UNHOLY TRINITY

Marshall Cavendish International Asia Pte Ltd New in this edition: REPENTANCE ON DEATH ROW. AN EXCLUSIVE INTERVIEW WITH SISTER GERARD, THE NUN WHO COUNSELLED THE TWO WOMEN ACCOMPLICES Singapore's most bizarre murder case drew to a close on 25 November 1988 when Adrian Lim, his wife Catherine Tan Mui Choo and mistress Hoe Kah Hong were hanged at Changi Prison. After two children were found dead within a fortnight in 1981, the Toa Payoh 'ritual killings' proved shocking for the revelations about self-styled spirit medium Adrian Lim's greed, depravity and cruelty. The confidence trickster persuaded numerous women that he possessed supernatural powers and they paid him with money, valuables and sex. He tortured his victims with primitive electric shock treatments that left one man dead. He was a monster who beat, slapped and kicked his women to make them fear and obey him as he acted out his every lustful perversion. He turned his wife into a prostitute and stripper. He made his mistress lure the children to their deaths. Sentencing all three to hang, the trial judges said of Adrian Lim: "We are revulsed by his abominable and depraved conduct."

THE SEA

A PHILOSOPHICAL ENCOUNTER

Bloomsbury Publishing Humankind has a profound and complex relationship with the sea, a relationship that is extensively reflected in biology, psychology, religion, literature and poetry. The sea cradles and soothes us, we visit it often for solace and inspiration, it is familiar, being the place where life ultimately began. Yet the sea is also dark and mysterious and often spells catastrophe and death. The sea is a set of contradictions: kind, cruel, indifferent. She is a blind will that will 'have her way'. In exploring this most capricious of phenomena, David Farrell Krell engages the work of an array of thinkers and writers including, but not limited to, Homer, Thales, Anaximander, Heraclitus, Plato, Aristotle, Hölderlin, Melville, Woolf, Whitman, Nietzsche, Heidegger, Schelling, Ferenczi, Rank and Freud. The Sea explores the significance in Western civilization of the catastrophic and generative power of the sea and what humankind's complex relationship with it reveals about the human condition, human consciousness, temporality, striving, anxiety, happiness and mortality.

THE ANSWER

BOOK I

Balboa Press The Answer, a compelling tale, unfolds as eight friends discover they all have recently encountered an unusual elderly gentleman. Mysteriously and inexplicably, this kindly stranger appears to them in different settings around the world. On each occasion, he delivers the same message, urging each of them to come to the aid of a place he simply calls the Island. While sharing their odd encounters, the friends become confident in the reality of their experiences and in the important truth of their visitors messages. As they deliberate making commitments to a yet-to-be-revealed vital mission, the amiable gentleman joins their conversations, facilitating greater camaraderie while also expanding the friends consciousness of dimensions beyond their own. His mere presence is evidence that more exists than previously known. Like other books presented by Claudia, The Answer features characters whose gentleness, goodness, and mutual respect embody an enviable way of being.

UNSETTLED

WHAT CLIMATE SCIENCE TELLS US, WHAT IT DOESN'T, AND WHY IT MATTERS

BenBella Books "Unsettled is a remarkable book—probably the best book on climate change for the intelligent layperson—that achieves the feat of conveying complex information clearly and in depth." —Claremont Review of Books "Surging sea levels are inundating the coasts." "Hurricanes and tornadoes are becoming fiercer and more frequent." "Climate change will be an economic disaster." You've heard all this presented as fact. But according to science, all of these statements are profoundly misleading. When it comes to climate change, the media, politicians, and other prominent voices have declared that "the science is settled." In reality, the long game of telephone from research to reports to the popular media is corrupted by misunderstanding and misinformation. Core questions—about the way the climate is responding to our influence, and what the impacts will be—remain largely unanswered. The climate is changing, but the why and how aren't as clear as you've probably been led to believe. Now, one of America's most distinguished scientists is clearing away the fog to explain what science really says (and doesn't say) about our changing climate. In Unsettled: What Climate Science Tells Us, What It Doesn't, and Why It Matters, Steven Koonin draws upon his decades of experience—including as a top science advisor to the Obama administration—to provide up-to-date insights and expert perspective free from political agendas. Fascinating, clear-headed, and full of surprises, this book gives readers the tools to both understand the climate issue and be savvier consumers of science media in general. Koonin takes readers behind the headlines to the more nuanced science itself, showing us where it comes from and guiding us through the implications of the evidence. He dispels popular myths and unveils little-known truths: despite a dramatic rise in greenhouse gas emissions, global temperatures actually decreased from 1940 to 1970. What's more, the models we use to predict the future aren't able to accurately describe the climate of the past, suggesting they are deeply flawed. Koonin also tackles society's response to a changing climate, using data-driven analysis to explain why many proposed "solutions" would be ineffective, and discussing how alternatives like adaptation and, if necessary, geoengineering will ensure humanity continues to prosper. Unsettled is a reality check buoyed by hope, offering the truth about climate science that you aren't getting elsewhere—what we know, what we don't, and what it all means for our future.

MATH FROM THREE TO SEVEN**THE STORY OF A MATHEMATICAL CIRCLE FOR PRESCHOOLERS**

American Mathematical Soc. This book is a captivating account of a professional mathematician's experiences conducting a math circle for preschoolers in his apartment in Moscow in the 1980s. As anyone who has taught or raised young children knows, mathematical education for little kids is a real mystery. What are they capable of? What should they learn first? How hard should they work? Should they even "work" at all? Should we push them, or just let them be? There are no correct answers to these questions, and the author deals with them in classic math-circle style: he doesn't ask and then answer a question, but shows us a problem--be it mathematical or pedagogical--and describes to us what happened. His book is a narrative about what he did, what he tried, what worked, what failed, but most important, what the kids experienced. This book does not purport to show you how to create precocious high achievers. It is just one person's story about things he tried with a half-dozen young children. Mathematicians, psychologists, educators, parents, and everybody interested in the intellectual development in young children will find this book to be an invaluable, inspiring resource. In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life, MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people, their parents and teachers, and the mathematics profession. Titles in this series are co-published with the Mathematical Sciences Research Institute (MSRI).
