Neuropalliative Care A Guide to Improving the Lives of Patients and Families Affected by Neurologic Disease [Springer](#) *This comprehensive guide thoroughly covers all aspects of neuropalliative care, from symptom-specific considerations, to improving communication between clinicians, patients and families. Neuropalliative Care: A Guide to Improving the Lives of Patients and Families Affected by Neurologic Disease addresses clinical considerations for diseases such as dementia, multiple sclerosis, and severe acute brain injury, as well discussing the other challenges facing palliative care patients that are not currently sufficiently met under current models of care. This includes methods of effective communication, supporting the caregiver, how to make difficult treatment decisions in the face of uncertainty, managing grief, guilt and anger, and treating the pain itself. Written by leaders in the field of neuropalliative care, this book is an exceptional, well-rounded resource of neuropalliative care, serving as a reference for all clinicians caring for patients with neurological disease and their families: neurologists and palliative care specialists, physicians, nurses, chaplains, social workers, as well as trainees in these areas.* **Surgical Palliative Care** [Oxford University Press, USA](#) *Palliative care has become increasingly important across the spectrum of healthcare, and with it, the need for education and training of a broad range of medical practitioners not previously associated with this field of care. Part of the Integrating Palliative Care series, this volume on surgical palliative care guides readers through the core palliative skills and knowledge needed to deliver high value care for patients with life-limiting, critical, and terminal illness under surgical care. Chapters explore the historical, philosophical, and spiritual principles of surgical palliative care, and follow the progression of the seriously ill surgical patient's journey from the pre-operative encounter, to the invasive procedure, to the post-operative setting, and on to survivorship. An overview of the future of surgical palliative care education and research rounds out the text. Surgical Palliative Care is an ideal resource for surgeons, surgical nurses, intensivists, and other practitioners who wish to learn more about integrating palliative care into the surgical field. **A***

Field Manual for Palliative Care in Humanitarian Crises Oxford University

Press, USA As humanitarian aid organizations have evolved, there is a growing recognition that incorporating palliative care into aid efforts is an essential part of providing the best care possible. A *Field Manual for Palliative Care in Humanitarian Crises* represents the first-ever effort at educating and providing guidance for clinicians not formally trained in palliative care in how to incorporate its principles into their work in crisis situations. Written by a team of international experts, this pocket-sized manual identifies the needs of people affected by natural hazards, political or ethnic conflict, epidemics of life-threatening infections, and other humanitarian crises. Later chapters explore topics including pain management, skin conditions, non-communicable diseases, palliative care emergencies, the law and ethics of end of life care, and more. Concise and highly accessible, this manual is an ideal educational tool pre-deployment or during fieldwork for clinicians involved in planning and providing humanitarian aid, local care providers, and medical trainees.

Pediatric Palliative Care Oxford University Press, USA Pediatric palliative care is a field of significant growth as health care systems recognize the benefits of palliative care in areas such as neonatal intensive care, pediatric ICU, and chronic pediatric illnesses. *Pediatric Palliative Care*, the fourth volume in the *HPNA Palliative Nursing Manuals* series, highlights key issues related to the field. Chapters address pediatric hospice, symptom management, pediatric pain, the neonatal intensive care unit, transitioning goals of care between the emergency department and intensive care unit, and grief and bereavement in pediatric palliative care. The content of the concise, clinically focused volumes in the *HPNA Palliative Nursing Manuals* series is one resource for nurses preparing for specialty certification exams and provides a quick-reference in daily practice. Plentiful tables and patient teaching points make these volumes useful resources for nurses.

Compassionate Communities Case Studies from Britain and Europe Routledge Compassionate communities are communities that provide assistance for those in need of end of life care, separate from any official health service provision that may already be available within the community. This idea was developed in 2005 in Allan Kellehear's seminal volume-*Compassionate Cities: Public Health and End of Life Care*. In the ensuing ten years the theoretical aspects of the idea have been continually explored, primarily rehearsing academic concerns rather than practical ones. *Compassionate Communities: Case Studies from Britain and Europe* provides the first major volume describing and examining compassionate community experiments in end of life care from a highly practical perspective. Focusing on community development initiatives and practice challenges, the book offers practitioners and policy makers from the health and social care sectors practical discussions on the strengths and limitations of such initiatives. Furthermore, not limited to providing practice choices the book also offers an important and timely impetus for other practitioners and policy makers to begin thinking about developing their own possible compassionate communities. An essential read for academic, practitioner, and policy audiences in the fields of public health, community development, health social sciences, aged care, bereavement care, and hospice & palliative care, *Compassionate Communities* is one of only a handful of available books on end of life care that takes a strong health promotion and community development approach. **Research methods in**

