ASK THE SALES COACH-PRACTICAL ANSWERS TO THE QUESTIONS SALES PEOPLE ASK MOST

B2B Sales Connections Inc. Contrary to the popular belief, sales people don't rely on "the gift of the gab" to be successful. Actually, the opposite is true. The best sales professionals spend far more time asking and listening than they do talking and selling. They ask questions of their customers; they ask questions of their colleagues, and they ask questions of their managers. If Oxford defines curiosity as the strong desire to know or learn something, then by that definition, sales people are curious by nature. In fact, that's how sales professionals learn to be professional in the first place. This is a collection of practical answers to questions sales people ask most. Written by Susan A. Enns, a professional sales coach with a proven track record of sales excellence over her 30 plus year career. Her accomplishments include consecutively being the top sales rep in Canada, managing the top sales branch, and achieving outstanding sales growth in a national channel sales organization. She has written several books about sales and sales management and has created numerous automated sales tools. Her work has been published in several locations numerous times and has sold on five separate continents. As such, over the years, Susan has been asked many questions by many sales people. After a while, she saw that sales people, regardless of their experience, the products they sell, the industries in which they operate, or the countries where they sell, all share similar curiosities. In other words, although the wording may be different when asked in an email or when asked in person, sales people all ask the same questions, the most common of which are answered in this ebook. As the old saying goes, the only stupid questions are the ones unasked. As a sales professional, you should never be afraid to "Ask the Sales Coach" because you will learn so much from the answers! - "Susan really knows the selling world. She's honest, articulate, bright, giving, highly competent, personable and a top professional. Welcome her. It's the right thing to do." - "Our company hired Susan as our sales coach. She has helped me make more appointments, close more deals and make more money. The 3 most important concepts in sales. I would recommend any sales force hire her to help boost

business sales". - "Susan ...understands the sales process intimately and is able to create a management process around it that drives sales people to accomplish their goals." - "Susan knows her stuff. She brings many years of great sales experience and success to anyone who wished to improve their skills in sales. She is very personable, and is not afraid to tell it like it is. I would recommend anyone (and I have) to Susan, her website, her books if you want to become a better sales person." - "Thanks for the training... I made my quota this year in May!"

TEACHING EVIDENCE-BASED WRITING: FICTION

TEXTS AND LESSONS FOR SPOT-ON WRITING ABOUT READING

Corwin Press One in a million. Yes, that's how rare it is to have so many write-about-reading strategies so beautifully put to use. Each year Leslie Blauman guides her students to become highly skilled at supporting their thinking about texts, and in Evidence-Based Writing: Fiction, she shares her win-win process. Leslie combed the ELA standards and all her favorite books and built a lesson structure you can use in two ways: with an entire text or with just the excerpts she's included in the book. Addressing Evidence, Character, Theme, Point of View, Visuals, Words and Structure, each section includes: Lessons you can use as teacher demonstrations or for guided practice, with Best the Test tips on how to authentically teach the skills that show up on exams with the texts you teach. Prompt Pages serve as handy references, giving students the key questions to ask themselves as they read any text and consider how an author's meaning and structure combine. Excerpts-to-Write About Pages feature carefully selected passages from novels, short stories, and picture books you already know and love and questions that require students to discover a text's literal

and deeper meanings. Write-About-Reading Templates scaffold students to think about a text efficiently by focusing on its critical literary elements or text structure demands and help them rehearse for more extensive responses. Writing Tasks invite students to transform their notes into a more developed paragraph or essay with sufficiently challenging tasks geared for grades 6-8. And best of all, your students gain a confidence in responding to complex texts and ideas that will serve them well in school, on tests, and in any situation when they are asked: What are you basing that on? Show me how you know.

