FUN AND GAMES

SECOND INTERNATIONAL CONFERENCE, EINDHOVEN, THE NETHERLANDS, OCTOBER 20-21, 2008, PROCEEDINGS

Springer The use of computing technology for entertainment purposes is not a recent phenomenon. Video game consoles, home computers and other entertainment media have been used widely for more than three decades, and people of all ages are spending an increasing amount of time and money on these technologies. More recent is the rise of a vibrant research community focusing on gaming and entertainment applications. Driven by the growth and the coming of age of the gaming industry, and by its increasing recognition in the media and the minds of the broader public, the study of computer games, game development and experiences is attracting the interest of researchers from very diverse fields: social sciences, computing, electrical engineering, design, etc. Research of this kind looks to extend the boundaries of gaming technologies. In a relentless drive for innovation, it looks to create and understand an ever increasing range of experiences, and examine how games can provide value for educational, therapeutic and other 'serious' purposes. These themes were reflected in the call for participation and eventually the papers accepted for presentation. The Fun n' Games conference was the second event of a bi-annual series of conferences. The first event of the series was held in Preston in 2006 organized by the University of Central Lancashire. Following the success of this event it was decided to run a follow up.
