Pricing in Competitive Electricity Markets

Springer Science & Business Media **Electricity markets are being deregulated or face new regulatory frameworks. In such changing markets, new pricing strategies will need to consider such factors as cost, value of service and pricing by objective. Pricing in Competitive Electricity Markets introduces a new family of pricing concepts, methodologies, models, tools and databases focused on market-based pricing. This book reviews important theoretical pricing issues as well as practical pricing applications for changing electricity markets.**

EU Competition Law Volume II: Mergers and Acquisitions

Edward Elgar Publishing **This book is a Claeyns and Casteels title, now formally part of Edward Elgar Publishing. With extensive updating in the decade since the publication of the second edition, and written by the key Commission and European Court officials in this area, as well as leading practitioners, the third edition of this unique title provides meticulous and exhaustive coverage of EU Merger Law.**

European Competition

Routledge **Europe is increasingly becoming an everyday reality for many companies, not only for large corporations but small and medium-sized enterprises as well. European Competition offers students an introduction to the field of competition, cooperation and competition policy in the EU. To increase students' understanding of the workings of the Internal Market, most chapters start with case-studies. The book focuses on the subject areas economics and law and is written from both a business and a social/legal perspective. European Competition is an essential introductory textbook for students at both undergraduate and graduate levels in a wide range of degree and professional programmes. Including Economics, MBA and Law. It is of particular relevance to students interested in the European context of these disciplines and can be used as a core textbook for courses in European Integration or Business and International Environment in Europe and other parts of the world. This text is complementary to the book European Business Environment.**

Energy Policy Act of 1992

Hearing Before the Committee on Energy and Natural Resources, United States Senate, One Hundred Fifth Congress, First Session on the Federal Agency Energy Management Provisions of the Energy Policy Act of 1992, September 25, 1997

Toward Competition in Cable Television

American Enterprise Institute This book identifies the major sources of competition to the cable television industry, such as telephone companies, direct broadcast satellite services, and traditional broadcasting stations.

Modern Product Costing Technique in the Age of Competition

eBookIt.com This book addresses an important issue -- the nature of and evidence for success in the transfer costing of internal services or shared services or products within a company. The case of activity-based costing (ABC) is used to explore how the proponents have developed a framework linking Quality, Cost and Delivery (QCD) components of products and services. The QCD performance indices, which are the natural properties of products and services, will form part of the Service Level Agreements between the internal service providers (Shared Services Centers) and internal customers (Profit Centers) of the company. This framework optimizes the use of overhead expenses to the end products of the company. This book also discusses the various cost components of the products and services using the full absorption costing principle. It is a revolutionary idea in the sense that all activity costs are considered variable costs and product costs come from activity costs using various cost drivers. The Principal Component Analysis (PCA), the multi-variate statistical tool, is applied using SPSS to analyze which independent variables contribute significantly to the Product Unit Price (PUP) and which should be given more emphasis in decision making process.

Innovations in Sustainability

Cambridge University Press This insightful book employs high-profile company cases to focus on two major challenges for sustainable innovation: fuel and food.

Power, Competition and the State

Volume 3

Springer 'The best contemporary map available [of the British state].' Peter Hennessy The final volume of Keith Middlemas's acclaimed trilogy shows how, after a climactic crisis in the mid-1970s, the balance changed between government, interest groups, political parties, and public, whose competition had characterised the postwar years, and how emergence of new alignments among them altered the British state itself. Documented from over three hundred interviews with participants, as well as archives, it provides an object lesson in contemporary history.

Competition in the FEHB program

hearing before the Subcommittee on Health of the Committee on Ways and Means, U.S. House of Representatives, One Hundred Ninth Congress, first session, December 2, 2005

Trademark and Unfair Competition Conflicts

Historical-Comparative, Doctrinal, and Economic Perspectives

Cambridge University Press With the rise of internet marketing and e-commerce around the world, international and cross-border conflicts in trademark and unfair competition law have become increasingly important. In this groundbreaking work, Tim Dornis - who, in addition to his scholarly pursuits, has worked as an attorney, a public prosecutor, and a judge, giving him experience in both civil and common-law jurisdictions - presents the historical-comparative, doctrinal, and economic aspects of trademark and unfair competition conflicts law. The book should be read by any scholar or practitioner interested in the international aspects of intellectual property generally, and trademark and unfair competition law specifically. This title is available as Open Access.

