Third Update on Adult Learning Theory

New Directions for Adult and Continuing Education, Number 119

John Wiley & Sons This *Third Update on Adult Learning Theory* follows two earlier volumes on the same topic, the first published in 1993 and the second in 2001. Only one topic, transformative learning theory, can be found in all three updates, representing the continuing developments in research and alternative theoretical conceptions of TL. Thanks to a growing body of research and theory-building, three topics briefly touched on in 2001 are now separate chapters in this third update: spirituality and adult learning learning through the body narrative learning in adulthood Also new in this update is a

chapter on non-Western perspectives on learning and knowing. New developments in two other areas are also explored: understanding the connection between the brain and learning, and how modern and postmodern ways of knowing are converging and are being expressed in social movements. The concluding chapter identifies two trends in adult learning theory for the twenty-first century: attention to context, and to the holistic nature of learning in adulthood. This is 119th volume of the Jossey-Bass quarterly report series *New Directions for Adult and Continuing Education*. Noted for its depth of coverage, *New Directions for Adult and Continuing Education* is an indispensable series that explores issues of common interest to instructors, administrators, counselors, and policymakers in a broad range of adult and continuing education settings, such as colleges and universities, extension programs, businesses, libraries, and museums.

Qualitative Data Collection Tools

Design, Development, and Applications

SAGE Publications *Qualitative Data Collection Tools* is a new and unique supplementary text that will guide students and new researchers to design, develop, pilot, and employ qualitative tools in order to collect qualitative data. An often-omitted subject in general qualitative textbooks, qualitative tools form the backbone of the data collection process. Students and new researchers are frequently left to create their own qualitative tools from scratch, an unnecessary hurdle in the qualitative research design process. Author Felice D. Billups has used her experience as a qualitative researcher, and in teaching and advising students about qualitative research, to develop the templates in this book as a starting point for readers conducting original qualitative research. The author briefly describes each method of data collection and offers readers suggestions for using and adapting the qualitative instrument templates within the text. Templates of interview protocols, focus group moderator guides, content analysis tools, document analysis tools, reflective questionnaires, diary and journal logs, and observational rubrics give the reader either a cut-and-paste solution for their own research or a starting point to design their own personalized qualitative tools. The first three chapters illuminate the qualitative data collection process and the role each type of qualitative tool plays in that process. The next six chapters provide detailed guides and numerous templates for each qualitative data collection method, covering interviews, focus groups, conversation and discourse analysis, observations, document analysis, field notes, journaling, and other reflective practices. A final chapter pulls together the multifaceted nature of qualitative research design and connects each tool back to the methodology to ensure trustworthiness and rigor in the data collection and instrument development process. Exemplars populate the appendices, offering readers concrete inspiration for ways to use and adapt the tools provided. If you have ever puzzled over how to best to design qualitative tools in order to guide and structure your qualitative data collection, or if you are embarking on your first qualitative study, *Qualitative Data Collection Tools* will give you a practical starting point to help make your qualitative data collection process easier and more organized.

The Oxford Handbook of Animal Organization Studies

Oxford University Press Just as climate change and environmental sustainability have become growing concerns in public discourse, so too have they become a persistent focus in business and organization studies. It is increasingly acknowledged that humans and animals do not dwell in separate spheres; rather, they are entangled in a number of commercial or organizational settings, and organization theory needs to respond more comprehensively to this more-than-human shift in outlook. Important questions continue to arise about the nature of contemporary organization and organizing practices: who are these for? Who benefits from the operation of increasingly globalized capital markets? What place is there for the nonhuman animals in all this organization? What place is there for multispecies companionship, solidarity, and mutual value creation today and in the future, if any? This volume brings together interdisciplinary work on human-animal relationships within business, management, and organization for the first time. It maps the contours of an emerging new discipline, here termed 'Animal Organization Studies', touching on the politics, theory, and empirical experience of multispecies life-worlds. Spanning a number of disciplinary approaches including critical geography, critical management studies, social studies of science, and human-animal studies, the volume highlights the contact points as well as the tensions in humanity's relationship with a range of animal species and habitats. It holds relevance for those investigating debates around humanism and its futures; environmental and sustainability matters; the experience of working with and on animals, and the future of animal consumption and production.

