SIMPLE GUIDE ON HYDROPONICS GARDENING

EXPERT TIPS FOR BEGINNERS AND INTERMEDIATE GARDENERS

Martha Stone Soil-less gardening may seem like an unbelievable idea, but many gardeners have discovered utter joy in Hydroponics Gardening. Some people call it art, others label it science, but many would agree that it is an adventure, similar to choosing a road less taken. Hydroponics Gardening is a branch of hydroculture which grows plants in a water-based solution, taking soil out of the equation – certainly not the type of gardening you see every day. Hydroponics Gardening is a material aimed at inspiring gardeners to try their hands, or thumbs, into a non-conventional way of growing plants. It covers all the essential aspects of this type of gardening, beginning with choosing the appropriate gardening system, the requirements of setting up your own hydroponics garden, as well as how to gain control over certain elements to make your plants grow successfully in your hydroponic garden. This book also covers how to naturally and chemically control pests in your garden and ways to ensure that your plants receive the right lighting and humidity. It is also essential to know that most plants – fruits, herbs and vegetables, may be grown hydroponically. However, it is important to note that some may thrive better in a hydroponic garden because of certain conditions, such as the limitations of your space, the appropriateness of your chosen system and the extensiveness of your experience in hydroponic gardening. This resource material will point you to the right crops that can successfully be grown in a hydroponic garden, as well as some pointers on how to extend your plants' growing season and ensure excellent yields during harvest time. With its own fair share of challenges and rewards, Hydroponics Gardening is a great way to unleash the powers of your green thumb, ensure healthy consumption of fruits and vegetables as well as promote sustainability from the garden to the dining table.

DIY Hydroponic Gardens takes the mystery out of growing in water. With practical information aimed at home DIYers, author Tyler Baras (Farmer Tyler to his fans) shows exactly how to build, plant, and maintain more than a dozen unique hydroponic systems, some of which cost just a few dollars to make. Growing produce without soil offers a unique opportunity to have a productive garden indoors or in areas where soil is not present. An expert in hydroponics, Baras has developed many unique and easy-to-build systems for growing entirely in water. In DIY Hydroponic Gardens, he shows with step-by-step photos precisely how to create these systems and how to plant and maintain them. All the information you need to get started with your home hydroponic system is included, from recipes for nutrient solutions, to light and ventilation sources, to specific plant-by-plant details that explain how to grow the most popular vegetables in a self-contained, soilless system. Even if you live in an area where water is scarce, a hydroponic system is the answer you've been looking for. Hydroponic systems are sealed and do not allow evaporation, making water loss virtually nonexistent.