palliative care OUP Oxford Palliative and end of life care are concerned with the physical, social, psychological and spiritual care of people with advanced disease. It currently has a poorly developed research base, but the need to improve this is increasingly recognised. One of the reasons for the lack of research - and the variable quality of the research that is undertaken - is the difficulty of conducting research with very ill and bereaved people. Standard and well-established research methods may need to be adapted to work in this context. This means that existing research methods textbooks may be of limited use to palliative care practitioners seeking to do research for the first time, or to more experienced researchers wanting to apply their knowledge in palliative care settings. This research methods textbook is the first to be written specifically for palliative care. It has been edited by four experienced palliative care academics with acknowledged expertise and international reputations in this field. It encompasses methods used in both clinical and health services research in palliative care, with sections on clinical, epidemiological, survey and qualitative research, as well as a section covering skills needed in any research project. Each chapter provides readers with an up to date overview of the research method in question, an understanding of its applicability to palliative care and of the particular challenges of using it in this setting. It is essential reading for all palliative care researchers. **Journal of Palliative Medicine Series Publication Dates April 2003-June 2004 Best Hospice and Palliative Medicine Specialist Ever Lined Journal for Daily Use, Gift for Hospice and Palliative Medicine Specialist** Lined 6x9 journal with 100 pages. This is the perfect and inexpensive appreciation or birthday gift for Hospice and Palliative Medicine Specialist to write, draw, doodle, sketch, put stickers, write memories, or take notes in. You can write your goals, take it to college, or make an unforgettable gift for your kids or your beloved one! **American Journal of Hospice & Palliative Medicine Issues in Palliative Care Research** Oxford University Press Symptom control, management of psychosocial and spiritual concerns, decision-making consistent with values and goals, and care of the imminently dying that is appropriate and sensitive are among the critical issues in palliative care. This book explores progress made and future goals. **Issues in Hospital and Hospice Research and Practice: 2013 Edition ScholarlyBrief** ScholarlyEditions *Issues in Hospital and Hospice Research and Practice: 2013 Edition* is a ScholarlyBrief™ that delivers timely, authoritative, comprehensive, and specialized information about Hospitals in a concise format. The editors have built *Issues in Hospital and Hospice Research and Practice: 2013 Edition* on the vast information databases of ScholarlyNews.™ You can expect the information about Hospitals in this book to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of *Issues in Hospital and Hospice Research and Practice: 2013 Edition* has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More information is available at <http://www.ScholarlyEditions.com/>. **Oxford Textbook of Palliative Medicine** Oxford University Press, USA The definitive Oxford Textbook of Palliative

