk materials and chemicals. These processes usually involve work around or with chemicals that possess hazardous qualities such as flammability, explosiveness, toxicity, or reactivity. These refined materials and bulk chemicals are then delivered to in the next stage of manufacture where they are used responsibly to produce the goods and products that make modern day living more comfortable and enjoyable. It is this process of chemical refinement and safe use and handling of these chemicals in manufacturing that is explored in this text, particularly the practice of assessing and controlling the risk associated with the industrial use of these highly hazardous chemicals (HHCs). You may know this policy and practice as "Process Safety Management". Work with HHCs clearly increases the risks and hazards at the job site where they are being stored, used and processed. Facility managers responsible for managing the complexities of Maintenance and Operations (O&M) associated with industrial facilities, turn to trained, educated, and experienced safety professionals for reliable safety advice, training and management support. Industrial Safety professionals, be they General Safety Practitioner, or specialists such as Industrial Hygienist, Environmental Affairs Manager, Hazardous Waste Coordinator, Chemical Hygiene Officer, Project Safety Manager, or Occupational Health Nurse can benefit from the findings and suggestions presented in this text. *The Safety Professional's Role: In Support of Industrial Facilities Operations and Maintenance (O&M)* essentially serves as a roadmap of recommendations that a Safety Professional, engaged in O&M support, can use to be more responsive to the many needs of his or her process plant.

Measurement of Facilities Management Performance in Ghana's Public Hospitals

Springer Nature This book presents the concept of healthcare facilities management performance measurement (HCFMPM) using Ghana as a case study. It set forth in-depth theoretical and empirical underpinnings of performance measurement concepts for hospital facilities services, with the view to demonstrate critical performance dimensions to improve FM contributions and added value to healthcare delivery. The research approach adopted is mixed method encompassing qualitative interviews in case study setting and a questionnaire survey of sampled hospitals in Ghana. The book presents a number of useful tables, graphs as well as a pedagogic illustration of statistical analysis which are useful in understanding the concepts under reference. It develops a structural equation model for performance measurement of FM services. The book is of relevance to healthcare managers, facilities management practitioners and academics towards measuring and improving FM performance in hospitals. Although the data used in the analysis is based on the case study country Ghana, the result is by extension useful to several developing countries faced with the challenge to improve FM services delivery in public hospitals as well as other facilities management sectors.

Campus Service Workers Supporting First-Generation Students

Informal Mentorship and Culturally Relevant Support as Key to Student Retention and Success

Routledge This unique collection of testimonials, critical essays, and first-hand accounts demonstrates the significant contribution of campus service workers in supporting the retention and success of first-generation college students. Using a Freirean framework to ground individual stories, the text identifies ways in which campus workers connect with students, provide informal mentorship, and offer culturally relevant support during students' transition to college and beyond. Drawing on a range of interviews, case studies, and research studies, emphasis is placed on the unique challenges faced by first-generation and minority students such as cultural alienation, imposter syndrome, language barriers, and financial insecurity. Ultimately, the text dismantles notions of social hierarchies that separate workers and college students and encourages institutions to invest in these workers and their contribution to student well-being and success. This book will benefit researchers, academics, and educators with an interest in the higher education and student affair practice and higher education administration more broadly. Those specifically interested in multicultural education and the study of race and ethnicity within US higher educational contexts will also benefit from this book.

Business Model Innovation as a Dynamic Capability

Micro-Foundations and Case Studies

Springer Nature This study adopts a dynamic capabilities perspective to explore the activities and processes through which business model innovations arise in established organisations. New and innovative business models are fundamental to the commercialisation of the latest technologies, performance, and competitive advantage, as well as value creation for customers, the focal company and its ecosystem. Yet, our current understanding of how established companies design and implement new business models is limited by a lack of empirical research. Based on a review of relevant literature, business model innovation is presented and explored as a dynamic capability. The book subsequently uses proven methodologies to gather and analyse data from five case studies in the manufacturing, financial services, media, consulting, and healthcare industries. The framework developed here offers a novel understanding of how business model innovations come about in established organisations, a practice it dubs 'crafting business models in statu nascendi'.
