Much of the important material discussed here is unknown except to specialists, and these studies offer access to its interpretation to a wider audience. They cover a wide range of time and place, from the earliest days of the Greek theatre to the Roman period, with special emphasis on the neglected Hellenistic period, which is especially rich in documentary evidence. The passion and attention to detail of the flight control team members, who are always ready to step up when things do not go well, is a hallmark of NASA human spaceflight operations. With tremendous support from the ISS program office and engineering community, the flight control team has made the International Space Station and the programs before it a success. The Challenge of Obesity in the WHO European Region and the Strategies for Response Summary* World Health Organization *In a brief, clear and easily accessible way, this summary illustrates the dynamics of the obesity epidemic and its impact on public health throughout the WHO European Region, particularly in eastern countries. It describes how factors that increase the risk of obesity are shaped in different settings, such as the family, school, community and workplace. It makes both ethical and economic arguments for accelerating action against obesity, and analyses effective programs and policies in different government sectors, such as education, health, agriculture and trade, urban planning and transport. The summary also describes how to design policies and programs to prevent obesity and how to monitor progress, and calls for specific action by stakeholders: not only government sectors but also the private sector - including food manufacturers, advertisers and traders - and professional consumers' and international and intergovernmental organizations such as the European Union. Through the model of religious economy, it traces the competition between Muslim, Christian and Hindu religious entrepreneurs that transformed Islam into a proselytising global brand. Drawing Indian, Arab, Iranian and Tatar Muslims together with Scottish missionaries and African-American converts, Nile Green brings to life the local sites of globalisation where Islam was repeatedly reinvented in modern times. Evoking terrains of exchange from Russia's imperial borderlands to the factories of Detroit and the ports of Japan, he casts a microhistorian's eye on the innovative new Islams that emerged from these sites of contact. Drawing on a multilingual range of materials, the book challenges the idea that globalisation has given rise to a unified "global Islam." Instead, it reveals the forces behind the fracturing of Islam in the hands of feuding and fissiparous "religious firms". Terrains of Exchange not only presents global history as Islamic history. It also reveals the forces of that history at work in the world today. Where Dreams May Come Incubation Sanctuaries in the Greco-Roman World* BRILL *In this book, Gil H. Promoting Cardiovascular Health in the Developing World A Critical Challenge to Achieve Global Health* National Academies Press *Cardiovascular disease (CVD), once thought to be confined primarily to industrialized nations, has emerged as a major health threat in developing countries. Cardiovascular disease now accounts for nearly 30 percent of deaths in low and middle income countries each year, and is accompanied by significant economic repercussions. Yet most governments, global health institutions, and development agencies have largely overlooked CVD as they have invested in health in developing countries. Recognizing the gap between the compelling evidence of the global CVD burden and the investment needed to prevent and control CVD, the National Heart, Lung, and Blood Institute (NHLBI) turned to the IOM for advice on how to catalyze change. In this report, the IOM recommends that the NHLBI, development agencies, nongovernmental organizations, and governments work toward two essential goals: creating environments that promote heart healthy lifestyle choices and help reduce the risk of chronic diseases, and building public health infrastructure and health systems with the capacity to implement programs that will effectively detect and reduce risk and manage CVD. To meet these goals, the IOM recommends several steps, including improving cooperation and collaboration; implementing effective and feasible strategies; and informing efforts through research and health surveillance. Without better efforts to promote cardiovascular health, global health as a whole will be undermined. Computerworld* *For more than 40 years, Computerworld has been the leading source of technology news and information for IT influencers worldwide. Computerworld's award-winning Web site (Computerworld.com), twice-monthly publication, focused conference series and custom research form the hub of the world's largest global IT media network. Nordic Nutrition Recommendations 2012 Integrating nutrition and physical activity* Nordic Council of Ministers *The Nordic countries have collaborated in setting guidelines for dietary composition and recommended intakes of nutrients for several decades through the joint publication of the Nordic Nutrition Recommendations (NRR). This 5th edition, the NRR 2012, gives Dietary Reference Values (DRVs) for nutrients, and compared with earlier editions more emphasis has been put on evaluating the scientific evidence for the role of food and food patterns contributing to the prevention of the major diet-related chronic diseases. Recommendations on physical activity are included and interaction with physical activity has been taken into account for the individual nutrient recommendations wherever appropriate. A chapter on sustainable food consumption has been added. A Nordic perspective has been accounted for in setting the reference values. The NRR 2012 has used an evidence-based and transparent approach in assessing associations between nutrients and foods and certain health outcomes. Systematic reviews form the basis for the recommendations of several nutrients and topics, while a less stringent update has been done for others. The systematic reviews and individual chapters have been peer reviewed and the systematic reviews are published in the Food & Nutrition Research journal. The draft chapters were subject to an open public consultation. Recommendations have been changed only when sufficient scientific evidence has evolved since the 4th edition. The primary aim of the NRR 2012 is to present the scientific background of the recommendations and their application. A secondary aim is for the NRR 2012 to function as a basis for the national recommendations that are adopted by the individual* **Repositioning Nutrition as Central to Development A Strategy for Large Scale Action** World Bank Publications *Persistent malnutrition is contributing not only to widespread failure to meet the first MDG--to halve poverty and hunger--but to meet other goals in maternal and child health, HIV/AIDS, education, and gender equity. The choice is now between continuing to fail, or to finally make nutrition central to development. In the book's first half, experts present a descriptive summary of youth obesity trends in ten world regions, broken down by age group, gender, socioeconomic status, and risk factors. Complementing these findings, part two reviews the evidence base regarding the variables, separately and in combination, having the most