ALFA ROMEO 155/156/147 COMPETITION TOURING CARS

THE DEVELOPMENT AND RACING HISTORY

Veloce Publishing Ltd After saving Alfa Romeo from oblivion in 1987, it took Fiat nearly five years to debut the first new Alfa produced under its control. This is the story of how the competition versions of the 155/156/147 family of cars were developed and subsequently raced to many championship titles and race wins. Alfa Romeo's 155 saloon was a comprehensively successful racing touring car that won the German and world-wide DTM Championship, and later ITC races. The model also took on the role of representing the company in national touring car championships throughout the world, most notably winning the British Touring Car Championship in 1994. The 156 was Alfa's successor to the 155 and was also raced with much success. This book follows the development and competition history of this model too, along with its sibling, the 147. Together, these models kept the Alfa Romeo name at the pinnacle of motor sport for many years, from 1992 to 2006, and will become future motorsport classics.

TRAUMATIC BRAIN INJURY

METHODS FOR CLINICAL AND FORENSIC NEUROPSYCHIATRIC ASSESSMENT, THIRD EDITION

CRC Press **Traumatic Brain Injury: Methods for Clinical and Forensic Neuropsychiatric Assessment, Third Edition** provides physicians and psychologists with a scientifically based schema for the clinical evaluation of traumatic brain injury (TBI). The book assists physicians and psychologists in developing treatment plans for patients who have sustained TBIs and also guides those providing forensic analysis to lawyers, insurance bodies, workers' compensation systems, triers of fact, and other stakeholders in the adjudication of victims of TBI. The procedures and recommendations in this book are grounded in highly referenced evidence-based science but also come from more than 5000 cases wherein the author and contributors have personally examined individuals who have sustained a TBI, or who claim to have sustained a TBI. This edition has been entirely rewritten. The style now follows a more traditional neuropsychiatric format than previous editions. Since the last edition, there has been increased awareness and scientific study regarding the effects of blast brain injury as a consequence of US military experiences in Afghanistan and Iraq. There is also increased interest in the phenomenology of mild traumatic brain injury and, in particular, the forensic complications associated with evaluations of this disorder. Chronic traumatic encephalopathy has also received significant scrutiny in the last decade, possibly associated with sports injuries. This book is a comprehensive resource for clinicians treating patients as well as for forensic specialists. Its purpose remains the same as in prior editions—to provide physicians or psychologists with a practical method for an effective evaluation of TBI based upon known scientific principles of brain-behavior relationships and state-of-the-art clinical, neuroimaging, neuropsychological, and psychological techniques.

This volume brings together contributions from leading international experts in the field and discusses pathogenesis, pathophysiology, clinical and radiologic manifestations, prevention and treatment modalities, and future directions for research and practice. Genetic forms of SVD are discussed, as well as the rapid development of neuroimaging techniques as tools for screening and treatment. This authoritative book is essential reading for neurologists, stroke physicians, geriatricians, and interventional neuroradiologists, as well as researchers in the fields of aging and dementia.
