English Learners Left Behind

Standardized Testing as Language Policy

Multilingual Matters In the wake of recent federal legislation entitled **No Child Left Behind**, high-stakes standardized testing for accountability purposes is being emphasized in educational systems across the U.S. for all students - including **English Language Learners (ELLs)**. Yet language proficiency mediates test performance, so ELLs typically receive scores far below those of other students. This book explores how tests have become *de facto* language policy in schools, shaping what is taught in school, how it is taught, and in what language(s) it is taught. In New York City, while most schools responded to testing by increasing the amount of English instruction offered to ELLs, a few schools have preserved native language instruction instead. Moreover, this research documents how tests are a defining force in the daily lives of ELLs and the educators who serve them.

Building Thinking Classrooms in Mathematics, Grades K-12

14 Teaching Practices for Enhancing Learning

Corwin Press A thinking student is an engaged student Teachers often find it difficult to implement lessons that help students go beyond rote memorization and repetitive calculations. In fact, institutional norms and habits that permeate all classrooms can actually be enabling "non-thinking" student behavior. Sparked by observing teachers struggle to implement rich mathematics tasks to engage students in deep thinking, Peter Liljedahl has translated his 15 years of research into this practical guide on how to move toward a thinking classroom. **Building Thinking Classrooms in Mathematics, Grades K-12** helps teachers implement 14 optimal practices for thinking that create an ideal setting for deep mathematics learning to occur. This guide Provides the what, why, and how of each practice and answers teachers' most frequently asked questions Includes firsthand accounts of how these practices foster thinking through teacher and student interviews and student work samples Offers a plethora of macro moves, micro moves, and rich tasks to get started Organizes the 14 practices into four toolkits that can be implemented in order and built on throughout the year When combined, these unique research-based practices create the optimal conditions for learner-centered, student-owned deep mathematical thinking and learning, and have the power to transform mathematics classrooms like never before.

Writing Instruction That Works

Proven Methods for Middle and High School Classrooms

Teachers College Press Backed by solid research, *Writing Instruction That Works* answers the following question: What is writing instruction today and what can it be tomorrow? This up-to-date, comprehensive book identifies areas of concern for the ways that writing is being taught in today's secondary schools. The authors offer far-reaching direction for improving writing instruction that assist both student literacy and subject learning. They provide many examples of successful writing practices in each of the four core academic subjects (English, mathematics, science, and social studies/history), along with guidance for meeting the Common Core standards. The text also includes sections on Technology and the Teaching of Writing and English Language Learners.

The 60-Second Novelist

What 22,613 People Taught Me About Life

HCI On Sunday, April 24, 1983, at about 2 p.m., I carried my 28 -pound 1953 Royal typewriter and a folding chair through the stiff wind of Chicago's Michigan Avenue, In front of the Old Water, Tower, I opened the folding chair, sat down with the typewriter in my lap and taped a sign to the back of it "60-Second Novels, Written While you Wait." So begins the most original book in a generation—Dan Hurley's inspiring true tale of how he escaped his desk job to write the life: stories of over 22,613 people (and counting!), from Chicago to New York, in Iowa farmhouses, Midwestern, malls and California convenience stores. Hurley has listened as children and crack addicts, the homeless and the famous, poured out their confessions and a lifetime of wisdom. Now he shares the most incredible true stories he's heard (including the one from a pretty woman named Alice; whom he ended up marrying) and what they taught him about life,

love, health, money and making dreams -come true. With over one hundred photographs and sixty of the original stories he wrote for Vanna White, Tom Brokaw and thousands of, other people you've never heard of You will laugh, cry, and feel as..though Dan packed you into his suitcase alongside his typewriter.

Allocating Federal Funds for State Programs for English Language Learners

National Academies Press As the United States continues to be a nation of immigrants and their children, the nation's school systems face increased enrollments of students whose primary language is not English. With the 2001 reauthorization of the Elementary and Secondary Education Act (ESEA) in the No Child Left Behind Act (NCLB), the allocation of federal funds for programs to assist these students to be proficient in English became formula-based: 80 percent on the basis of the population of children with limited English proficiency¹ and 20 percent on the basis of the population of recently immigrated children and youth. Title III of NCLB directs the U.S. Department of Education to allocate funds on the basis of the more accurate of two allowable data sources: the number of students reported to the federal government by each state education agency or data from the American Community Survey (ACS). The department determined that the ACS estimates are more accurate, and since 2005, those data have been basis for the federal distribution of Title III funds. Subsequently, analyses of the two data sources have raised concerns about that decision, especially because the two allowable data sources would allocate quite different amounts to the states. In addition, while shortcomings were noted in the data provided by the states, the ACS estimates were shown to fluctuate between years, causing concern among the states about the unpredictability and unevenness of program funding. In this context, the U.S. Department of Education commissioned the National Research Council to address the accuracy of the estimates from the two data sources and the factors that influence the estimates. The resulting book also considers means of increasing the accuracy of the data sources or alternative data sources that could be used for allocation purposes.