significant impact on young people's development of obesity, including: • Genetic and nutrigenomic factors. • Environmental and psychosocial factors, such as family shopping and eating habits and access to healthful foods. • Neuroendocrine regulation. • Prenatal and neonatal factors (e.g., gestational diabetes of the mother). • Dietary factors, from nutrient content to young people's food preferences. • Physical activity versus sedentary behavior. *Epidemiology of Obesity in Children and Adolescents* is necessary reading for the range of professionals involved in curtailing this epidemic, including public health specialists, epidemiologists, pediatricians, nurses, nutritionists, psychologists, health educators, and policymakers. **Handbook on Animal-Assisted Therapy Theoretical Foundations and Guidelines for Practice** Elsevier The original edition was the first book to provide a comprehensive overview of the ways in which animals can assist therapists with treatment of specific populations, and/or in specific settings. Crisis Management in the Food and Drinks Industry: A Practical Approach** Springer Science & Business Media Few titles could be timelier than the second edition of *Crisis Management in the Food and Drinks Industry - A Practical Approach*. The world is worrying about a human pandemic arising from the avian flu epidemic that is spreading from the Far East, the implications of which could be as great for the food industry as were the outbreaks of foot and mouth disease and BSE. This practical and greatly expanded edition by media and public relations veteran Colin Doeg focuses on the communications aspects of dealing with a crisis. It is global in its coverage of the subject, reviewing practices and requirements in countries ranging from the USA and the UK to Australia and New Zealand. Doeg offers advice ranging from preparing for the unthinkable to the dramatic expansion of the Internet, avoiding being caught off-guard by a situation, the ramifications of product tampering and managing an actual crisis. Advice is also offered on dealing with extremist organizations and terrorist threats as well as bioterrorism - "a clear and present danger" - and a number of problems facing the food industry, including the practice of selling meat unfit for human consumption and the threat posed by the increasing toxicity of fish due to the rising pollution of the world's oceans. In a special late chapter - written only three months before publication - the author looks ahead to events which he believes will shape the world of crisis management in the future, including the empowering influence of the Internet during the 2004 Asian Tsunami, the discovery of the illegal dye Sudan 1 (Red) in millions of food products and the fears of a pandemic arising from the spreading outbreak of avian flu. Examples of typical documents like a crisis plan for a business, a crisis checklist, a press release announcing a product recall, an announcement to employees and a checklist for anyone dealing with a threatening phone call are provided. Also included is a list of sources of information and assistance in the event of a product crisis. *Crisis Management in the Food and Drinks Industry* is the only title dealing specifically with this crucial subject in relation to the food industry. As such, it is relevant not only to those in the food industry, but also to marketing and senior management in general in the fields of agriculture, public health and law enforcement. **Progress in Obesity Research: 7** John Libbey Eurotext Obesity remains a prevalent disorder in the Western world and is a serious public health concern because it is a significant forerunner of major chronic debilitating diseases, including diabetes, hypertension, lipid disorders and coronary atherosclerosis. **The New Psychology of Health Unlocking the Social Cure** Routledge Why do people who are more socially connected live longer and have better health than those who are socially isolated? Why are social ties at least as good for your health as not smoking, having a good diet, and taking regular exercise? Why is treatment more effective when there is an alliance between therapist and client? Until now, researchers and practitioners have lacked a strong theoretical foundation for answering such questions. This ground-breaking book fills this gap by showing how social identity processes are key to understanding and effectively managing a broad range of health-related problems. Integrating a wealth of evidence that the authors and colleagues around the world have built up over the last decade, *The New Psychology of Health* provides a powerful framework for reconceptualising the psychological dimensions of a range of conditions - including stress, trauma, ageing, depression, addiction, eating behaviour, brain injury, and pain. Alongside reviews of current approaches to these various issues, each chapter provides an in-depth analysis of the ways in which theory and practice can be enriched by attention to social identity processes. Here the authors show not only how an array of social and structural factors shape health outcomes through their impact on group life, but also how this analysis can be harnessed to promote the delivery of 'social cures' in a range of fields. This is a must-have volume for service providers, practitioners, students, and researchers working in a wide range of disciplines and fields, and will also be essential reading for anyone whose goal it is to improve the health and well-being of people and communities in their care. **Health Risks of Weight Loss** Healthy Living Inst This practical guide brings together research on the health effects of dieting and rapid weight loss. **The Future of the Public's Health in the 21st Century** National Academies Press The anthrax incidents following the 9/11 terrorist attacks put the spotlight on the nation's public health agencies, placing it under an unprecedented scrutiny that added new dimensions to the complex issues considered in this report. *The Future of the Public's Health in the 21st Century* reaffirms the vision of Healthy People 2010, and outlines a systems approach to assuring the nation's health in practice, research, and policy. This approach focuses on joining the unique resources and perspectives of diverse sectors and entities and challenges these groups to work in a concerted, strategic way to promote and protect the public's health. Focusing on diverse partnerships as the framework for public health, the book discusses: The need for a shift from an individual to a population-based approach in practice, research, policy, and community engagement. The status of the governmental public health infrastructure and what needs to be improved, including its interface with the health care delivery system. The roles nongovernment actors, such as academia, business, local communities and the media can play in creating a healthy nation. Providing an accessible analysis, this book will be important to public health policy-makers and practitioners, business and community leaders, health advocates, educators and journalists. **Proceedings Lifestyle Management in Health and Social Care** John Wiley & Sons *Lifestyle Management in Health and Social Care* is a one-stop handbook for health and social care professionals that assists in the provision of a wide range of professional lifestyle advice, treatment or condition specific therapy.
