## **INTRODUCTION TO HUMAN DEVELOPMENT AND FAMILY STUDIES**

---

Psychology Press Introduction to Human Development and Family Studies is the first text to introduce human development and family studies (HDFS) as inextricably linked areas of study, giving students a complex yet realistic view of individuals and families. Pioneers of research paradigms have acknowledged that the family is one setting in which human development occurs. Moreover, in many academic programs, the lines of these two disciplines blur and much work is inherently multidisciplinary and interdisciplinary. This book helps to fortify an understanding of HDFS and subareas within it. Vignettes from current HDFS students as well as new professionals, an overview of the lifespan stage(s) within the family context, a wide description of research methods and applications, current policy issues relevant to the area, and discussions of practice/careers coupled with strategies for pursuing specializations or careers in the area are hallmarks of this textbook. Introduction to Human Development and Family Studies is essential reading for students new to the major and minor wanting to know: What is HDFS? Who are the people involved in HDFS? Why is HDFS important? How does theory and research inform work in HDFS? What does the pursuit of being an ethical professional require? What are the key areas in HDFS? Incredibly user-friendly both on the page and online, the text also features the following resources: Chapter Summaries where the main points of each chapter are pinpointed at the end of every chapter for review and study. Key Terms listed and defined within the margins of every chapter, a complete Glossary at the end of the text, and Flashcards online for additional review and study. Challenge: Integration section at the end of each chapter that underscores concepts from the chapter and draws connections between content presented in other chapters. Journal Questions to encourage reflection about the content and encourage thinking about some of the content coupled with students' own experiences. Suggested Resources that lists relevant websites, books, articles, and video links for further study. A Closer Look at Applied Experiences Appendix outlines the internship process and shows how the internship experience can be meaningful and useful, and a Consuming Research Appendix that focuses on what it means to be a consumer of research, the knowledge and skills consumers need, and considerations for transitioning from a consumer of research to a producer of research.

## **TYPICAL AND ATYPICAL DEVELOPMENT**

---

Routledge Child and Adolescent Psychology provides an accessible and thorough introduction to human development by integrating insights from typical and atypical development. Based on international research, and informed by biological, social and cultural perspectives, the book provides explanations of developmental phenomena, with a focus on how children and adolescents at different age levels actually think, feel and act. Following a structure by topic, with chronological developments within each chapter, von Tetzchner presents and contrasts the major theoretical ideas in developmental psychology and discusses their implications for different aspects of development. He also integrates information about sensory, physical and cognitive disabilities and the main emotional and behavioral disorders of childhood and adolescence, and the developmental consequences of these disabilities and disorders. Child and Adolescent Psychology is accompanied by online resources for lecturers and students to enhance the book, including essay questions for each chapter, Powerpoint slides and multiple-choice questions. The book and companion website will prove invaluable to developmental psychology students.

## **LIFE-SPAN DEVELOPMENT**

---

### **FRAMEWORKS, ACCOUNTS AND STRATEGIES**

---

**Routledge** This thorough revision of the highly successful first edition of Life-Span Development offers the reader a wide-ranging and thought provoking account of human development throughout the lifespan. The lifespan approach emphasises that development does not stop when we cease to be adolescents but goes on throughout adulthood and into old age. In initial chapters Leonie Sugarman outlines the issues surrounding the notion of development and how it can be studied, including reviews of the work of key theorists Erikson, Levinson and Gould. She goes on to consider the different ways in which the life course can be construed: as a series of age-related stages; as a cumulative sequence; as a series of developmental tasks; as a series of key life events and transitions or as a narrative construction which creates a sense of dynamic continuity. A final chapter looks at how people cope, the resources that are available and the theoretical and practical issues regarding interventions to assist them in the process. New to this edition is increased coverage of the topical issue of successful ageing and a new chapter on the increasingly popular narrative approach to lifespan development. This edition is also more student-friendly with exercises in self-reflection that encourage the reader to look at the development of their own lives or those of their current or future clients. Boxed material highlighting major theories and clarifying concepts is also included. This book will be invaluable for students of developmental and occupational psychology and professionals in the fields of health management, education and social work.

## **HANDBOOK OF INTEGRATIVE DEVELOPMENTAL SCIENCE**

---

### **ESSAYS IN HONOR OF KURT W. FISCHER**

---

Routledge Although integrative conceptions of development have been gaining increasing interest, there have been few attempts to bring together the various threads of this emerging trend. The Handbook of Integrative Developmental Science seeks ways to bring together classic and contemporary theory and research in developmental psychology with an eye toward building increasingly integrated theoretical and empirical frameworks. It does so in the form of a festschrift for Kurt Fischer, whose life and work have both inspired and exemplified integrative approaches to development. Building upon and inspired by the comprehensive scope of Fischer's Dynamic Skill Theory, this book examines what an integrated theory of psychological development might look like. Bringing together the work of prominent integrative thinkers, the volume begins with an examination of philosophical presuppositions of integrative approaches to development. It then shows how Dynamic Skill Theory provides an example of an integrative model of development. After examining the question of the nature of integrative developmental methodology, the volume examines the nature of developmental change processes as well as pathways and processes in the development of psychological structures both within and between psychological domains. The team of expert contributors cover a range of psychological domains, including the macro- and micro-development of thought, feeling, motivation, self, intersubjectivity, social relations, personality, and other integrative processes. It ends with a set of prescriptions for the further elaboration of integrative developmental theory, and a tribute to Kurt Fischer and his influence on developmental psychology. This book will be essential reading for graduate students and researchers of developmental psychology and human development, specifically developmental science.
