Every field of history has a basic need for a detailed chronology of what happened: who did what when. In the absence of such a resource, fanciful accounts flourish. This book provides a rich narrative of the early development of online information retrieval systems and services, from 1963 to 1976—a period important to anyone who uses a search engine, online catalog, or large database. Drawing on personal experience, extensive research, and interviews with many of the key participants, the book describes the individuals, projects, and institutions of the period. It also corrects many common errors and misconceptions and provides milestones for many of the significant developments in online systems and technology. **Official Gazette of the United States Patent and Trademark Office Trademarks National Electrical Code** Cengage Learning Safe, efficient, code-compliant electrical installations are made simple with the latest publication of this widely popular resource. Although several countries experienced devastating setbacks, most of them recovered to achieve reasonable rates of economic growth over the next few years. Sound macroeconomic management, export-oriented policies, and the availability of skilled and low-wage labour are among the factors that contributed to the rapid economic growth before the crisis and the recovery thereafter. Especially noteworthy in this regard is the role played by foreign direct investment (FDI). This comprehensive book identifies the factors that contributed to the expansion of FDI inflows in East Asia and the factors that enabled recipient countries to utilize FDI effectively. It includes detailed case studies on China, South Korea, Taiwan, Indonesia, Malaysia, the Philippines, Singapore, Thailand and Vietnam. Also included is a comparative study of investing firms headquartered in the United States, Japan and Hong Kong. The authors conclude that social stability, clear and effective policy implementation and corporate governance are all key factors in reaping economic success from FDI. **PC Mag** PCMag.com is a leading authority on technology, delivering Labs-based, independent reviews of the latest products and services. It asks how the Korean electronics industry was able to develop, both in terms of production and technology, despite low inflows of licensing and foreign direct investments. The books argues that the key to its spectacular growth has been through its participation and learning from an inter-firm arrangement called original equipment manufacturing arrangement (OEM). A number of firm-level case studies on the Korean electronics industry support this argument. The role of the government,

especially related to its technology policy, has also been analysed. The government was effective in providing financial incentives for the firms' technological upgrading efforts, but its supplying of direct technological assistance had limited success. Overall, this book argues that contrary to many previous studies, the role of multinational enterprises has been significant in the development of Korea's electronics industry, and that they have acted as a 'technological tutor' for Korea through OEM"--P. xiv.tributors, world_0.

ICANN '93 Proceedings of the International Conference on Artificial Neural Networks Amsterdam, The Netherlands 13-16 September 1993 Springer Science & Business Media This book contains the proceedings of the International Conference on Artificial Neural Networks which was held between September 13 and 16 in Amsterdam. It is the third in a series which started two years ago in Helsinki and which last year took place in Brighton. Thanks to the European Neural Network Society, ICANN has emerged as the leading conference on neural networks in Europe. Neural networks is a field of research which has enjoyed a rapid expansion and great popularity in both the academic and industrial research communities. The field is motivated by the commonly held belief that applications in the fields of artificial intelligence and robotics will benefit from a good understanding of the neural information processing properties that underlie human intelligence. Essential aspects of neural information processing are highly parallel execution of computation, integration of memory and process, and robustness against fluctuations. It is believed that intelligent skills, such as perception, motion and cognition, can be easier realized in neuro-computers than in a conventional computing paradigm. This requires active research in neurobiology to extract computational principles from experimental neurobiological findings, in physics and mathematics to study the relation between architecture and function in neural networks, and in cognitive science to study higher brain functions, such as language and reasoning. Neural networks technology has already led to practical methods that solve real problems in a wide area of industrial applications. The clusters on robotics and applications contain sessions on various sub-topics in these fields. **PC Mag** PCMag.com is a leading authority on technology, delivering Labs-based, independent reviews of the latest products and services.
