FINANCIAL MARKETS AND INSTITUTIONS

"The last 30 years have been dramatic for the financial services industry. In the 1990s and 2000s, boundaries between the traditional industry sectors, such as commercial banking and investment banking, broke down and competition became increasingly global in nature. Many forces contributed to this breakdown in interindustry and intercountry barriers, including financial innovation, technology, taxation, and regulation. Then in 2008-2009, the financial services industry experienced the worst financial crisis since the Great Depression. Even into the mid-2010s, the U.S. and world economies have not recovered from this crisis. It is in this context that this book is written. As the economic and competitive environments change, attention to profit and, more than ever, risk become increasingly important. This book offers a unique analysis of the risks faced by investors and savers interacting through both financial institutions

and financial markets, as well as strategies that can be adopted for controlling and better managing these risks. Special emphasis is also put on new areas of operations in financial markets and institutions such as asset securitization, off-balance-sheet activities, and globalization of financial services"--

The commission and the report were implemented after Congress passed an act in 2009 to review and prevent fraudulent activity. The report details, among other things, the periods before, during, and after the crisis, what led up to it, and analyses of subprime mortgage lending, credit expansion and banking policies, the collapse of companies like Fannie Mae and Freddie Mac, and the federal bailouts of Lehman and AIG. It also discusses the aftermath of the fallout and our current state. This report should be of interest to anyone concerned about the financial situation in the U.S. and around the world. ECONOMICS: AN INTRODUCTION TO TRADITIONAL AND PROGRESSIVE VIEWS

AN INTRODUCTION TO TRADITIONAL AND PROGRESSIVE VIEWS

Routledge This classic text offers a broader intellectual foundation than traditional principles textbooks. It introduces students to both traditional economic views and their progressive critique. Revised, expanded, and updated for this new edition, the text puts the study of microeconomics, macroeconomics, and globalization in their historical context. While covering the same topics as a traditional text, it also offers a richer discussion of economic history and the history of economic thought, including the ideas of Karl Marx, Thorstein Veblen, and John Maynard Keynes. This allows students to see economics as a way of understanding the world - as a lens for social analysis - rather than, as immutable truth or ideal to which the world should be molded. This completely revised edition incorporates new chapters on microeconomics and macroeconomics, as well as more graphs to enhance the theoretical presentations. Unlike the previous editions, it includes many pedagogical tools to encourage student participation and learning. Each of the 56 chapters opens with Learning Objectives, and key terms appear in boldface within the text and are listed at the end of each chapter. Other end-of-chapter material includes Summary of Major Points, Analytical Questions, and References. An online Instructor's Manual is available to professors who adopt the text.

INSTITUTIONAL LEARNING AND KNOWLEDGE TRANSFER ACROSS EPISTEMIC COMMUNITIES

NEW TOOLS OF GLOBAL GOVERNANCE

Springer Science & Business Media Over the past several decades, as the pace of globalization has accelerated, operational issues of international coordination have often been overlooked. For example, the global financial crisis that began in 2007 is attributed, in part, to a lack of regulatory oversight. As a result, supranational organizations, such as the G-20, the World Bank, and the International Monetary Fund, have prioritized strengthening of the international financial architecture and providing opportunities for dialogue on national policies, international co-operation, and international financial institutions. Prevailing characteristics of the global economic systems, such as the increasing power of financial institutions, changes in the structure of global production, decline in the authority of nation-states over their national economy, and creation of global institutional setting, e.g., global governance have created the conditions for a naturally evolving process towards enabling national epistemic communities to create institutions that comply with global rules and regulations can control crises. In this context, transfer of technical knowledge from the larger organizations and its global epistemic communities to member communities is becoming a policy tool to "convince" participants in the international system to have similar ideas about which rules will govern their mutual participation. In the realm of finance and banking regulation, the primary focus is on transfer of specialized and procedural knowledge in technical domains (such as accounting procedures, payment systems, and corporate governance principles), thereby promoting institutional learning at national and local levels. In this volume, the authors provide in-depth analysis of initiatives to demonstrate how this type of knowledge generated at the international organization level, is codified into global standards, and disseminated to members, particularly in the developing world, where the legal and regulatory infrastructure is often lacking. They argue that despite the challenges, when a country intends to join the global system, its institutions and economic structures need to move toward the global norms. In so doing, they shed new light on the dynamics of knowledge transfer, financial regulation, economic development, with particular respect to supporting global standards and avoiding future crises.
