Health Education

Creating Strategies for School & Community Health

Jones & Bartlett Learning The skills necessary to plan and deliver efficient health education programs are fundamentally the same, whether it's in a classroom, workplace, hospital, or community. Health Education: Creating Strategies for School & Community Health, Third Edition provides the tools to make appropriate programming decisions based on the needs of the clients and the educational settings. It encourages the systematic development of sound, effective, and appropriate presentation methods and demonstrates the evolving state of health education. The philosophy presented in this text is based on the premise that the core of health education is the process of health education. It is a must-have resource for health education methods courses.

Totally Awesome Strategies for Teaching Health

Writing for Publication

Transitions and Tools that Support Scholars' Success

Springer This book offers systematic instruction and evidence-based guidance to academic authors. It demystifies scholarly writing and helps build both confidence and skill in aspiring and experienced authors. The first part of the book focuses on the author's role, writing's risks and rewards, practical strategies for improving writing, and ethical issues. Part Two focuses on the most common writing tasks: conference proposals, practical articles, research articles, and books. Each chapter is replete with specific examples, templates to generate a first draft, and checklists or rubrics for self-evaluation. The final section of the book counsels graduate students and professors on selecting the most promising projects; generating multiple related, yet distinctive, publications from the same body of work; and using writing as a tool for professional development. Written by a team that represents outstanding teaching, award-winning writing, and extensive editorial experience, the book leads teacher/scholar/authors to replace the old "publish or perish" dictum with a different, growth-seeking orientation: publish and flourish.

Physical Activity and Health Promotion in the Early Years

Effective Strategies for Early Childhood Educators

Springer This book focuses on improving well-being among young children. It provides a theoretical base explaining why physical activity is important, and offers practical strategies for increasing health and well-being in early childhood settings. It takes ancient wisdom on the mind and body connection, applies it to the youngest children, and supports it with current empirical and international evidence—all with an eye toward improving wellness across the lifespan. The many topics discussed in the book include children's motor skills, movement, interaction, physical literacy, the use of video games, dog ownership, developmental delays, as well as strategies to improve physical activities in the classroom and broader contexts. In recent years, children's health has become a priority worldwide. Topics such as "screen time" "sedentary behavior" and "childhood obesity" have become important issues everywhere- in the news, in schools, in community and commercial settings, and among health care providers. Limiting sedentary behavior, increasing physical activity, and maintaining a nutritious diet are three fundamental needs during early childhood. Preschool

years are a time when children begin to explore the world around them, and develop more vivid understandings of their surroundings. As this book shows, the early years may be the best time to teach wellness concepts and assist young children in establishing healthy lifestyle habits.

Educator Stress

An Occupational Health Perspective

Springer This book brings together the most current thinking and research on educator stress and how education systems can support quality teachers and quality education. It adopts an occupational health perspective to examine the problem of educator stress and presents theory-driven intervention strategies to reduce stress load and support educator resilience and healthy school organizations. The book provides an international perspective on key challenges facing educators such as teacher stress, teacher retention, training effective teachers, teacher accountability, cyber-bullying in schools, and developing healthy school systems. Divided into four parts, the book starts out by introducing and defining the problem of educator stress internationally and examining educator stress in the context of school, education system, and education policy factors. Part I includes chapters on educator mental health and well-being, stress-related biological vulnerabilities, the relation of stress to teaching self-efficacy, turnover in charter schools, and the role of culture in educator stress. Part II reviews the main conceptual models that explain educator stress while applying an occupational

health framework to education contexts which stresses the role of organizational factors, including work organization and work practices. It ends with a proposal of a dynamic integrative theory of educator stress, which highlights the changing nature of educator stress with time and context. Part III starts with the definition of what constitute healthy school organizations as a backdrop to the following chapters which review the application of occupational health psychology theories and intervention approaches to reducing educator stress, promoting teacher resources and developing healthy school systems. Chapters include interventions at the individual, individual-organizational interface and organizational levels. Part III ends with a chapter addressing cyber-bullying, a new challenge affecting schools and teachers. Part IV discusses the implications for research, practice and policy in education, including teacher training and development. In addition, it presents a review of methodological issues facing researchers on educator stress and identifies future trends for research on this topic, including the use of ecological momentary assessment in educator stress research. The editors' concluding comments reflect upon the application of an occupational health perspective to advance research, practice and policy directed at reducing stress in educators, and promoting teacher and school well-being.
