A Guide to Teaching in the Active Learning Classroom History, Research, and Practice

Stylus Publishing, LLC While Active Learning Classrooms, or ALCs, offer rich new environments for learning, they present many new challenges to faculty because, among other things, they eliminate the room's central focal point and disrupt the conventional seating plan to which faculty and students have become accustomed. The importance of learning how to use these classrooms well and to capitalize on their special features is paramount. The potential they represent can be realized only when they facilitate improved learning outcomes and engage students in the learning process in a manner different from traditional classrooms and lecture halls. This book provides an introduction to ALCs, briefly covering their history and then synthesizing the research on these spaces to provide faculty with empirically based, practical guidance on how to use these unfamiliar spaces effectively. Among the questions this book addresses are: • How can instructors mitigate the apparent lack of a central focal point in the space? • What types of learning activities work well in the ALCs and take advantage of the affordances of the room? • How can teachers address familiar classroom-management challenges in these unfamiliar spaces? • If assessment and rapid feedback are critical in active learning, how do they work in a room filled with circular tables and no central focus point? • How do instructors balance group learning with the needs of the larger class? • How can students be held accountable when many will necessarily have their backs facing the instructor? • How can instructors evaluate the effectiveness of their teaching in these spaces? This book is intended for faculty preparing to teach in or already working in this new classroom environment; for administrators planning to create ALCs or experimenting with provisionally designed rooms; and for faculty developers helping teachers transition to using these new spaces.

Disrupting the Culture of Silence

Confronting Gender Inequality and Making Change in Higher Education

Stylus Publishing, LLC  **CHOICE 2015 Outstanding Academic Title** What do women academics classify as challenging, inequitable, or "hostile" work environments and experiences? How do these vary by women's race/ethnicity, rank, sexual orientation, or other social locations? How do academic cultures and organizational structures work independently and in tandem to foster or challenge such work climates? What actions can institutions and individuals-independently and collectively-take toward equity in the academy? Despite tremendous progress toward gender equality and equity in institutions of higher education, deep patterns of discrimination against women in the academy persist. From the "chilly climate" to the "old boys' club," women academics must navigate structures and cultures that continue to marginalize, penalize, and undermine their success. This book is a "tool kit" for advancing greater gender equality and equity in higher education. It presents the latest research on issues of concern to them, and to anyone interested in a more equitable academy. It documents the challenging, sometimes hostile experiences of women academics through feminist analysis of qualitative and quantitative data, including narratives from women of different races and ethnicities across disciplines, ranks, and university types. The contributors' research draws upon the experiences of women academics including those with under-examined identities such as lesbian, feminist, married or unmarried, and contingent faculty. And, it offers new perspectives on persistent issues such as family policies, pay and promotion inequalities, and disproportionate service burdens. The editors provide case studies of women who have encountered antagonistic workplaces, and offer action steps, best practices, and more than 100 online resources for individuals navigating similar situations. Beyond women in academe, this book is for their allies and for administrators interested in changing the climates, cultures, and policies that allow gender inequality to exist on their campuses, and to researchers/scholars investigating these phenomena. It aims to disrupt complacency amongst those who claim that things are "better" or "good enough" and to provide readers with strategies and resources to counter barriers created by culture, climate, or institutional structures.

Networks, Crowds, and Markets

Reasoning About a Highly Connected World

Cambridge University Press Are all film stars linked to Kevin Bacon? Why do the stock markets rise and fall sharply on the strength of a vague rumour? How does gossip spread so quickly? Are we all related through six degrees of separation? There is a growing awareness of the complex networks that pervade modern society. We see them in the rapid growth of the Internet, the ease of global communication, the swift spread of news and information, and in the way epidemics and financial crises develop with startling speed and intensity. This introductory book on the new science of networks takes an interdisciplinary approach, using economics, sociology, computing, information science and applied mathematics to address fundamental questions about the links that connect us, and the ways that our decisions can have consequences for others.

An Illustrated Book of Bad Arguments

The Experiment "A flawless compendium of flaws." —Alice Roberts, PhD, anatomist, writer, and presenter of The Incredible Human Journey The antidote to fuzzy thinking, with furry animals! Have you read (or stumbled into) one too many irrational online debates? Ali Almosawi certainly had, so he wrote An Illustrated Book of Bad Arguments! This handy guide is here to bring the internet age a much-needed dose of old-school logic (really old-school, a la Aristotle). Here are cogent explanations of the straw man fallacy, the slippery slope argument, the ad hominem attack, and other common attempts at reasoning that actually fall short—plus a beautifully drawn menagerie of animals who (adorably) commit every logical faux pas. Rabbit thinks a strange light in the sky must be a UFO because no one can prove otherwise (the appeal to ignorance). And Lion doesn't believe that gas emissions harm the planet because, if that were true, he wouldn't like the result (the argument from consequences). Once you learn to recognize these abuses of reason, they start to crop up everywhere from congressional debate to YouTube comments—which makes this geek-chic book a must for anyone in the habit of holding opinions.

Facilitating Intergroup Dialogues

Bridging Differences, Catalyzing Change

Stylus Publishing, LLC. Intergroup dialogue has emerged as an effective educational and community building method to bring together members of diverse social and cultural groups to engage in learning together so that they may work collectively and individually to promote greater diversity, equality and justice. Intergroup dialogues bring together individuals from different identity groups (such as people of color and white people; women and men; lesbian, gay, and bisexual people and heterosexual people), and uses explicit pedagogy that involves three important features: content learning, structured interaction, and facilitative guidance. The least understood role in the pedagogy is that of facilitation. This volume, the first dedicated entirely to intergroup dialogue facilitation, draws on the experiences of contributors and on emerging research to address the multi-dimensional role of facilitators and co-facilitators, the training and support of facilitators, and ways of improving practice in both educational and community settings. It constitutes a comprehensive guide for practitioners, covering the theoretical, conceptual, and practical knowledge they need. Presenting the work and insights of scholars, practitioners and scholar-practitioners who train facilitators for intergroup dialogues, this book bridges the theoretical and conceptual foundations of intergroup relations and social justice education with training models for intergroup dialogue facilitation. It is intended for staff, faculty, and administrators in higher education, and community agencies, as well as for human resources departments in workplaces.