Medicine, now in its fifth edition, has again been thoroughly updated to offer a truly global perspective in this field of extraordinary talent and thoughtfulness. Updated to include new sections devoted to assessment tools, care of patients with cancer, and the management of issues in the very young and the very old, this leading textbook covers all the new and emerging topics since its original publication in 1993. In addition, the multi-disciplinary nature of palliative care is emphasized throughout the book, covering areas from ethical and communication issues, the treatment of symptoms and the management of pain. The printed book is complemented with 12 months free access to the online version, which includes expanded chapter information and links from the references to primary research journal articles, ensuring this edition continues to be at the forefront of palliative medicine. This fifth edition of the Oxford Textbook of Palliative Medicine is dedicated to the memory of Professor Geoffrey Hanks, pioneer in the field of palliative medicine, and co-editor of the previous four editions. A truly comprehensive text, no hospital, hospice, palliative care service, or medical library should be without this essential source of information. **Palliative Care and Medicine for Older People Key Articles from the Medicine journal** Elsevier Health Sciences Palliative Care and Medicine for Older People is a new e-book in a collection of subject-themed e-books containing relevant key articles from Medicine. The e-books provide a perfect source of revision for post-graduate exams in clinical medicine and portfolio material for life-long learning. As well as mapping to the UK Core Medical Training curriculum, these e-books also enable anyone with a short-term interest in a specific area to buy individual articles at a price-point that will give affordable access to all readers (from medical students to GPs and practitioners in related areas). The quality of user experience on mobiles, tablets and laptops will be an added bonus for learning on the move. The whole board has been involved in the creation of this content and are therefore listed as authors on all the e-books. In addition we extend our warm thanks for their contribution to these e-books to the past Chairman Allister Vale (who stepped down from the board in 2015) and to John Mucklow, who stepped down in 2016. Derek Waller, on behalf of the Editorial Board About the journal The parent journal (www.medicinejournal.co.uk) is a rolling, continuously updated review of clinical medicine over a 4-year cycle covering all the important topics for core medical training. Its Editorial Board comprises some of Europe's most influential specialists. The journal's articles are refreshed, updated, augmented or replaced as appropriate each time the subject is due for revision to provide a concise overview of knowledge and practice core to the curriculum. Each article is written by invited experts and overseen by the relevant subject specialist on the Board. A trainee representative on the Board ensures relevance and accessibility for exam candidates. This textbook fills a niche with its evidence-based, multi-professional approach and global perspective ensured by the international team of editors and contributing authors. In the absence of an international curriculum for the study of palliative medicine, this textbook provides essential guidance for those both embarking upon a career in palliative medicine or already established in the field, and the structure and content have been constructed very much with this in mind. With an emphasis on providing a service anywhere in the world, including the important issue of palliative care in the developing nations, *Textbook of Palliative Medicine* offers a genuine alternative to the narrative approach of its competitors, and is an ideal complement to them. It is essential reading for all palliative care physicians in training and in practice, as well as palliative care nurses and other health professionals in the palliative care team **Evidence-based Practice of Palliative Medicine** Elsevier Health Sciences "*Evidence-Based Practice of Palliative Medicine*" is the only book that uses a practical, question-and-answer approach to address evidence-based decision making in palliative medicine. Dr. Nathan E. Goldstein and Dr. R. Sean Morrison equip you to evaluate the available evidence alongside of current practice guidelines, so you can provide optimal care for patients and families who are dealing with serious illness. **Research Methods in Palliative Care** Oxford University Press *Palliative and end of life care* are concerned with the physical, social, psychological and spiritual care of people with advanced disease. It currently has a poorly developed research base, but the need to improve this is increasingly recognised. One of the reasons for the lack of research - and the variable quality of the research that is undertaken - is the difficulty of conducting research with very ill and bereaved people. Standard and well-established research methods may need to be adapted to work in this context. This means that existing research methods textbooks may be of limited use to palliative care practitioners seeking to do research for the first time, or to more experienced researchers wanting to apply their knowledge in palliative care settings. This research methods textbook is the first to be written specifically for palliative care. It has been edited by four experienced palliative care academics with acknowledged expertise and

international reputations in this field. It encompasses methods used in both clinical and health services research in palliative care, with sections on clinical, epidemiological, survey and qualitative research, as well as a section covering skills needed in any research project. Each chapter provides readers with an up to date overview of the research method in question, an understanding of its applicability to palliative care and of the particular challenges of using it in this setting. It is essential reading for all palliative care researchers.

Hospice and Palliative Medicine and Supportive Care Flashcards Oxford University Press *Hospice and Palliative Medicine and Supportive Care Flashcards* is a comprehensive, evidence-based book of flashcards for clinicians caring for patients who require hospice and palliative care and supportive care. Written in a clinical scenario/vignette, question and answer format by experts with first-hand experience in the field, the flashcards are highly readable and serve as a source of fast answers to clinical questions in the field. A total of 300 flashcards are organized into chapters by symptom/disease and provide readers with up-to-date information that follow the core curriculum of American Board of Hospice and Palliative Medicine for ease of use and rapid review for exams. This book will equip care professionals with key concepts related to the assessment and management of palliative care, making it an ideal point-of-care quick reference material for physicians, nurse practitioners, fellows, residents, and students.

