It documents the case of a critically important war fighting acquisition program from initial needs identification and program start in 2006 through production and fielding in the period 2007-2010. The analysis focuses on the entire process of acquisition and contracting from concept development through getting the weapons system into action in Iraq, Afghanistan and elsewhere. The Mine Resistant Ambush Protected vehicles program (MRAP) is a rapid acquisition program procured within the context of the US Department of Defense's Acquisition Management and Joint Capabilities Integration and Development System (JCIDS) framework. The analysis in this book answers the following question: What are the key factors that explain the success of the MRAP program, with success defined as meeting program objectives and warfighter needs? In addition, this book addresses the critical trade-offs made within the MRAP program to develop it rapidly, and some of the potential long-term impacts of these decisions, both positive and negative, for rapid defense asset acquisition in time of war. **Beneath the Cherry Tree** America Star Books Police detective Frank Gloverfield is led on a chase through the cities underbelly, chasing the most heinous criminal of his long and storied career. US Army and Marine Corps MRAPs Mine Resistant Ambush Protected Vehicles** Bloomsbury Publishing The Mine Resistant Ambush Protected (MRAP) vehicle is the newest land warfare system in the United States Army and Marine Corps inventory. Designed to meet the challenges of operating in a counterinsurgency environment, the MRAP has taken survivability to a new level. MRAPs are currently manufactured by three companies: BAE Systems, Navistar International Military Group, and Force Protection Inc. Each company manufactures an MRAP according to one of three classifications set by the US Department of Defense: Category I, Category II, or Category III. The Category I MRAPs are designed for urban combat. Category II covers the MRAPs designed for convoy security, medical evacuation, and explosive ordnance disposal. The Category III MRAP performs the same function as Category II but is designed to carry more personnel. Since their introduction in 2007, MRAPs have performed remarkably in the asymmetric warfare environment. Their unique design and survivability characteristics have saved the lives hundreds of soldiers who otherwise would have been lost to landmines or IED attacks. As with any combat system, however, the MRAP is not without its drawbacks. **If You're Reading This, It's Too Late** Little, Brown Books for Young Readers Beware! Dangerous secrets lie between the pages of this book. OK, I warned you. But if you think I'll give anything away, or tell you that this is the sequel to my first literary endeavor, *The Name of This Book is Secret*, you're wrong. I'm not going to remind you of how we last left our heroes, Cass and Max-Ernest, as they awaited initiation into the mysterious Terces Society, or the ongoing fight against the evil Dr. L and Ms. Mauvais. I certainly won't be telling you about how the kids stumble upon the Museum of Magic, where they finally meet the amazing Pietro! Oh, blast! I've done it again. Well, at least I didn't tell you about the missing Sound Prism, the nefarious Lord Pharaoh, or the mysterious creature born in a bottle over 500 years ago, the key to the biggest secret of all. I really can't help myself, now can I? Let's face it - if you're reading this, it's too late. **Foreign Trade Statistics of Pakistan Introduction to Modeling and Control of Internal Combustion Engine Systems** Springer Science & Business Media Internal combustion engines still have a potential for substantial improvements, particularly with regard to fuel efficiency and environmental compatibility. These goals can be achieved with help of control systems. *Modeling and Control of Internal Combustion Engines (ICE)* addresses these issues by offering an introduction to cost-effective model-based control system design for ICE. The primary emphasis is put on the ICE and its auxiliary devices. Mathematical models for these processes are developed in the text and selected feedforward and feedback control problems are discussed. The appendix contains a summary of the most important controller analysis and design methods, and a case study that analyzes a simplified idle-speed control problem. The book is written for students interested in the design of classical and novel ICE control systems. **British Columbia Lumberman Popular Mechanics Popular Mechanics Popular Mechanics** inspires, instructs and influences readers to help them master the modern world.
