For decades mums have been told that 'breast is best', that breastfeeding is the single-most important thing we can do for our children. Despite this huge pressure on modern mums, the vast majority of us end up using formula. And we feel guilty. In Guilt-Free Bottle Feeding award-winning journalist Madeleine Morris and paediatrician Dr Sasha Howard challenge the simplistic message of 'breast is best', revealing what everybody knows, but nobody says out loud - that bottle fed babies can grow up to be perfectly happy, healthy and smart. With a thorough yet accessible analysis of health science, parenting sociology and the modern media, the authors provide a balanced, much-needed and long-overdue voice, showing mothers who don't exclusively breastfeed why they are not failures. A mix of political and practical, Guilt-Free Bottle-Feeding also offers comprehensive advice on feeding, including: Choosing a formula, and choosing a bottle Sterilising and preparing a feed How to promote bonding while bottle-feeding Moving from breast to bottle, and mixed feeding In an era where the pressure on mums is greater than ever before, Guilt-Free Bottle Feeding resets the conversation around infant feeding, supporting all families regardless of how they feed their babies. This is not an anti-breastfeeding book. This is an anti-guilt book. www.guiltfreebottlefeeding.com **Pediatric Allergy, E-Book Principles and Practice** Elsevier Health Sciences With complete, concise coverage of prevention, indications, diagnosis, and treatment, Pediatric Allergy, 4th Edition, is your go-to resource for current, clinically-focused content in the rapidly changing field of allergies and immune-mediated diseases in children. Baby becomes distressed at feeding times and refuses to feed or eats very little despite obvious hunger. Why won't he/she eat? This is a question parents ask numerous health professionals while searching for a solution. Babies are typically diagnosed with one, two or three medical conditions to explain their aversive feeding behavior during brief appointments. Unfortunately, behavioral causes are often overlooked. Consequently, many parents don't receive an effective solution from the health professionals they consult. This is why this book is so necessary. In *Your Baby's Bottle-feeding Aversion*, Rowena describes the various reasons babies display aversive feeding behavior, explains how the reader can identify the cause, and describes effective solutions. Included are step-by-step instructions on how to resolve a behavioral feeding aversion that occurs as a result of being repeatedly pressured to feed - the most common of all reasons for babies to become averse to bottle-feeding. *Your Baby's Bottle-feeding Aversion* provides practical professional feeding advice that not only makes good sense, it works! **The Rough Guide to Australia (Travel Guide eBook)** Apa Publications (UK) Limited World-renowned 'tell it like it is' guidebook Discover Australia with this comprehensive, entertaining, 'tell it like it is' Rough Guide, packed with comprehensive practical information and our experts' honest and independent recommendations. Advanced Health Assessment & Clinical Diagnosis in Primary Care - E-Book Elsevier Health Sciences Take the 'next step' in health assessment! *Advanced Health Assessment and Clinical Diagnosis in Primary Care*, 5th Edition goes beyond basic history and physical examination to help you master the diagnostic reasoning process. You'll develop this key skill by following assessment guidelines that focus on a specific complaint rather than beginning with a previously established diagnosis or disease entity. Written by advanced practice nursing experts Joyce Dains, Linda Baumann, and Pamela Scheibel, this edition includes new chapters on evidence-based preventive health screening and on heartburn and indigestion, along with a new full-color design. Master the differential diagnosis process outlined in this book, and you'll be able to accurately diagnose the majority of patients seen in today's primary care settings. A clear, consistent diagnostic reasoning process takes you to the next step of health assessment — beyond basic history and physical examination to diagnostic reasoning. Diagnostic Reasoning: Focused History sections use 'self-questions' to walk you through the thinking process involved in obtaining a pertinent, relevant, problem-specific history that will assist in differential diagnosis. Diagnostic Reasoning: Focused Physical Examination sections explain how to perform more advanced diagnostic techniques and interpret the findings. Key Questions guide you through assessment and toward an accurate diagnosis by listing questions to ask the patient, followed by explanations of what the patient's responses might signify. Laboratory and Diagnostic Studies sections outline the types of studies that might be appropriate based on the focused history and focused physical examination. Differential Diagnosis sections offer the most common diagnoses for each patient problem and summarize the history and physical examination findings, along with recommended laboratory and diagnostic studies. Differential Diagnosis tables provide a quick-reference summary of possible diagnoses for each patient problem. Evidence-Based Practice boxes — more than 30 are NEW — summarize the scientific evidence related to the diagnosis of patient problems. Alphabetical Table of Contents provides a convenient listing of common health problems.

HIV and Breastfeeding The untold story Pinter & Martin In the early 1980s it was discovered that HIV, the virus that causes AIDS, could be passed through a mother's milk to her baby. Almost overnight in the industrialised countries, and later in the African countries most ravaged by HIV, breastfeeding became an endangered practice. But in the rush to reduce transmission of HIV, everything we already knew about breastfeeding's life-saving effects was overlooked, with devastating consequences for mothers and babies. In *HIV and Breastfeeding: the untold story*, former IBCLC Pamela Morrison, an acknowledged authority on HIV and breastfeeding, reveals how women in the world's most poverty-stricken areas were persuaded to abandon breastfeeding as part of a short-sighted and deadly policy that led to a humanitarian disaster. The dilemma that breastfeeding, an act of nurturing which confers food, comfort and love, could be at once life-saving yet lethal, has been called 'the ultimate paradox'. This critical account reveals how vital breastfeeding is, even in the most difficult of circumstances, and examines the lessons that can be learned from the mistakes of the past - which is particularly relevant as we deal with the consequences for mothers and babies of another global pandemic, Covid-19. With detailed information for HIV-positive mothers and their caregivers, and success stories from mothers themselves, this book is essential reading for anyone involved in protecting and supporting breastfeeding, or with a need for evidence-based information about breastfeeding and HIV.
