MICROECONOMETRICS

METHODS AND APPLICATIONS

Cambridge University Press This book provides the most comprehensive treatment to date of microeconomics, the analysis of individual-level data on the economic behavior of individuals or firms using regression methods for cross section and panel data. The book is oriented to the practitioner. A basic understanding of the linear regression model with matrix algebra is assumed. The text can be used for a microeconomics course, typically a second-year economics PhD course; for data-oriented applied microeconomics field courses; and as a reference work for graduate students and applied researchers who wish to fill in gaps in their toolkit. Distinguishing features of the book include emphasis on nonlinear models and robust inference, simulation-based estimation, and problems of complex survey data. The book makes frequent use of numerical examples based on generated data to illustrate the key models and methods. More substantially, it systematically integrates into the text empirical illustrations based on seven large and exceptionally rich data sets.

HANDBOOK OF PHYSICAL-CHEMICAL PROPERTIES AND ENVIRONMENTAL FATE FOR ORGANIC CHEMICALS, SECOND EDITION

CRC Press Transport and transformation processes are key for determining how humans and other organisms are exposed to chemicals. These processes are largely controlled by the chemicals' physical-chemical properties. This new edition of the Handbook of Physical-Chemical Properties and Environmental Fate for Organic Chemicals is a comprehensive series in four volumes that serves as a reference source for environmentally relevant physical-chemical property data of numerous groups of chemical substances. The handbook contains physical-chemical property data from peer-reviewed journals and other valuable sources on over 1200 chemicals of environmental concern. The handbook contains new data on the temperature dependence of selected physical-chemical properties, which allows scientists and engineers to perform better chemical assessments for climatic conditions outside the 20-25-degree range for which property values are generally reported. This second edition of the Handbook of Physical-Chemical Properties and Environmental Fate for Organic Chemicals is an essential reference for university libraries, regulatory agencies, consultants, and industry professionals, particularly those concerned with chemical synthesis, emissions, fate, persistence, long-range transport, bioaccumulation, exposure, and biological effects of chemicals in the environment. This resource is also available on CD-ROM

ISSUES IN ETHICAL AND NON-ETHICAL PRACTICES

GRIN Verlag Doctoral Thesis / Dissertation from the year 2012 in the subject Pharmicology, grade: 3.47, , course: Pharmaceutical Marketing, language: English, abstract: Common People and government authorities are usually concerned about the unethical pharmaceutical marketing practices in Pakistan, therefore; the researcher examines the unethical pharmaceutical marketing practices in Pakistan, and selected Karachi City as Case study for this purpose and analyze the impact of unethical marketing practices in pharmaceutical industry. This study not only evaluates the responsible variables for the unethical pharmaceutical marketing practices but also compare who is more responsible for these unethical pharmaceutical marketing practices in Pakistan. This study also

examines, who has initiated these unethical pharmaceutical marketing practices in Pakistan and who is responsible for the continuation of these practices in Pakistan. In this study researcher focuses six variables that can be a major cause of unethical pharmaceutical marketing practices in Pakistan i.e. Pharmaceutical marketing and Sales personnel, doctors' community, retail and whole sales pharmacies, government and private hospitals personnel, government officials and patients or their attendants'. All these six variables have been taken and gathered the data through survey questionnaire, compile and analyze through Statistical tools like descriptive and inferential Statistics both and conclude the main cause of unethical pharmaceutical marketing practices in Pakistan. In the under taken study four different hypotheses were developed and tested through Z and F test and also analyze the data through descriptive Statistics, for the descriptive Statistics four different parameters were developed and presented in the form of graphs and tables. The conclusion of the study was that initially pharmaceutical industry was responsible to introduce the unethical marketing practices to their customers i.e. doctors community, and hospitals and later on unethical pharmaceutical marketing practices became the norm of the pharmaceutical industry. Now the doctors are the main cause or reason for the continuation of these unethical pharmaceutical marketing practices in Pakistan. It is further concluded in the study that foreign visits are more common tools in order to get maximum output from the doctor community and now doctors have become more demanding and they ask themselves regarding the foreign and local tours and conferences. Cash incentive and home appliances are another form of unethical practices in the pharmaceutical industry. [...]

FREE ENERGY CALCULATIONS

THEORY AND APPLICATIONS IN CHEMISTRY AND BIOLOGY

Springer Science & Business Media *Free energy constitutes the most important thermodynamic quantity to understand how chemical species recognize each other, associate or react. Examples of problems in which knowledge of the underlying free energy behaviour is required, include conformational equilibria and molecular association, partitioning between immiscible liquids, receptor-drug interaction, protein-protein and protein-DNA association, and protein stability. This volume sets out to present a coherent and comprehensive account of the concepts that underlie different approaches devised for the determination of free energies. The reader will gain the necessary insight into the theoretical and computational foundations of the subject and will be presented with relevant applications from molecular-level modelling and simulations of chemical and biological systems. Both formally accurate and approximate methods are covered using both classical and quantum mechanical descriptions. A central theme of the book is that the wide variety of free energy calculation techniques available today can be understood as different implementations of a few basic principles. The book is aimed at a broad readership of graduate students and researchers having a background in chemistry, physics, engineering and physical biology.*

FRAMEWORK FOR EQUITABLE ALLOCATION OF COVID-19 VACCINE

National Academies Press In response to the coronavirus disease 2019 (COVID-19) pandemic and the societal disruption it has brought, national governments and the international community have invested billions of dollars and immense amounts of human resources to develop a safe and effective vaccine in an unprecedented time frame. Vaccination against this novel coronavirus, severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2), offers the possibility of significantly reducing severe morbidity and mortality and transmission when deployed alongside other public health strategies and improved therapies. Health equity is intertwined with the impact of COVID-19 and there are certain populations that are at increased risk of severe illness or death from COVID-19. In the United States and worldwide, the pandemic is having a disproportionate impact on people who are already disadvantaged by virtue of their race and ethnicity, age, health status, residence, occupation, socioeconomic condition, or other contributing factors. Framework for Equitable Allocation of COVID-19 Vaccine offers an overarching framework for vaccine allocation to assist policy makers in the domestic and global health communities. Built on widely accepted foundational principles and recognizing the distinctive characteristics of COVID-19, this report's recommendations address the commitments needed to implement equitable allocation policies for COVID-19 vaccine.

COMPARATIVE PERSPECTIVES ON WORK-LIFE BALANCE AND GENDER EQUALITY

FATHERS ON LEAVE ALONE

Springer This book is open access under a CC BY-NC 2.5 license. This book portrays men's experiences of home alone leave and how it affects their lives and family gender roles in different policy contexts and explores how this unique parental leave design is implemented in these contrasting policy regimes. The book brings together three major theoretical strands: social policy, in particular the literature on comparative leave policy developments; family and gender studies, in particular the analysis of gendered divisions of work and care and recent shifts in parenting and work-family balance; critical studies of men and masculinities, with a specific focus on fathers and fathering in contemporary western societies and life-courses. Drawing on empirical data from in-depth interviews with fathers across eleven countries, the book shows that the experiences and social processes associated with fathers' home alone leave involve a diversity of trends, revealing both innovations and absence of change, including pluralization as well as the constraining influence of policy, gender, and social context. As a theoretical and empirical book it raises important issues on modernization of the life course and the family in contemporary societies. The book will be of particular interest to scholars in comparing western societies and welfare states as well as to scholars seeking to understand changing work-life policies and family life in societies with different social and historical pathways.