Internal Medicine Issues in Palliative Cancer Care Oxford University Press, USA Patients with advanced cancer may develop a number of clinical complications related to tumor progression or a variety of aggressive treatments. The majority of these patients are elderly, often with multiple co-morbidities that require appropriate assessment and management. In the palliative stage of their disease, patients undergo a progressive transition from active acute care to community-based hospice care. This transition requires modification in the diagnostic tests, monitoring procedures and pharmacological treatments to adjust them to the palliative and short-term nature of the care. *Internal Medicine Issues in Palliative Cancer Care* looks at internal medicine through a prognosis-based framework and provides a practical approach to maximizing comfort and quality of life while minimizing aggressive investigations and therapies for patients with life-limiting disease. Forty-six common internal medicine conditions are organized into nine clinical categories: pulmonary, cardiovascular, nephrologic and metabolic, gastrointestinal, hematologic, infectious, endocrine, rheumatologic, and neuropsychiatric. This evidence-based resource is ideal for educating clinicians delivering palliative care to cancer patients in acute care facilities about complex internal medicine problems, decision-making regarding diagnostics and therapeutics which require a good understanding of state-of-the-art internal medicine and palliative care principles.

Palliative and Serious Illness Patient Management for Physician Assistants Oxford University Press "From its beginning with Eugene Stead, MD at Duke University, the Mission of the Physician Assistant profession has been to create, increase or expand health care access in areas and populations with the greatest need.¹ Dr. Henry Silver's Child Health Associate Program at the University of Colorado is a good example as is Dr. Hu Myer's Alderson Broaddus Program which serves isolated rural communities in West Virginia.² Dr. Richard Smith's MEDEX Program at the University of Washington was also designed specifically to serve rural

and medical underserved communities of the Pacific Northwest.³-- **Guidance for Healthcare Ethics Committees** [Cambridge University Press](#) Every accredited American hospital is required to have a mechanism for handling ethical concerns; most hospitals satisfy this requirement by constituting an institutional healthcare ethics committee (HEC), a pattern which is repeated in most western countries. This text provides definitive, comprehensive guidance for members of healthcare ethics committees who find themselves confronted with ethically challenging situations. Each chapter includes learning objectives, clinical case studies and questions to stimulate discussion among committee members. Particular emphasis is given to consultation, as this often presents the greatest challenges to committee members. Each chapter stands alone as a teaching module, as well as forming part of a comprehensive volume. Written and edited by nationally and internationally recognized experts in bioethics, this is essential reading for every member of a healthcare ethics committee. **British Medical Journal (BMJ): Palliative Medicine** Presents a bibliography of texts related to palliative medicine, compiled from the electronic version of the "British Medical Journal" (BMJ). Notes the title, author, publication date, and type of article for each entry. Offers access to abstracts and full-text versions of editorials, news items, clinical reviews, and papers. Provides access to bibliographies on related topics, including various types of medicine. Links to the BMJ home page. **The Changing Face of Volunteering in Hospice and Palliative Care** [Oxford University Press](#) Volunteers have a long been involved in supporting the delivery of palliative care. Indeed in some countries, the range and quality of hospice and palliative care services depends on the involvement of volunteers. Hospice and palliative care services and volunteering are changing. As society develops, so too does volunteering. Volunteers have growing expectations of organizations, and increasingly seek roles that meet their needs and aspirations, rather than fitting in with organizational approaches. As hospice and palliative care services experience increasing and changing demands for their services due to aging populations with complex healthcare needs, we need to recognize that volunteers have a vital role to play in supporting the delivery of services of the future. The Changing Face of Volunteering in Hospice and Palliative Care explores the complex phenomenon that is volunteering in hospice and palliative care in different countries. It considers how and why volunteering is changing, through the contributions of authors from Western and Eastern Europe, North America, Australia, Africa, and India. It reflects on the influence of culture and organisational contexts, in addition to management approaches, legislative, and political influences, highlighting factors that contribute to the success of volunteering. Contributing to knowledge and understanding in the field of volunteering in hospice and palliative care internationally, this book highlights the factors that contribute to the success of volunteering models, allowing readers to see possibilities for change and find new ideas for innovative practice in their own setting. **Oxford Handbook of Palliative Care** [Oxford University Press](#) This practical guide briefly covers the historical and epidemiological background of palliative care and the growth of palliative medicine as a specialty, before dealing with major physical, psychological, spiritual, and symptom management issues from diagnosis to bereavement care. **Palliative Psychology Clinical Perspectives on an Emerging Specialty** [Oxford University](#)