An Introductory Guide to EC Competition Law and Practice

The Political Economy of European Union Competition Policy

A Case Study of the Telecommunications Industry

Routledge In the European Union (EU), competition policy occupies a central place amongst other EU public policies and is the first truly supranational public policy regulating market competition. One of the stated objectives of EU competition policy is to prevent excessive concentration of economic power in the hands of a few. This book investigates the political economy of EU competition policy by taking the European telecommunications industry as a case study. Baskoy argues that the EU competition policy has failed to achieve its objectives of preventing excessive market concentration in the telecommunications industry over the past quarter-century. He takes the controversial view that EU competition policy foremost promotes an industrial policy that fosters the profitability of European firms. Moreover, Baskoy argues that EU competition policy is short of adequate theoretical and conceptual capacities to comprehend the working dynamics of market competition and the market behavior of firms. This exceptional book will be of interest to scholars of Politics, Economics, Business, and International Relations and Policies.

Competition in the Evolving Digital Marketplace

Hearing Before the Subcommittee on Courts and Competition Policy of the Committee on the Judiciary, House of Representatives, One Hundred Eleventh Congress, Second Session, September 16, 2010

Decisions of the Public Utilities Commission of the State of California Power Systems Restructuring Engineering and Economics

Springer Science & Business Media The writing of this book was largely motivated by the ongoing unprecedented world-wide restructuring of the power industry. This move away from the traditional monopolies and toward greater competition, in the form of increased numbers of independent power producers and an unbundling of the main services that were until now provided by the utilities, has been building up for over a decade. This change was driven by the large disparities in electricity tariffs across regions, by technological developments that make it possible for small producers to compete with large ones, and by a widely held belief that competition will be beneficial in a broad sense. All of this together with the political will to push through the necessary legislative reforms has created a climate conducive to restructuring in the electric power industry. Consequently, since the beginning of this decade dramatic changes have taken place in an ever-increasing list of nations, from the pioneering moves in the United Kingdom, Chile and Scandinavia, to today's highly fluid power industry throughout North and South America, as well as in the European Community. The drive to restructure and take advantage of the potential economic benefits has, in our view, forced the industry to take actions and make choices at a hurried pace, without the usual deliberation and thorough analysis of possible implications. We must admit that to speak of "the industry" at this juncture is perhaps disingenuous, even misleading.

Lithium-Ion Batteries

Advances and Applications

Newnes Lithium-Ion Batteries features an in-depth description of different lithium-ion applications, including important features such as safety and reliability. This title acquaints readers with the numerous and often consumer-oriented applications of this widespread battery type. Lithium-Ion Batteries also explores the concepts of nanostructured materials, as well as the importance of battery management systems. This handbook is an invaluable resource for electrochemical engineers and battery and fuel cell experts everywhere, from research institutions and universities to a worldwide array of professional industries. Contains all applications of consumer and industrial lithium-ion batteries, including reviews, in a single volume Features contributions from the world's leading industry and research experts Presents executive summaries of specific case studies Covers information on basic research and application approaches

Into the Value Zone

Gaining and Sustaining Competitive Advantage

University Press of America Into the Value Zone provides business leaders with an uncomplicated approach to evaluate their own company and the competition. Professor Ron Wood explains strategies that will help managers to create and execute initiatives that achieve sustainable results with enduring value for their clients and to manage their company's assets with efficiency. Professor Wood outlines a concise business model for managers that highlights market trends, uncovers the impact of new technologies, and enables them to see their company's placement against the competition in The Big Picture. Book jacket.

Who Decides Who Decides?

Enabling Choice, Equity, Access, Improved Performance and Patient Guaranteed Care

CRC Press This book makes the case for 'ordinary' people to get the health and social care which the state has promised them for over 60 years but which has not been delivered. What is the case for choice? How can choice be made real for the individual? What impact can genuine, individually financially-empowered choice have on effective funding, purchasing, delivery, and outcomes? How can a genuine market grow and thrive? How can the quest for choice include the large numbers of NHS and social care staff on whom success depends? The book urges individual financial empowerment, through a life-long health savings account for all NHS and social services.