Digital Health Technology for Better Aging

A multidisciplinary approach

Springer Nature This book describes the multidisciplinary approach needed to tackle better aging. Aging populations are one of the 21st century’s biggest challenges. National health systems are forced to adapt in order to provide adequate and affordable care. Innovation, driven by digital technology, is a key to improving quality of life and encouraging healthy living. Well-designed technology keeps people empowered, independent, and mobile; however, despite widespread adoption of ICT in day-to-day life, digital health technologies have yet to catch on. To this end, technology needs to be effective, usable, cheap, and designed to ensure the security of the managed data. In the era of mHealth, mobile technology, and social design, this book describes, in six sections, the collaboration of polytechnic know-how and social science and health sectors in the creation of a system for encouraging people to engage in healthy behavior and achieve a better quality of life.

Crisis Standards of Care

A Systems Framework for Catastrophic Disaster Response: Volume 1: Introduction and CSC Framework

National Academies Press Catastrophic disasters occurring in 2011 in the United States and worldwide--from the tornado in Joplin, Missouri, to the earthquake and tsunami in Japan, to the earthquake in New Zealand--have demonstrated that even prepared communities can be overwhelmed. In 2009, at the height of the influenza A (H1N1) pandemic, the Assistant Secretary for Preparedness and Response at the Department of Health and Human Services, along with the Department of Veterans Affairs and the National Highway Traffic Safety Administration, asked the Institute of Medicine (IOM) to convene a committee of experts to develop national guidance for use by state and local public health officials and health-sector agencies and institutions in establishing and implementing standards of care that should apply in disaster situations--both naturally occurring and man-made--under conditions of scarce resources. Building on the work of phase one (which is described in IOM's 2009 letter report, Guidance for Establishing Crisis Standards of Care for Use in Disaster Situations), the committee developed detailed templates enumerating the functions and tasks of the key stakeholder groups involved in crisis standards of care (CSC) planning, implementation, and public engagement--state and local governments, emergency medical services (EMS), hospitals and acute care facilities, and out-of-hospital and alternate care systems. Crisis Standards of Care provides a framework for a systems approach to the development and implementation of CSC plans, and addresses the legal issues and the ethical, palliative care, and mental health issues that agencies and organizations at each level of a disaster response should address. Please note: this report is not intended to be a detailed guide to emergency preparedness or disaster response. What is described in this report is an extrapolation of existing incident management practices and principles. Crisis Standards of Care is a seven-volume set: Volume 1 provides an overview; Volume 2 pertains to state and local governments; Volume 3 pertains to emergency medical services; Volume 4 pertains to hospitals and acute care facilities; Volume 5 pertains to out-of-hospital care and alternate care systems; Volume 6 contains a public engagement toolkit; and Volume 7 contains appendixes with additional resources.

Evaluating Communication for Development

A Framework for Social Change

Routledge Evaluating Communication for Development presents a comprehensive framework for evaluating communication for development (C4D). This framework combines the latest thinking from a number of fields in new ways. It critiques dominant instrumental, accountability-based approaches to development and evaluation and offers an alternative holistic, participatory, mixed methods approach based on systems and complexity thinking and other key concepts. It maintains a focus on power, gender and other differences and social norms. The authors have designed the framework as a way to focus on achieving sustainable social change and to continually improve and develop C4D initiatives. The benefits and rigour of this approach are supported by examples and case studies from a number of action research and evaluation capacity development projects undertaken by the authors over the past fifteen years. Building on current arguments within the fields of C4D and development, the authors reinforce the case for effective communication being a central and vital component of participatory forms of development, something that needs to be appreciated by decision makers. They also consider ways of increasing the effectiveness of evaluation capacity development from grassroots to management level in the development context, an issue of growing importance to improving the quality, effectiveness and utilisation of monitoring and evaluation studies in this field. The book includes a critical review of the key approaches, methodologies and methods that are considered effective for planning evaluation, assessing the outcomes of C4D, and engaging in continuous learning. This rigorous book is of immense theoretical and practical value to students, scholars, and professionals researching or working in development, communication and media, applied anthropology, and evaluation and program planning.
