OCCUPATIONAL OUTLOOK HANDBOOK

BEHAVIORAL RISK MANAGEMENT

MANAGING THE PSYCHOLOGY THAT DRIVES DECISIONS AND INFLUENCES OPERATIONAL RISK

[Springer](#) The psychological dimension of managing risk is of crucial importance, and its study has led to the identification of specific do's and don'ts. Those with an understanding of the psychology underlying risk and the skills to recognize its manifestation in practice, have the opportunity to develop frameworks that embody the do's and don'ts, thereby producing sound judgments and good decisions. Those lacking the understanding and the skills are destined to be more hit and miss in their approach to risk management, doing the don'ts and not doing the do's. Virtually every major risk management catastrophe in the last fifteen years has psychological pitfalls at its root. The list of catastrophes includes the 2008 bankruptcy of Lehman Brothers and subsequent global financial crisis, the 2010 explosion at BP's Macondo well in the Gulf of Mexico and the 2011 nuclear meltdown at the Fukushima Daiichi power plant. A critical lesson from psychological studies for those involved in risk management is that people's judgments and decisions about risk vary with type of circumstance. In Behavioral Risk Management readers will learn that there are specific actions that organizations can undertake to incorporate understanding, recognition, and behavioral interventions into the practice of risk management. There are many examples throughout the book that illustrate doing the don'ts. The chapters in the first part of the book introduce the main ideas, and the chapters in the latter part

provide insight into how to apply those ideas to the practical world in which risk managers operate.

STRATEGIES IN PERSONAL FINANCE

BASIC INVESTMENT PRINCIPLES FOR TODAY AND TOMORROW

Purdue University Press Every family should have financial goals for the future. Being unprepared can lead to monetary chaos. Financial Management of Your Future deals with strategies for accomplishing financial goals. What investment returns are necessary to achieve explicit family goals? How are returns logically related to risks for investment opportunities that are considered? Can different families have different tolerances for experiencing investment risk? Why is asset allocation the key investment decision for most families? What are the characteristics and valuations of bonds, stocks, mutual funds, real estate and international securities that a family might consider? How should a family construct, monitor, and revise a portfolio of investments over time? How should careful estate planning be done by a family in order to delay or avoid taxes in passing on property to their children, grandchildren, and favorite charities? And how can some of the concepts and techniques from "modern portfolio theory" be helpful to a family as it attempts to answer these questions? This book deals with financial strategies for three adult age categories: (1) Families of ages twenty to forty in the earlier years of active employment, child raising, and the beginning of saving for retirement; (2) Families of ages forty to sixty in their years of maximum income, high educational expenses for their children, and more serious thinking about forthcoming retirement; and (3) Families of ages sixty to eighty having retired or approaching full retirement.