Competition and the Regulation of Utilities

Springer Science & Business Media companies to diversify may outweigh the costs of doing so, and that some traditional regulatory concerns may be excessively restrictive. The papers by Hillman, Harris, and Jang and Norsworthy, while all relating to individual industries, have lessons for other regulated industries. Hillman's paper, "Oil Pipeline Rates: A Case for Yardstick Regulation," deals with the important topic of yardstick regulation for oil pipelines. While his application is highly specific, the potential application of yardstick regulation goes beyond oil pipelines. He reviews the evolution in the law regulating oil pipelines. While showing that some progress has been made in introducing economic efficiency considerations into regulation, he provides a careful critique of the operation of existing regulation and suggests an alternative based upon a yardstick approach. His approach seeks to use competitive market prices as the yardstick, with administration of price discrimination limited to dealing with possible "favoritism" to subsidiaries and affiliates. "Telecommunications Services as a Strategic Industry: Implications for United States Public Policy" by Harris and "Productivity Growth and Technical Change in the United States Telecommunications Equipment Manufacturing Industries" by Jang and Norsworthy provide important insights for telecommunications.

Competition Policy for the New Era

Insights from the BRICS Countries

Oxford University Press Competition law has expanded to more than 100 jurisdictions worldwide with varying degrees of economic, social, and institutional development, raising important questions as to what is the appropriate design of competition law regimes and the interaction between competition law and economic development. This volume, comprising a selection of papers from the 4th BRICS International Competition Conference written by academic and practising economists and lawyers from both developed and developing countries, is distinctive in its focus on a broader view of competition policy in BRICS and developing countries. It examines the role competition, the application of broader public interest and national interest concerns in the analysis and influence on developing country competition authorities' policy-making. The contributors address topics such as: - a broad view of competition policy; - making markets work for the people as a post millennium development goal; - some key issues concerning the further development of China's antimonopoly law; - remedies in BRICS countries; - public interest issues in cross-border mergers; - crafting creative remedies in food markets in South Africa; - what are African competition authorities doing to fight cartels?; - successes and challenges in the fight against cartels; and the economics of antitrust sanctioning.

Competition and Cooperation

Conversations with Nobelists about Economics and Political Science

Russell Sage Foundation What can the disciplines of political science and economics learn from one another? Political scientists have recently begun to adapt economic theories of exchange, trade, and competition to the study of legislatures, parties, and voting. At the same time, some of the most innovative and influential thinkers in economics have crossed the boundaries of their discipline to explore the classic questions of political science. Competition and Cooperation features six of these path-breaking scholars, all winners of the Nobel Prize for Economics, in a series of conversations with more than a dozen distinguished political scientists. The discussions analyze, adapt, and extend the Nobelists' seminal work, showing how it has carried over into political science and paved the way for fruitful cooperation between the two disciplines. The exchanges span all of the major conceptual legacies of the Nobel laureates: Arrow's formalization of the problems of collective decisions; Buchanan's work on constitutions and his critique of majority rule; Becker's theory of competition among interest groups; North's focus on insecure property rights and transaction costs; Simon's concern with the limits to rationality; and Selten's experimental work on strategic thinking and behavior. As befits any genuine dialogue, the traffic of ideas and experiences runs both ways. The Nobel economists have had a profound impact upon political science, but, in addressing political questions, they have also had to rethink many settled assumptions of economics. The standard image of economic man as a hyper-rational, self-interested creature, acting by and for himself, bears only a passing resemblance to man as a political animal. Several of the Nobelists featured in this volume have turned instead to the insights of cognitive science and institutional analysis to provide a more recognizable portrait of political life. The reconsideration of rationality and the role of institutions, in economics as in politics, raises the possibility of a shared approach to individual choice and institutional behavior that gives glimmers of a new unity in the social sciences. Competition and Cooperation demonstrates that the most important work in both economics and political science reflects a marriage of the two disciplines.

Energy and Water Development Appropriations for 2011: Dept. of Energy: Nuclear energy; Secretary of Energy