Press Palliative Psychology provides clinical, evidence-based training in palliative and end of life care for clinical psychologists to accomplish specific therapeutic goals. Chapters provide a clear road map for approaching assessment and treatment by reviewing the use of psychotropic medications for patients with advanced and terminal illness, basic but important aspects of pain medication, in depth psychological and psychiatric assessment for patients with advanced illness and their caregivers, and assessment tools, highlighting the specific clinical contexts for their use. The volume also includes evidence-based psychotherapy models that have been shown effective in treating various manifestations of psychological distress in patients and caregivers. In addition to clinical topics, Palliative Psychology addresses crucial and often sensitive professional issues, including communication and collaboration with medical providers and issues of stress and burnout. Psychologists will learn how to best communicate the results of their assessments and treatment plan goals to other care providers in order to foster collaboration and better position themselves as advocates for their patients. Insight-oriented and practical suggestions will help clinicians manage the emotional intensity of this work and channel the therapeutic potential of their emotional reactions into their work with patients and caregivers.

Textbook of Palliative Care Springer Textbook of Palliative Care is a comprehensive, clinically relevant and state-of-the art book, aimed at advancing palliative care as a science, a clinical practice and as an art. Palliative care has been part of healthcare for over fifty years but we still find ourselves having to explain its nature and practice to colleagues and to the public in general. Healthcare education and training has been slow to recognize the vital importance of ensuring that all practitioners have a good understanding of what is involved in the care of people with serious or advanced illnesses and their families. However, the science of palliative care is advancing and our understanding concerning many aspects of palliative care is developing rapidly. The book is divided into separate sections for ease of use. Over 100 chapters written by experts in their given fields provide up-to-date information on a wide range of topics of relevance to those providing care towards the end of life no matter what the disease may be. We present a global perspective on contemporary and classic issues in palliative care with authors from a wide range of disciplines involved in this essential aspect of care. The Textbook includes sections addressing aspects such as symptom management and care provision, organization of care in different settings, care in specific disease groups, palliative care emergencies, ethics, public health approaches and research in palliative care. This Textbook will be of value to practitioners in all disciplines and professions where the care of people approaching death is important, specialists as well as non-specialists, in any setting where people with serious advanced illnesses are residing. It is also an important resource for researchers, policy-and decision-makers at national or regional levels. Neither the science nor the art of palliative care will stand still so we aim to keep this Textbook updated as the authors find new evidence and approaches to care.

Behavioral Intervention Research in Hospice and Palliative Care Building an Evidence Base Academic Press Behavioral Intervention Research in Hospice and Palliative Care: Building an Evidence Base sets forth research considerations and guidelines to build evidence-based interventions to improve end-of-life care. It is an in-depth

introduction to implementation research and showcases how a clinical need is identified to inform an intervention. The book extensively examines the various phases of intervention research, including design, implementation, evaluation, dissemination and translation. The book focuses on methodological, ethical and practical issues. The science behind the quality of hospice and palliative care lags behind that of traditional medical practice, despite the continuous growth of palliative care interdisciplinary teams. Researching, developing and testing strategies is essential to advancing the effectiveness and value of this care. Informs readers how to conduct intervention research toward identifying best care Advises readers on design, implementation and evaluation of research Provides step-by-step templates to develop an intervention study Includes mock protocols from successful intervention trials Synthesizes lessons learned by established intervention researchers in hospice and palliative care

Palliative Medicine A case-based manual OUP Oxford Palliative care is now an integral part of the undergraduate medical curriculum. Medical education across the board is adopting a case-based approach. This book uses a series of cases to illustrate critical points in palliative medicine. The case-studies have been carefully chosen to reflect real life clinical practice. The contributors illustrate, through the case studies, the desired skills, attitudes, and knowledge required in this field of medicine. Since publication of the second edition, many approaches to palliative care have been further refined and developed. Ongoing research has led to the improved use of existing medications, and the development of several new treatments. More is known about the psychosocial existential distress experienced by patients and their families resulting in an improved understanding by health care providers of how best to approach and assist those affected by advanced illness, and more is known about methadone and other medications with emerging uses. The third edition of this highly popular book continues to offer a panoramic view of palliative care. It introduces a number of new topics including Neurological Disorders, The Last Days, and Palliative Sedation.

