People keep track. In the eighteenth century, Benjamin Franklin kept charts of time spent and virtues lived up to. Today, people use technology to self-track: hours slept, steps taken, calories consumed, medications administered. Ninety million wearable sensors were shipped in 2014 to help us gather data about our lives. This book examines how people record, analyze, and reflect on this data, looking at the tools they use and the communities they become part of. Gina Neff and Dawn Nafus describe what happens when people turn their everyday experience—in particular, health and wellness-related experience—into data, and offer an introduction to the essential ideas and key challenges of using these technologies. They consider self-tracking as a social and cultural phenomenon, describing not only the use of data as a kind of mirror of the self but also how this enables people to connect to, and learn from, others. Neff and Nafus consider what's at stake: who wants our data and why; the practices of serious self-tracking enthusiasts; the design of commercial self-tracking technology; and how self-tracking can fill gaps in the healthcare system. Today, no one can lead an entirely untracked life. Neff and Nafus show us how to use data in a way that empowers and educates. **Wireless Home Networking For Dummies** *John Wiley & Sons* Wireless home networks are better than ever! It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly

The book provides an in-depth analysis of China's contemporary financial regulatory system, focusing on risks, regulation, and policies in practice. By drawing on public and private interest theories relating to financial regulation, the book contends that the controlled development of the banking sector, and the financial sector generally, has transformed China's banks into more market-oriented institutions and increased public sector growth. However, China's financial market and financial regulation have some inherent weaknesses and deficiencies. This book also offers insights into how this can be improved or adapted to minimize systemic risks in China's financial sector. This book tries to prove that financial regulation is not just a vehicle for maintaining efficient financial markets but a primary tool through which the Chinese government achieves its political and economic objectives. More fundamentally, according to the law and finance theory, strong market and vibrant judicial systems are needed to further modernize China's financial markets and market economy. Low vision is impairment that cannot be corrected by standard eyeglasses, contact lenses, medication, or surgery. That is 1 out of 28 and that is shocking. We also have a diabetes epidemic that can lead to diabetic retinopathy. Is the world ready? I don't think so. Are you aware of what this might mean to you?The purpose of this book is to let readers know that loss of eyesight is not a death sentence. Twelve people have shared their stories detailing how they met the enemy in their own lives and how they cope on a day-to-day basis. Some of them were born blind or became blind after a period of normal sight. Others have slowly lost vision and have learned to cope at different stages. Emotions play a major part in this experience and reading how others dealt with anger and depression helps the newcomers know they are not alone.The book began as a tribute to my husband who became instantly blind at the age of 10. When we married I entered his world and became a part of the low vision community. It is in Tucson, Arizona where I met the folks who graciously shared their stories with me. They detail not just the physical facts, but the emotional turmoil that took over when they were first told they had low vision that could not be restored with eyeglasses; or, they were blind or would gradually become so. Including Resources, Organizations and Definitions, along with the Stories makes this book useful to much of the population and particularly to those over the age of 60.I believe people who are already experiencing low vision will find this book valuable because of the sense of support they find in the Stories, and Resources they might not be aware of.The book should be in libraries where it will be one of a kind. Lions Clubs that focus their volunteer work with collecting and distributing eyeglasses and conducting vision screenings will benefit from this book. Many have members who are blind as does Tucson Rincon Lions Club. Sellers of vision equipment will want to stock this book. Ophthalmologists could buy in bulk to hand to their patients at the time of diagnosis or worsening eyesight. I think bookstores will want this on their shelves so it can be available to all. It will be available on Amazon as paperback, e-book and audio. Inspirational Stories of the Visually Challenged plus Resources might not be something you need, but think about someone you know, be it family, friend or co-worker. I think you will be thanked profusely. It would benefit someone considering purchasing this book if you would take time to write a brief review on Amazon and Goodreads so others know the value of this book. **Contemporary Management Linux Cookbook Essential Skills for Linux Users and System and Network Administrators** O'Reilly Media This handy cookbook teaches new-to-intermediate Linux users the essential skills necessary to manage a home or small business network.
