The cardiovascular system serves to carry essential compounds to the tissues and to remove metabolic by-products. It also plays an important role in maintaining homeostasis, and functions directly or indirectly in the regulation of body temperature, oxygen supply, nutrient distribution, water and electrolyte balance, and endocrine activity. Consisting of a pump, connecting tubes, exchange membranes and blood, this system is governed by a diverse and complex array of regulatory mechanisms, encompassing central neural, autonomic, endocrine, paracrine, and autocrine control. Drugs used in the treatment of cardiovascular disease are disseminated widely in western industrialized countries. In the US alone, nearly \$18 billion was spent on drugs for the treatment of cardiovascular disease and stroke in 1999. This Handbook contains records for all the major drugs that directly affect the cardiovascular system. Monographs are provided for over 1900 cardiovascular agents. For each main entry, the following information is provided: the chemical name and a list of proprietary names and synonyms; the Chemical Abstracts Service (CAS) Registry Number; the European Inventory of Existing Commercial Chemical Substances (EINECS) number; and the Merck Index (12th edition) number. Make the most of your holiday with The Rough Guide to Havana Modern Architecture in Mexico City History, Representation, and the Shaping of a Capital [University of Pittsburgh Press](#) Mexico City became one of the centers of architectural modernism in the Americas in the first half of the twentieth century. Invigorated by insights drawn from the first published histories of Mexican colonial architecture, which suggested that Mexico possessed a distinctive architecture and culture, beginning in the 1920s a new generation of architects created profoundly visual modern buildings intended to convey Mexico's unique cultural character. By midcentury these architects and their students had rewritten the country's architectural history and transformed the capital into a metropolis where new buildings that evoked pre-conquest, colonial, and International Style architecture coexisted. Through an exploration of schools, a university campus, a government ministry, a workers' park, and houses for Diego Rivera and Luis Barragán, Kathryn O'Rourke offers a new interpretation of modern architecture in the Mexican capital, showing close links between design, evolving understandings of national architectural history, folk art, and social reform. This book demonstrates why creating a distinctively Mexican architecture captivated architects whose work was formally dissimilar, and how that concern became central to the profession.