The Ethics of Palliative Care European Perspectives This volume provides a picture of palliative care ethics in the European context. It should interest those involved in the delivery and management of palliative care services, as well as students and researchers.

Living with Ageing and Dying Palliative and End of Life Care for Older People OUP Oxford Ageing populations mean that palliative and end of life care for older people must assume greater priority. Indeed, there is an urgent need to improve the experiences of older people at the end of life, given that they have been identified as the 'disadvantaged dying'. To date, models of care are underpinned by the ideals of specialist palliative care which were developed to meet the needs of predominantly middle-aged and 'young old' people, and evidence suggests these may not be adequate for the older population group. This book identifies ways forward for improving the end of life experiences of older people by taking an interdisciplinary and international approach. Providing a synergy between the currently disparate literature of gerontology and palliative care, a wide range of leading international experts contribute to discussions regarding priority areas in relation to ageing and end of life care. Some authors take a theoretical focus, others a very practical approach rooted in their clinical and research experience. The issues covered are diverse, as are the countries in which discussions are contextualised.

Those working in both palliative care and gerontology will find the issues and advice discussed in this book hugely topical and of real practical value. **Topics in Palliative Care** [Oxford University Press](#) The rapidly evolving field of Palliative Care focuses on the management of phenomena that produce discomfort and that undermine the quality of life of patients with incurable medical disorders. The interdisciplinary clinical purview includes those factors - physical, psychological, social, and spiritual - that contribute to suffering, undermine the quality of life, and prevent a death with comfort and dignity. Palliative Care is a fundamental part of clinical practice, the "parallel universe" to therapies directed at cure or prolongation of life. All clinicians who treat patients with chronic life threatening diseases are engaged in palliative care, continually attempting to manage complex symptomatology and functional disturbances. The scientific foundation of palliative care is advancing, and similarly, methods are needed to highlight, for practitioners at the bedside, the findings of empirical research. *Topics in Palliative Care Series* is divided into sections that address a range of issues. Addressing aspects of symptom control, psychosocial functioning, spiritual or existential concerns, ethics, and other topics, the chapters in each section review the given area and focus on a small number of salient issues for analysis. The authors present and evaluate existing data, provide a context drawn from clinical and research settings, and integrate knowledge in a manner that is both practical and readable. The specific topics covered in Volume 5 are Cultural issues in Palliative Care, Palliative Care in Geriatrics, Communication Issues in Palliative Care, Outcomes Research in Palliative Care, Opioid Tolerance; Reality of Myth?, and Pain and other symptoms: Treatment Challenges. **Cicely Saunders Selected Writings 1958-2004** [Oxford University Press](#) A remarkable story of a personal vision and sense of calling this text provides an insight into the establishment of the hospice movement and its development world-wide. **Journal of Palliative Care Palliative Care Conversations Clinical and Applied Linguistic Perspectives** [Walter de Gruyter GmbH & Co KG](#) This book will be the first of its kind to offer intensive conversation analysis on patient-clinician interactions in the context of palliative medicine. The book focuses on a series of individual case studies of conversations that revolve, in each case, around one key critical term that is often evoked or understood differently by clinicians and patients. **Delirium Acute Confusional States in Palliative Medicine** [Oxford University Press](#) This volume provides palliative care physicians, specialist nurses, neurologists, psychiatrists, and other health professionals with a clear account of how to recognise and treat delirium, the most common neuro-psychiatric complication encountered by patients in the terminal phase of illness. **A Public Health Perspective on End of Life Care** [Oxford University Press](#) Worldwide, more than 50 million people die each year and it is estimated on the basis of the conditions leading to death that up to 60% of them could benefit from some form of palliative care. It is a public health challenge to ensure that these people can access good palliative or end-of-life care. Pursuing good population health essentially also implies striving for a 'good enough death' and a good quality of care at the end of life. Safeguarding a good quality of the end of life for patient populations for whom it is appropriate requires a public health approach. In most developed countries ageing populations that increasingly die from chronic diseases after a prolonged -often degenerative- dying trajectory

