official policies. This study also briefly discusses the foreign economic policy implications of China's FDI absorption and suggests some future research possibilities. **Financial Management, 5th Edition** [S. Chand Publishing](#)

International Financial Management [Taylor & Francis](#) **Currency Hedging for International Portfolios** [International Monetary Fund](#) **This paper examines the benefits from hedging the currency exposure of international investments in single- and multi-country equity and bond portfolios from the perspectives of German, Japanese, British and American investors. Some of the biggest changes in this edition were prompted by the tax changes enacted in the U.S. Tax Cuts and Jobs Act passed in December 2017. **Financial Management Principles and Applications** [Pearson](#) **For undergraduate courses in corporate finance and financial management. Economic Analysis and Law The Economics of the Courtroom [Routledge](#) A comprehensive presentation of the use of economics in judicial decisions, the book is structured to provide all the foundational concepts that are important for the application of economics to the development and interpretation of statutes that emanate from economic conditions. The diversity of the economic field defines the scope of the book and its relevance to the study of law and rule adjudication. Beyond the positive dimensions of law and economics, the book evaluates the normative aspects of law and economics when laws are imprecise, and markets are inefficient. The ethical scope of transactions and rule adjudication are further considered in the context of professional ethics and the rationale for ethical considerations in the practice of law and economics. It presents a unique analysis of law, finance, and economics, by taking a look at the intricate quantitative requirements that are essential for scientific knowledge in the courtroom and the international dimensions of the practice of law and economics beyond municipal frontiers. It alerts entrepreneurs to risk exposures in the global economy and provides foundational information for readers who are also interested in international law and economics, and the essence and interpretations of international conventions appertaining to money, expropriation, the environment, and investments in international financial markets. This book is a useful reference for both undergraduate and graduate students who are interested in law and economics, forensic economics, corporate white-collar crime, and legal studies. It is also valuable for certificate programs for paralegals who wish to have a basic understanding of economic and financial concepts. The Evolution of the International Monetary System Historical Reappraisal and Future Perspectives [Informing Science](#) The aim of this book is to synthesize the role of information throughout the history of civilization's development. This will be defined through the convergence of (a) the cumulative evolution and revolution of the intellect (cognition as data, information, concepts, knowledge, and wisdom), (b) labor, and (c) politics which seek to control the environment, society, and the world, applying culture and infrastructure as tools. Whereas researchers reveal the myriad of dimensions of the social order and its historiography, this book provides a synthesis of the relations, which is limited to information (and its informing systems) and civilization within the context of *historiosophie* (history with judgment). The method presented in this

book—the architectural approach to the dynamics of civilizational development—is a new layer over the quantitative history based on statistical data. In an architectural synthesis of civilization, we seek a “big picture” of “civilization waves” in order to develop some criteria-oriented views of the world and its future predictability. To understand the crises and conflicts of civilization which are driven by technology in recent centuries, such a synthesis as well as optimism for human proactive adaptation, survival, and, development must be undertaken. This approach to civilizational development should allow humans to eventually “reinvent the future” in a continuous manner. We, in due course, should be able to predict the “rate of change” and provide “civilization bridging solutions” based on original thinking. It is important to remind ourselves that information is as old as our world (about 15 billion years) because plants and trees and, in general, non-human nature produces all sorts of information, for example, the changing colors of plants and trees, which is associated with the different seasons. When the first living organisms appeared on our planet, they had ability to inform as well by changing forms, colors, signals and, so on. The first signs of life on our planet came into being about 3.85 billion years ago. Therefore, organism-based life on the Earth actually came to be over a period of just 130 million years. Hominids diverged from apes some 10-6 million years ago (instinct-driven info-communication, i.e., behavior less controlled by cognition), and the first humans (bipeds with large brains who could use tools and sound-driven info-communication) took form around 6-2.5 million years ago in Southeast Africa. Homo symbolicus, who could skillfully use language, appeared about 60,000 years ago. The origin of civilization some 6,000 years ago marks the beginning of the first advanced info-communication systems applied by humans, who could even record information.
