Engineering Equality An Essay on European Anti-Discrimination Law [OUP Oxford](#) **In an age of widespread cutbacks on social spending, the prospects of social policy generally appear to be grim. If noticeable progress has been recently made in the European Union, then it is in regard to rooting out discrimination. Indeed, anti-discrimination law and policy appears to be the one sphere of social policy whose success is causally connected to the European Union. But how successful can anti-discrimination law be? This book uses legal analysis in order to expose the intrinsic shortcomings of common approaches. Anti-discrimination law fails to provide adequate legal guidance and therefore invites constant supplementation by pedagogical projects of social engineering. This book offers a genuinely leftist critique on anti-discrimination law, and concludes with a discussion of alternative models of solidarity in the Union. Works National Environmental Laboratories, Hearings Before the Subcommittee on Air and Water Pollution ... Professional Engineer Parliamentary Papers Residential Construction Law [Bloomsbury Publishing](#)

This is the first book to offer a systematic and analytical overview of the legal framework for residential construction. In doing so, the book addresses two fundamental questions: Prevention: What assurances can the law give buyers (and later owners and occupiers) of homes that construction work - from building of a complete home to adding an extension or replacing a shower unit - will comply with minimum standards of design, safety and build quality? Cure: What forms of redress - from whom, and by what route - can residents expect, when, often long after completion of construction, they discover defects? The resulting problems pose some big and difficult questions of principle and policy about standards, rights and remedies, which in turn concern justice more generally. This book addresses these key issues in a comparative context across the United Kingdom, Ireland, Australia and New Zealand. It is an accessible guide to the existing law for residents and construction professionals (and their legal advisers), but also charts a course to further, meaningful reforms of the legal landscape for residential construction around the world. The book's two co-authors, Philip Britton and Matthew Bell, have taught in the field in the UK, Australia and New Zealand; both have been active in legal practice, as have the book's two specialist contributors, Deirdre Ní Fhloinn and Kim Vernau.
