Nudge

Improving Decisions About Health, Wealth, and Happiness

Penguin Now available: **Nudge: The Final Edition** The original edition of the multimillion-copy New York Times bestseller by the winner of the Nobel Prize in Economics, Richard H. Thaler, and Cass R. Sunstein: a revelatory look at how we make decisions—for fans of Malcolm Gladwell's *Blink*, Charles Duhigg's *The Power of Habit*, James Clear's *Atomic Habits*, and Daniel Kahneman's *Thinking, Fast and Slow* Named a Best Book of the Year by *The Economist* and the *Financial Times* Every day we make choices—about what to buy or eat, about financial investments or our children's health and education, even about the causes we champion or the planet itself. Unfortunately, we often choose poorly. *Nudge* is about how we make these choices and how we can make better ones. Using dozens of eye-opening examples and drawing on decades of behavioral science research, Nobel Prize winner Richard H. Thaler and Harvard Law School professor Cass R. Sunstein show that no choice is ever presented to us in a neutral way, and that we are all susceptible to biases that can lead us to make bad decisions. But by knowing how people think, we can use sensible “choice architecture” to nudge people toward the best decisions for ourselves, our families, and our society, without restricting our freedom of choice.

DISKO (Second Edition)

The second edition of *DISKO*, a photography book about Lithuanian village discos by Andrew Miksys. "The discos of Lithuania were once Soviet offices, detention centers, weapons storage, rare Lithuanian mushroom-packing plants... who knows? ...Andrew's photographs capture a generation born to bewilderment: the disko kids still carry the past in their eyes and hard-to-maintain indifference, but they are the creatures of a very brief moment in time, one that will never ever exist again except in these pictures. Miksys has caught a fleeting world that emanates death and hope in the pulses of ephemeral disco lights." - Andrei Codrescu For ten years Andrew Miksys traveled the back roads of Lithuania photographing teenagers in village discos (2000-2010). Most of these discos are located in Soviet-era culture houses where Miksys would sometimes find discarded Lenin paintings, old Soviet movie posters, gas masks, and other remnants of the Soviet Union. He became fascinated by all this debris of a dead empire and the teenagers who visited the clubs. It seemed like a perfect backdrop to make a series of photographs about young people in Lithuania, a crumbling past, and the uncertain future of a new generation all together in one room.

Lina Bo Bardi, Drawings

Princeton University Press The first authoritative collection of drawings by legendary modern architect Lina Bo Bardi Lina Bo Bardi (1914-92) was one of the most prolific and visionary architects of the twentieth century. Raised in Italy under Mussolini's Fascist regime and emigrating to Brazil after World War II, she championed the power of architecture and design to embrace everyday life. Her boldly modernist designs range from concrete-and-glass structures like the São Paulo Museum of Art and the culture and leisure center SESC Pompéia to furniture and jewelry. This is the first book to examine one of the most intimate and expressive features of her life and work, but one she rarely shared with the public—drawing. Bo Bardi produced thousands of drawings in her lifetime, from picturesque landscapes drawn when she was a child, to sketches made as part of her daily routine as an architect, to fanciful drawings that show different aspects of her private life. In this beautifully illustrated book, Zeuler Lima, the world's leading authority on Bo Bardi, brings together a careful selection of these and other drawings, many of them never published until now. Bo Bardi drew on card stock, tracing paper, regular paper, and newsprint. She used pencils, watercolor, gouache, ballpoint pens, and felt-tips, producing drawings that combined surrealist elements with an eye for color and joyful forms. Lina Bo Bardi, Drawings sheds critical light on the creative sensibility behind some of the twentieth century's most striking modernist designs, and provides a rare window into the design practice

of an architect like no other. Published in association with the Fundació Joan Miró Exhibition schedule: Fundació Joan Miró, Barcelona February 15-May 19, 2019

High Dynamic Range Image Reconstruction

Morgan & Claypool Publishers High dynamic range imaging (HDRI) is an emerging field that has the potential to cause a great scientific and technological impact in the near future. Although new, this field is large and complex, with non-trivial relations to many different areas, such as image synthesis, computer vision, video and image processing, digital photography, special effects among others. For the above reasons, HDRI has been extensively researched over the past years and, consequently, the related scientific literature is vast. As an indication that the field is reaching maturity, tutorials and books on HDRI appeared. Moreover, this new resource has already reached interested practitioners in various application areas. In this book, we do not aim at covering the whole field of high dynamic range imaging and its applications, since it is a broad subject that is still evolving. Instead, our intent is to cover the basic principles behind HDRI and focus on one of the currently most important problems, both theoretically and practically. That is, the reconstruction of high dynamic range images from regular low dynamic range pictures. Advanced High Dynamic Range Imaging

Theory and Practice

CRC Press Imaging techniques seek to simulate the array of light that reaches our eyes to provide the illusion of sensing scenes directly. Both photography and computer graphics deal with the generation of images. Both disciplines have to cope with the high dynamic range in the energy of visible light that human eyes can sense. Traditionally photography and computer graphics took different approaches to the high dynamic range problem. Work over the last ten years though has unified these disciplines and created powerful new tools for the creation of complex, compelling and realistic images. This book provides a practical introduction to the emerging new discipline of high dynamic range imaging that combines photography and computer graphics. By providing detailed equations and code, the book gives the reader the tools needed to experiment with new techniques for creating compelling images. A supplemental website contains downloads and additional information.

The Biodiesel Solution

How Biodiesel Is Making a Difference for Our Future

Biodiesel: Cleaner, Safer and Made in America If you want to succeed as a business or world leader you have to be decisive and persistent, making sure no opportunities are squandered. Whatever is wasteful should be made productive. This is the concept behind the advent of the biodiesel industry, which does exactly that. Biodiesel turns waste into energy, making it a mainstream fuel source that provides an array of environmental, economic, and other societal benefits. Yet many people know little about it, and about how biodiesel could be benefiting them. In this book, you'll learn about some of the overlooked capabilities of biodiesel, including that biodiesel is environmentally beneficial, burning much cleaner than fossil diesel, reducing greenhouse gas emissions. Biodiesel also makes efficient use of agricultural byproducts and waste that might otherwise go to landfills. Blended it petrodiesel, it extends critical US fuel reserves and offers a domestic solution to power our infrastructure. The biodiesel industry puts Americans to work, supporting 64,000 jobs in just 2016, a figure that's sure to grow if federal and state policies continue to support domestic production. When American lives are fueled by biodiesel, their wallets are, too. Pat Black will show you how building a stronger biodiesel industry is an easy solution not only for our environment, but also for our economy--creating badly needed jobs with fair wages. Biodiesel: cleaner, safer and made in America.
