## Mummy Portraits of Roman Egypt

### Emerging Research from the APPEAR Project

**Getty Publications** This publication presents fascinating new findings on ancient Romano-Egyptian funerary portraits preserved in international collections. Once interred with mummified remains, nearly a thousand funerary portraits from Roman Egypt survive today in museums around the world, bringing viewers face-to-face with people who lived two thousand years ago. Until recently, few of these paintings had undergone in-depth study to determine by whom they were made and how. An international collaboration known as APPEAR (Ancient Panel Paintings: Examination, Analysis, and Research) was launched in 2013 to promote the study of these objects and to gather scientific and historical findings into a shared database. The first phase of the project was marked with a two-day conference at the Getty Villa. Conservators, scientists, and curators presented new research on topics such as provenance and collecting, comparisons of works across institutions, and scientific studies of pigments, binders, and supports. The papers and posters from the conference are collected in this publication, which offers the most up-to-date information available about these fascinating remnants of the ancient world.

## Photogrammetric Applications for Cultural Heritage

### Guidance for Good Practice

This guidance covers the practical application of photogrammetry in recording cultural heritage, with particular reference to structure from motion (SfM) techniques. Our audience for this document includes survey contractors, archaeological contractors, voluntary organisations and specialists. Photogrammetric image acquisition and processing, until recently requiring a considerable investment in hardware and software, are now possible at a fraction of their former cost. This has led to a huge increase in the use of photogrammetry in cultural heritage recording. The skills required to apply the techniques successfully and accurately are discussed, and background information on how various parts of the process work is provided so that better results can be achieved through better understanding. Photogrammetry is characterised by its versatility, and is applicable over a wide range of scales, from landscapes to small objects. The particular requirements needed at these different scales are outlined, and both imaging techniques and useful ancillary equipment are described. The different types of outputs are discussed, including their suitability for further interrogation using a range of established analytical techniques and the presentation options available. A range of case studies illustrates the application of photogrammetry across a variety of projects that broadly reflect the areas discussed in the text. This document is one of a number of Historic England technical advice documents on how to survey historic places.

### Clear Thinking in a Blurry World

A ground-up Canadian text, *Clear Thinking in a Blurry World* offers a new way of examining the discipline of critical thinking. This text focuses on critical thinking as it applies to philosophy and cognition, rather than the typical 'formal logic lite' approach. *Clear Thinking in a Blurry World* includes many practical sections that are not commonly found in books in this market—material on numeracy and statistical analysis. Through this text, students will examine sources of information—from social exchanges, to science, to mainstream media—in detail, as well as the cognitive and social psychology of biases. This text aims directly at teaching, or beginning to teach, a broad set of knowledge, skills, and habits properly called critical reasoning faculties. Students using this text will enhance their ability to: -recognize and classify reliable and unreliable forms of reasoning -understand reasoning about evidence, including some central concepts of statistics and probability -anticipate the cognitive and social factors that make us susceptible to particular reasoning errors -critically examine science—and popular conceptions of science—in relation to the problem of how to believe reasonable things -examine the media and other main sources of information about the world to see how they might be unreliable, and under what circumstances