DEVELOPING ASSESSMENTS FOR THE NEXT GENERATION SCIENCE STANDARDS

National Academies Press Assessments, understood as tools for tracking what and how well students have learned, play a critical role in the classroom. *Developing Assessments for the Next Generation Science Standards* develops an approach to science assessment to meet the vision of science education for the future as it has been elaborated in *A Framework for K-12 Science Education (Framework)* and *Next Generation Science Standards (NGSS)*. These documents are brand new and the changes they call for are barely under way, but the new assessments will be needed as soon as states and districts begin the process of implementing the NGSS and changing their approach to science education. The new Framework and the NGSS are designed to guide educators in significantly altering the way K-12 science is taught. The Framework is aimed at making science education more closely resemble the way scientists actually work and think, and making instruction reflect research on learning that demonstrates the importance of building coherent understandings over time. It structures science education around three dimensions - the practices through which scientists and engineers do their work, the key crosscutting concepts that cut across disciplines, and the core ideas of the disciplines - and argues that they should be interwoven in every aspect of science education, building in sophistication as students progress through grades K-12. *Developing Assessments for the Next Generation Science Standards* recommends strategies for developing assessments that yield valid measures of student proficiency in science as described in the new Framework. This report reviews recent and current work in science assessment to determine which aspects of the Framework's vision can be assessed with available techniques and what additional research and development will be needed to support an assessment system that fully meets that vision. The report offers a systems approach to science assessment, in which a range of assessment strategies are designed to answer different kinds of questions with appropriate degrees of specificity and provide results that complement one another. *Developing Assessments for the Next Generation Science Standards* makes the case that a science assessment system that meets the Framework's vision should consist of assessments designed to support classroom instruction, assessments designed to monitor science learning on a broader scale, and indicators designed to track opportunity to learn. New standards for science education make clear that new modes of assessment designed to measure the

integrated learning they promote are essential. The recommendations of this report will be key to making sure that the dramatic changes in curriculum and instruction signaled by Framework and the NGSS reduce inequities in science education and raise the level of science education for all students.

HOW PEOPLE LEARN II

LEARNERS, CONTEXTS, AND CULTURES

National Academies Press There are many reasons to be curious about the way people learn, and the past several decades have seen an explosion of research that has important implications for individual learning, schooling, workforce training, and policy. In 2000, How People Learn: Brain, Mind, Experience, and School: Expanded Edition was published and its influence has been wide and deep. The report summarized insights on the nature of learning in school-aged children; described principles for the design of effective learning environments; and provided examples of how that could be implemented in the classroom. Since then, researchers have continued to investigate the nature of

learning and have generated new findings related to the neurological processes involved in learning, individual and cultural variability related to learning, and educational technologies. In addition to expanding scientific understanding of the mechanisms of learning and how the brain adapts throughout the lifespan, there have been important discoveries about influences on learning, particularly sociocultural factors and the structure of learning environments. **How People Learn II: Learners, Contexts, and Cultures** provides a much-needed update incorporating insights gained from this research over the past decade. The book expands on the foundation laid out in the 2000 report and takes an in-depth look at the constellation of influences that affect individual learning. **How People Learn II** will become an indispensable resource to understand learning throughout the lifespan for educators of students and adults.

UNDERSTANDING BY DESIGN

THE WRITING REVOLUTION

A GUIDE TO ADVANCING THINKING THROUGH WRITING IN ALL SUBJECTS AND GRADES

John Wiley & Sons "HELP! My Students Can't Write!" Why You Need a Writing Revolution in Your Classroom and How to Lead It. The Writing Revolution (TWR) provides a clear method of instruction that you can use no matter what subject or grade level you teach. The model, also known as The Hochman Method, has demonstrated, over and over, that it can turn weak writers into strong communicators by focusing on specific techniques that match their needs and by providing them with targeted feedback. Insurmountable as the challenges faced by many students may seem, TWR can make a dramatic difference. And the method does more than improve writing skills. It also helps: Boost reading comprehension Improve organizational and study skills Enhance speaking abilities Develop analytical capabilities TWR is as much a method of teaching content as it is a method of teaching writing. There's no separate writing block and no separate writing curriculum. Instead, teachers of all subjects adapt the TWR strategies and activities to their current curriculum and weave them into their content instruction. But perhaps what's most revolutionary about the TWR method is that it takes the mystery out of learning to write well. It breaks the writing process down into manageable chunks and then has students practice the chunks they need, repeatedly, while also learning content.