make up the public health challenges for palliative care. The very large baby boom generation will soon reach old age and can be expected to pose strong demands regarding the circumstances and care at their end of life. Only by applying a public health approach to palliative care (instead of individual patient perspectives), can societies successfully help to organize and plan end-of-life care in accordance with these aspirations. A Public Health Perspective on End of Life Care presents a synthesis and overview of relevant research and empirical data on the end of life that can bear a basis for a more systematic 'public health of the end of life'. The book focuses on population health, rather than clinical interventions or other aspects of individual health, and discusses studies using different methodologies (not only epidemiological research). The focus is on the quality of the end-of-life of populations, in particular from social sciences, environmental sciences, and humanities perspectives. **Palliative Care A Case-based Guide** Springer Science & Business Media A clinical case-based handbook has a role in general clinicians' practice of caring for patients with serious or life-limiting illness. The explosion of the field of Hospice and Palliative Medicine impacts all physicians and healthcare providers. Fellowship trained specialists graduate in greater numbers annually. These and more seasoned specialists are now certified by the American Board of Medical Specialties as subspecialists. Research in this field is expanding in scope and quantity, and peer reviewed journals devoted to this work are multiplying. Moreover, peer reviewed journals in primary care and other subspecialties of medicine regularly include papers that focus on end-of-life care, quality of life issues, and symptom management. Overall then, access to clinical information necessary to care for patients with life-limiting illness is not only essential, but also increasingly available. This case-based clinical book aims to help with the actual practice of caring for patients with life-limiting illness. Numerous texts and journals exist to provide the data to inform care, yet there remains a need to find practical points and information about the practical application of the principles of palliative care. Thus, we hope that the cases, key points, and practical tips will help health care providers who are not experts already in palliative care in the care of patients with serious illness and challenging problems. Some chapters follow one patient through the course of an illness to highlight the applicability of palliative care throughout the disease process. **Psychosocial Issues in Palliative Care** Oxford University Press "Psychosocial Issues in Palliative Care is for anyone working the field of palliative care, both in the community and in hospitals; this includes those in medicine, nursing, social work, chaplaincy, counseling, primary care, and mental health."-- Jacket. **Interdisciplinary Pediatric Palliative Care** Oxford University Press "We hope that the lives of all children will be filled with possibility, with open horizons and rainbows into the future. Children with serious illnesses, their families, and those who care for them, confront the realization that "not everything is possible," that despite dramatic scientific and medical advances, the lifespan of some children will be shortened. This threat of premature loss heightens the sense of time for children and families alike, and challenges clinicians to create new pathways of hope for them"-- **Oxford Textbook of Palliative Nursing** Oxford University Press The Oxford Textbook of Palliative Nursing remains the most comprehensive treatise on the art and science of palliative care nursing available. Dr. Betty Rolling Ferrell and

Dr. Judith A. Paice have invited 162 nursing experts to contribute 76 chapters addressing the physical, psychological, social, and spiritual needs pertinent to the successful palliative care team. Organized within 7 Sections, this new edition covers the gamut of principles of care: from the time of initial diagnosis of a serious illness to the end of a patient's life and beyond. This fifth edition features several new chapters, including chapters on advance care planning, organ donation, self-care, global palliative care, and the ethos of palliative nursing. Each chapter is rich with tables and figures, case examples for improved learning, and a strong evidence-based practice to support the highest quality of care. The book offers a valuable and practical resource for students and clinicians across all settings of care. The content is relevant for specialty hospice agencies and palliative care programs, as well as generalist knowledge for schools of nursing, oncology, critical care, and pediatric. Developed with the intention of emphasizing the need to extend palliative care beyond the specialty to be integrated in all settings and by all clinicians caring for the seriously ill, this new edition will continue to serve as the cornerstone of palliative care education. **Communication at the End of Life** Peter Lang GmbH, Internationaler Verlag Der Wissenschaften Communication is at the heart of any complete understanding of the end of life. While it is true that individuals physically die as a single entity, the process of ending an individual life is located within a complex system of relationships and roles connected and constructed through communicative processes. In this volume, top scholars from numerous disciplines showcase the latest empirical investigations and theoretical advances that focus on communication at the end of life. This multi-contextual approach serves to integrate current findings, expand our theoretical understanding of the end of life, prioritize the significance of competent communication for scholars and practitioners, and provide a solid foundation upon which to build pragmatic interventions to assist individuals at the end of life as well as those who care for and grieve for those who are dying. This book is suitable for undergraduate and graduate courses in Death and Dying, Communication and Aging, Health Communication, Life Span Development, Life Span Communication, Long term care, Palliative care and Social Work.
