General practitioners, because of their day-to-day direct and continuing contact with patients, play a role not only in primary prevention and education of patients, but also in motivating their patients to accept secondary prevention and screening, some of it carried out by general practitioners themselves. These preventive activities are in addition to their traditional role in the care and management of patients with cancer at home, and increasingly, their role in active treatment. In view of the importance of the general practitioner in the

"Europe against Cancer" programme, the European Commission, with a view to providing general practitioners with up-to-date useful information, has sponsored the production of this series of publications on organ based cancers, especially written for general practitioners. MICHEL RICHONNIER Coordinator of the "Europe against Cancer" programme, Commission of the European Communities, Brussels Preface The present textbook is the second in the series published by the Commission of the European Communities within the context of the "Europe Against Cancer" Programme. After lung cancer, it was felt that priority should be given to breast cancer, the most frequent neoplastic disease among European women. **Stories of Italy The Metal Shaper David J. Gingery Publishing, LLC** Build your own Metal Shaper. Exotic is a mild adjective when applied to this shaper. Obsolete in modern industry, of course, because milling machines do the work much faster and cheaper. But you can't beat a shaper for simplicity and economy in the home shop. The shaper has a 6" stroke and a mean capacity of 5" x 5", variable and adjustable stroke length, automatic variable cross feed and graduated collars. You will be proud to add this machine to your shop. **Eating Across America A Foodie's Guide to Food Trucks, Street Food and the Best Dish in Each State Mango Media Inc.** Best Daym Takeout Drive-ins, diners and dives: Daymon Patterson, author of Eating Across America, is better known as Daym Drops, an American food critic, YouTube celebrity, and television presenter. Single-crystal nickel turbine blades are used because of their superior creep, stress rupture, melt resistance, and thermomechanical fatigue capabilities. Single-crystal materials have highly orthotropic properties making the position of the crystal lattice relative to the part geometry a significant and complicating factor. A fatigue failure criterion based on the maximum shear stress amplitude on the 24 octahedral and 6 cube slip systems is presented for single-crystal nickel superalloys (FCC crystal). This criterion greatly reduces the scatter in uniaxial fatigue data for PWA 1493 at 1,200 F in air. Additionally, single-crystal turbine blades used in the Space Shuttle main engine high pressure fuel turbopump/alternate turbopump are modeled using a three-dimensional finite element (FE) model. This model accounts for material orthotropy and crystal orientation. Fatigue life of the blade tip is computed using FE stress results and the failure criterion that was developed. Stress analysis results in the blade attachment region are also presented. Results demonstrate that control of crystallographic orientation has the potential to significantly increase a component's resistance to fatigue crack growth without adding additional weight or cost. But understanding Marx is indispensable for anyone who wants to grasp why capitalism is a system of exploitation, instability and repeated crises. Joseph Choonara here introduces readers to some crucial Marxist approaches - as developed above all in the three volumes of Capital. He also outlines how this can be applied to capitalism as it has developed since the 19th century.
