"Optimizing Corporate Portfolio Management: Aligning Investment Proposals with Organizational Strategy" goes beyond platitudes about why you should use corporate portfolio management (CPM) by offering a practical methodology to bring this powerful discipline to your organization. "Optimizing Corporate Portfolio Management" takes an expansive view of where CPM can be utilized by demonstrating that it can be used across any business line, product group or functional area, e.g., IT, R&D, innovation, marketing, salesforce, capital expenditure, etc. CPM is appropriate anywhere discretionary investments are being selected and executed. As a result, other terms used to describe portfolio management such as IT portfolio management, enterprise portfolio management, and project portfolio management are all merely subsets or slices of CPM. The book is written by Anand Sanwal, an expert on CPM, who has led American Express' CPM discipline (referred to as American Express Investment Optimization). American Express' CPM efforts are widely recognized as the most extensive, substantial and progressive deployment of CPM across any organization. Sanwal avoids academic theories and consultant jargon to ultimately deliver pragmatic and proven recommendations on how to make CPM a reality. The book features a foreword by Gary Crittenden, former CFO and EVP of American Express, and several case studies from leading financial services, technology, and government organizations utilizing CPM. Additionally, the book has received significant praise from thought leaders at Google, HP, American Express, The CFO Executive Board, Gartner, Accenture Marketing Sciences, The Wharton School of Business and many others. **Investment Leadership and Portfolio Management The Path to Successful Stewardship for Investment Firms** [John Wiley & Sons](#) An industry leader candidly examines the role of investment leadership in portfolio management **Investment Leadership & Portfolio Management** provides a top down analysis of successful strategies, structures, and actions that create an environment that leads to strong macro investment performance and rewarding investor outcomes. Undiversified The Big Gender Short in Investment Management [Columbia University Press](#) Diversification is a core principle of investing. Yet money managers have not applied it to their own ranks. Only around 10 percent of portfolio managers—the people most directly responsible for investing your money—are female, and the numbers are even worse at the ownership level.

What are the causes of this underrepresentation, and what are its consequences—including for firms' and clients' bottom lines? In *Undiversified*, experienced practitioners Ellen Carr and Katrina Dudley examine the lack of women in investment management and propose solutions to improve the imbalance. They explore the barriers that subtly but effectively discourage women from entering and staying in the industry at each point in the pipeline. At the entry level, the lack of visible role models discourages students from considering the field, and those who do embark on an investment management career face many obstacles to retention and promotion. Carr and Dudley highlight the importance of informal knowledge about how to navigate career tracks, without which women are left at a disadvantage in an industry that lionizes confidence. They showcase a diverse constellation of successful female portfolio managers to demystify the profession. Drawing on wide-ranging research, interviews with prospective, current, and former industry practitioners, and the authors' own experiences, *Undiversified* makes a compelling case that increasing the number of women could help transform active investment management at a time when it is under threat from passive strategies and technological innovation.

What may have seemed like one among many success stories in the era before the Internet bubble burst emerges now as a completely unprecedented institutional investment achievement. In this fully revised and updated edition, Swensen, author of the bestselling personal finance guide *Unconventional Success*, describes the investment process that underpins Yale's endowment. This book is divided into four parts that follow the four stages of the multi-asset investment management process: 1. Establishing objectives: Defining the return objectives, risk objectives and investment constraints of a portfolio. 2. Setting an investment strategy: Setting a plan to achieve investment objectives by thinking about long-term strategic asset allocation, combining asset classes and optimisation to derive the most efficient asset allocation. 3. Implementing a solution: Turning the investment strategy into a portfolio using short-term tactical asset allocation, investment selection and risk management. This section includes examples of investment strategies. 4. Reviewing: Evaluating the performance of a portfolio by examining results, risk, portfolio positioning and the economic environment. By dividing the multi-asset investment process into these well-defined stages, Yoram Lustig guides the reader through the various decisions that have to be made and actions that have to be taken. He builds carefully from defining investment objectives, formulating an investment strategy and the steps of selecting investments, leading to constructing and managing multi-asset portfolios. At each stage the considerations and strategies to be undertaken are detailed, and the description of the process is supported with relevant financial theory as well as practical, real-life examples. An investment strategy that lacks a theoretical justification is likely to be false. Hence, an asset manager should concentrate her efforts on developing a theory rather than on backtesting potential trading rules. The purpose of this Element is to introduce machine learning (ML) tools that can help asset managers discover economic and financial theories. ML is not a black box, and it does not necessarily overfit. ML tools complement rather than replace the classical statistical methods. Some of ML's strengths include (1) a focus on out-of-sample predictability over variance adjudication; (2) the use of computational methods to avoid relying on (potentially unrealistic) assumptions; (3) the ability to "learn" complex specifications, including nonlinear, hierarchical, and noncontinuous interaction effects in a high-dimensional space; and (4) the ability to disentangle the variable search from the specification search, robust to multicollinearity and other substitution effects.
