It is one of the most powerful low-cost 64-bit Single Board Computers available, as well as being an extremely versatile device. Featuring a fast, quad-core AmLogic processor, advanced Mali GPU, and Gigabit Ethernet, it can function as a home theater set-top box, a general purpose computer for web browsing, gaming and socializing, a compact tool for college or office work, a prototyping device for hardware tinkering, a controller for home automation, a workstation for software development, and much more. Some of the modern operating systems that run on the ODROID-C2 are Ubuntu, Android, and ARCH Linux, with thousands of free open-source software packages available. The ODROID-C2 is an ARM device, which is the most widely used architecture for mobile devices and embedded computing. The ARM

processor's small size, reduced complexity and low power consumption makes it very suitable for miniaturized devices such as wearables and embedded controllers. **PC Mag** PCMag.com is a leading authority on technology, delivering Labs-based, independent reviews of the latest products and services. InfoWorld** InfoWorld is targeted to Senior IT professionals. Content is segmented into Channels and Topic Centers. InfoWorld also celebrates

people, companies, and projects. **User's Guide and Program Maintenance Manual for the Extendable Computer System Simulator, Version 15, Instrumentation Package** A software Instrumentation Package for use with the Extendable Computer System Simulator, Version 15 was written to facilitate the reporting of systems performance statistics in discrete system simulations. The software package was developed in the course of modeling the TRIDENT Strategic Weapon Fire Control System. The Instrumentation Package (IP) complements the Extendable Computer System Simulation language by creating data structures for statistics collection and by providing the mechanism for initialization, update and output of the contents of these structures. The end result of the IP is a set of specialized output reports which describe the activity of a simulated computing system during a user specified time interval. This report outlines the user input procedures and report options available with the software package. Detailed descriptions of the statistical collection methods, the functions of the IP routines and the interactions of the IP routines are included. Methods for updating the IP are also delineated. The software system is operational on the CDC 6700 computer at the Naval Surface Weapons Center, Dahlgren Laboratory, and the IBM 360/91 computer at the Applied Physics Laboratory, Johns Hopkins University. **PC Mag** PCMag.com is a leading authority on technology, delivering Labs-based, independent reviews of the latest products and services.
